Repairing Time The Auto-Wheel Coaster

You'll find your Auto-Wheel Coaster doubly valuable at repairing time. It hauls material for repairing to every section of the farm quicker than by any other method—and it is small enough to slip through places where a team could not go.

But the best thing about the Auto-Wheel is that you don't have to worry about breaking it. Pile on half a ton of lumber. Pick up the tongue and see how light that half-ton load is. You'll be surprised at the ease with which it can be pulled. The

Auto-Wheel Coaster

is the finest play wagon in the world. It's the fastest boys' wagon on wheels—quick to start, and certain to win a race.

Send for a FREE six months subscription to "The Auto-Wheel Spokesman," our new magazine. It tells about prize contests. Just send us the names of three coaster dealers in your town, telling which ones handle the coaster wagon with the name "Auto-Wheel" on the sides.

A grain feed for COWS

EVERY dairy cow needs a feed ration that contains the proper amount of carbohydrates and protein. All authorities agree on that! Now then, alfalfa is the ideal roughage as it is the cheapest source of protein necessary for milk production. But alfalfa alone is not enough! For the very good reason that alfalfa contains *only half* the carbohydrates required. Hence the need of feeding SUREMILK with alfalfa. For it is a highly concentrated grain feed, rich in carbohydrates.

Feed SUREMILK and notice how it improves your milk production. Comparative tests prove that it gives better results (increased milk and improvement in the physical condition of the animal) than any single grain. Because it is a *mixture* of several kinds of grain—and therefore more palatable. It's easy to convert feed into money by following this formula: SUREMILK with alfalfa. It means healthy cows—profit-producers!

SUREMILK

"A Sperry Product"

REG. U. S. PAT. OFF.

A grain feed for HOGS

FOR hogs SUREMILK serves equally well because it supplies the grain feed that's essential. Alfalfa or skim milk provides the protein necessary for muscular development of the pig as well as an abundance of lime and phosphates for the bones; but it is necessary to balance this ration by feeding a highly concentrated grain feed like SUREMILK. It is rich in carbohydrates—an essential element in a fattening hog's ration—and has a greater feeding value than the best barley.

Hog-raisers have found that feeding SUREMILK builds the porkers up and fattens 'em up. They have found it economical, too—because it is highly concentrated in feeding value and does not bulk.

No less an authority than W. A. Henry says in his book, *Feeds and Feeding*: "Skim milk, rich in protein and mineral matter, should always be combined with a starchy carbohydrate, such as corn, barley, kafir, milo, etc., in which case it becomes one of the most useful of all available feeds for the pig."

Our own handbook, "Converting Feed into Money", treats this feeding question in detail. Full of practical profit-pointers—analyzes the food values of available feeds. Send for it now—it's yours without obligation. Simply fill in the coupon and mail today!

The American Farm Bureau Federation

CF making of farmers organizations there is no end, and many of them have caused much weariness of flesh. It sometimes seems that

when some fellow gets out of a job he proceeds to organize the farmers. Even the Labor Union is endeavoring to strengthen itself in the organization of a farm labor branch.

But still there are organizations and organizations, and many of them have come to stay because of the real benefit they secure to their members, in fact, to the entire country. The American Farm Bureau Federation is yet too new to predict with absoluteness its future, yet it has so many common sense ideas in its fundamentals that we feel fairly safe in predicting long life and usefulness for it.

In a recent issue of the Monthly Farm Bureau Record issued from the office of the secretary of the California Farm Bureau Federation we note a number of facts regarding the national federation:

The American Farm Bureau was organized at Chicago on March 3, 1920.

The national roll call on the organization date was over 700,000 members, and 28 states became charter members.

Since last March the states affiliated have reached 33 in number and the membership is over a million.

The official body contains 33 directors and the executive committee, 12 directors chosen from differ-

ent regional state zones into which the United States has been divided.

Its directorate and leaders are selected from actual farmers and men who sense the agricultural needs of the country.

The officers have appreciated the functions and service the national farm bureau should develop and have taken up projects which the states could not as units carry through.

The national federation has recognized the problems affecting the farmers and will consider in due time every feature in agricultural leadership.

With but a few months activity our national organization has established a leadership and prestige in the executive and legislative branches of the nation second to no other agricultural organization.

The American Farm Bureau Federation has canvassed the entire country for qualified men to carry forward and manage its important projects and departments and has established a financing program which will permit paying adequate salaries for such efficient help.

A bureau of transportation has been created to study the

basic problem of transportation and its influence on agriculture. Primarily the farmers pay 56 per cent of the freight in the country which at once intimates a basis for concern. —(Continued on Page 477).

California Cultivator Cup for Best Producing Pure Bred

Cow testing associations have been in dairy districts the most helpful activities manifested by various county farm bureaus. Los Angeles County bureau is conducting an annual test in its two testing associations. To induce highest effort on the part of the members there have been organized sections or classes amongst the members and cups have been offered. Amongst these cups is the California Cultivator cup shown above which is the prize going to winner of Class E for the highest producing pure bred cow in a period of at least nine months out of the 12 months beginning July 1 last. The winner of first place during the month of August was Burr Farm, Los Angeles. This with a Holstein making the magnificent showing of 78.8 pounds butter fat. The cows in the test during the month of August numbered 3089. The classes are as follows:

- Class A Highest herd average under 60 cows.
- Class B Highest herd average 60-150 cows.
- Class C Highest herd average over 150 cows.
- Class D Highest producing pure bred heifer first calving.
- Class E Highest producing pure bred cow.
- Class DD Highest producing grade heifer first calving.
- Class EE Highest producing grade cow.
- Class F Best 5 cows in class A herds.
- Class G Best 5 cows in class B herds.
- Class H Best 5 cows in class C herds.

Firestone

Buy a set of Firestone 3½-inch tires and discover the big feature behind their uniform service—perfect *balance*.

Firestone has devoted eighteen years to developing the *balanced* tire, giving light car owners more mileage at low cost—most miles per dollar.

The answer to getting more service and more *uniform* service out of all four tires is the Firestone 3½. It is more than thickness of tread or amount of rubber and fabric, greater cushioning or greater air capacity. It is proper *balance*—the way each of these component parts of a Firestone 3½ tire is made to co-ordinate.

Sales of this tire increased 96% for the first six months of this year. The result justifies the effort because the stamp of approval has been set by the public on the Firestone 3½—the *balanced* tire.

President Giffen Makes Statement

OW that the smoke of battle has cleared away and we know exactly the terms of the compromise made in Los Angeles on last Tuesday it is well that the growers should have a definite statement of the terms.

"This compromise was not satisfactory to us, but was accepted as being the best thing to do under all the circumstances. Some of the things that led to this settlement are now a matter of public knowledge; some cannot, at this time, be given out, and if there is anyone who feels dissatisfied we ask you to be patient until all of the facts can be told.

"The exact terms of the compromise are that we have agreed to sell to Chaddock & Co., Bonner Packing Co., American Seedless Raisin Co., Guggenheim & Co. and Rosenberg Bros., the firms whom we believe are responsible for the bringing of this suit, 20,000 tons of raisins at a price that will net them \$5 a ton if sold at our price. It is also agreed in this stipulation that we will sell to the California Packing Corporation a like amount of raisins; that we will do away with selling 'firm at opening' and 'guaranteeing against our own decline,' but this in no way changes matters, because we were already under contract with the California Packing Corporation for that amount of raisins, and we had by letter to the trade done away with the practice of selling 'firm at opening' and 'guaranteeing against our own decline.'

"Another matter covered in this stipulation is that our option in the growers contracts to purchase the crops of 1921, 1922 and 1923 shall not be exercised during the time that this trial is pending, but as this option does not expire until April 1, 1921, and the case will undoubtedly come to trial either in November or February, this point is not material and we would not have exercised it until April of next year at any rate.

Cost Growers \$100,000

"The stipulation further provides that the grower who was coerced into signing his contract should be released, but so long as practically all the growers have made affidavit that they were not coerced, this fact is unimportant. As we had already, by advertisement and letters, notified every grower that he would be released on the condition that he make an affidavit to the effect that he had been coerced, it is extremely important that every grower now will make that contention, so that the only thing of any consequence that we have conceded is the sale of 20,000 tons of raisins to the above mentioned firms at a price that will cost the raisin growers of this district \$100,000, or approximately 75 cents a ton against their delivery, and in view of this the attorney-general's office has agreed that the restraining order asked for in Judge Bledsoe's court would be dismissed.

"A statement given out in Los Angeles to the effect that by this agree-

ment 60,000 tons would be released, is not correct, as the 20,000 tons sold to the California Packing Corporation are the same raisins sold to them under a former contract, and the balance of the 60,000 tons was already controlled by the independent packers and had been sold to the trade at three cents above our price.

"The net result of this compromise is that the independent packers are to have 20,000 tons of raisins; the consumers of the country, in whose interests the suit was ostensibly brought, have not gained a single dollar; the California Associated Raisin Company has lost \$10,000 in money and \$1,000,000 worth of pride, but had the injunction been granted the Associated Raisin Growers would have undoubtedly lost \$25,000,000 in money and many million dollars worth of pride. Confronted with this choice, we chose the lesser evil.

Have Right to Manufacture

"The thing of importance is that we have not established a precedent that will need to be followed in other years, and that our contention today is exactly the same as it was before the compromise—that we have a right to manufacture and sell our own product, either in part or its entirety, being guided alone by the question of whether or not it is better to sell certain goods to our competitors or pack them under our own brand. In the last few years we have been pursuing the policy of packing all first class goods under our own brands and at times selling the damaged or poorer goods to some of our competitors, and this is the policy we expect to pursue on other crops in future years, as we believe that when the case is tried on its merits the courts will say that we are under no obligation to sell our raw products to our competitors, and this is the point that we consider absolutely fundamental.

"Judging by the experience of the old association, we do not believe it is possible for any organization which does not control its own marketing to exist for a long length of time. We are spending over a half million dollars a year in advertising, and believe this is absolutely necessary to keep up with the increasing production, and if continued the consumption of raisins can be increased in the next ten years to double our present production, and as a result untold wealth will be brought to this state. We do not believe that advertising can be done to advantage if it is done in the hit-or-miss fashion of advertising everybody's raisins without having any control over the brand. We believe it is of vital importance, if the advertising is to be continued, that the people who pay for it should own their own brand and manufacture their own raisins, for it certainly would not avail much to spend a half million dollars a year to advertise the Sun Maid brand of raisins if they all went out under a hundred different brands belonging to our competitors, who contribute nothing toward the advertising.

Growers' Rights to Sell

"Mr. Preston, in a special interview in the morning Republican, says that their fight is to see that the growers have a right to sell to whom they please, and it hardly seems necessary that there should be all this fight over that point when it is conceded by all parties. The packers whom Mr. Preston represents have been doing business in this community for 30 years; the California Associated Raisin Co. has been doing business for seven years; and two years ago, after an experience of 25 years with these firms and five years with the Associated Raisin Co., when every grower in the district had a perfect right to do as Mr. Preston suggests 85 per cent of the growers pleased to sell to us and 14 per cent pleased to sell to the aforesaid packers, and since that seven growers, who signed contracts with us, have claimed that they did so under an undue influence and have been released, so that evidently 88 per cent of the growers less seven growers are doing as they please when they deliver to us, and even if they have since changed their minds we believe that a contract is sacred and should be lived up to until it expires, even if its provisions seem irksome to the people who signed it, so that as far as we are concerned we expect to enforce these contracts in the future as we have in the past, regardless of Mr. Preston's opinion.

Only One Point of Difference

"Reduced to its final analysis, there is only one point of difference between the California Associated Raisin Co. and the independent packers—the growers profess to be grieved because we have taken advantage of the consumer and in order to prove their sincerity have sold their own raisins at a higher price. They also profess to be interested in the question of whether or not we 'guarantee against our own decline' and sell 'firm at opening,' and they pretend to be interested in the welfare of the jobbers who demand that we pack our goods in their private cartons that they may be further enriched at the expense of the growers.

"There is also much ado about the fact that a few merchants and bankers own some stock in this company, and they would have you believe that if we were organized on a strictly cooperative and non-profit basis our troubles would be at an end, and as evidence of their sincerity on this point it is only necessary to call your attention to the fact that Mr. John Preston is the attorney who has brought suit against the Milk Producers of this state, who are organized on a non-profit basis; but as a matter of fact, as proven by the compromise just made at Los Angeles, these men are not at all interested in any of these things, but are interested solely in seeing that we are forced to sell our raw product to them that they may become the selling agents.

"Stripped of all camouflage, this whole controversy is reduced to this simple proposition—are we or are we

not, under the laws of this country, under obligation to sell our raw product in the sweat box, or have we the right to manufacture and sell it ourselves under our own brand. This point is so vital, as we see it, to the future welfare of the raisin and dried fruit industries of this state, that we propose to fight either until we find that under the laws of this country we do have this right, or, failing in this, we propose to fight until the laws are so amended that the raisin and fruit growers of California can do what every other person in the country is doing—pool their interests for their own advantage. This compromise in Los Angeles has in no way dampened our ardor, and our policy today is exactly the same as it was a week ago—that we do not intend to sell our raw product to the packers until the last court in the land has decided that we are under obligation to do so. If, at that time, it seems feasible to run an organization on the terms suggested by Mr. Preston, we will do so, but until then we will run it according to our own judgment.

"And, finally, this is but a continuation of the same old fight and the question is whether or not the packers who now, through the pathetic voice of John Preston, plead for the right to live, and who for years sacrificed the industry for their own selfish advantage, denying the growers the same right to live because of their self-claimed superior ability, are to be constituted the divinely appointed selling and manufacturing agents for all time to come of the raisins and dried fruits of this state. Our answer to this question is that this right is not a divine one, but one that must be determined by the growers themselves, and so far as we are concerned we are willing to leave the question in their hands and abide by their decision, as Mr. Preston says, 'let the growers sell to whom they please.' The question of whether or not we sell the packers a few thousand tons of raisins in itself is unimportant, but the question of whether or not we have to sell these raisins is all important and determines, in the end, the question of whether or not a cooperative organization is worth while, for as we have said many times before, whoever controls the selling of our products controls the destiny of the raisin growers."

PROTECT DEFOLIATED TREES FROM SUNBURN

"Many trees are being defoliated by grasshoppers and by the red spider at the present time," says T. D. Urbahn, field entomologist of the state department of agriculture. "Besides preventing the development of fruit wood, this defoliation stops circulation of sap and exposes the tree to sunscald which may cause permanent injury to the trunk and framework of the tree. The defoliated trees should therefore be thoroughly whitewashed and the tops sprayed with whitewash at least on the south and west exposures. Whitewash formula—Lime 15 pounds, tallow 2 pounds. Water to make it flow well and where grasshoppers are still present add a couple of pounds of bitter aloes."

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

EDITORIALETTES

President Roeding and Secretary Paine of the state fair association are both busy doing the Los Angeles Livestock Show. J. I. Thompson and other northerners are also looking in. But more aristocratic than these are the quality livestock that have gathered from all portions of the Coast and the Southwest to win the money and the championships offered. Practically every class of livestock is represented in the exhibits whether it has four legs or wears feathers. Considering the period of the year the showing of poultry is exceptional.

* * *

The show began on Saturday last and the Cultivator representatives have been there and have been observing the placing of the ribbons and even some of the championships, but it is impossible this week to get the photographs and engravings made. Next week, however, Mr. Hughes will touch upon the dairy classes, Mr. Royce the beef, Mr. Bennett and Mr. Hilt the swine, Mrs. Koethen the poultry and pigeon show.

* * *

Note in the livestock department this week that there have been some other fairs and shows held in this state. Both Fresno and Kings Coun-

ties are representative rich producing sections of California and there were held at Hanford and Fresno district fairs at which the products displayed will inspire to better effort those now engaged in food production and give a knowledge of the capacity of those sections as few other events could. Kings County is the Poland China county of the state. Both sections are noted for their raisins, prunes and apricots, their peaches and other fruits.

* * *

Last week's paper, in which we referred to some of the difficulties confronting the farm press, was hardly in the postoffice when it was announced that a farm paper which has been published as a weekly for nearly a half dozen years cuts its service in the middle or at least reduces from a weekly to a semi-monthly. This is greatly to be regretted in these days when agriculture needs all the aid which can be supplied. And the farm press has been one of the biggest factors in disseminating information gathered by departments of agriculture, by state universities, farm bureaus and its own staff.

* * *

But as much as these forces are needed, a bit of retrospection compels the conclusion that the farm paper must travel a rocky road. There are today two papers which have been rendering service to California farmers for over 40 years, of which one is the California Cultivator, in Los Angeles. Neither of these papers has ever had an "angel" to tide over the difficult days of becoming established. It has simply been through hard knocks and continuous hammering to make the papers support themselves and serve the farmer that they have come through to success. The writer of this hasn't sufficient fingers and toes on which to count over farm papers which have come and gone in this state in the score of years he has been endeavoring to serve the Cultivator.

* * *

It costs money under normal conditions to produce a paper of the type of the California Cultivator; under present conditions when white paper has advanced far more than the 300 per cent claimed as the limit on most productions and ink and labor both have advanced, there is temptation to reduce, but the Cultivator intends to continue rendering the same service to the farmers of California which it has in the past—and better.

* * *

Touching upon the official organ, which subject was referred to on this page of last week's Cultivator, we note the Prairie Farmer, published in Chicago, takes identically the same attitude in that an official organ is not especially valuable for publicity purposes. It refers to the fact that in all probability there will be mistakes made by the management: "No organization can hope to remain free from mistakes; no set of officers can do the right thing always. The members are entitled to the truth about these mistakes. Such a paper is run by the officers of the organization. They are not going to print anything about their own mistakes. If an incompetent set of officers gets control, the official organ is a powerful weapon with which to keep themselves in power. Such a thing has happened often in the past, and it will surely happen in the future with any official organs which the farm bureau federations may establish. The best guarantee that the farm bureau federations will go right is full, fair news reports

and constructive criticism in the independent farm papers." And the Prairie Farmer is one friend of the farm bureau movement.

* * *

Saturday of this week, October 9, is Fire Prevention Day, and this because of a proclamation by the governor of California and because of the need of the people of this state pausing a moment and considering the awful loss to this country through the wiping out of billions in value through fire every year.

* * *

Wonderful state, this. In the prune and raisin drying sections and in the great valleys where the wheat still lies scattered in sacks over the field there has been no rain; there is none wanted. Yet up in Humboldt County the weekly summary of the weather bureau reports: "Humboldt County ranchers and stockmen are elated over the copious warm rains, which have helped the root crops raised so extensively for stock feed and started the grass on the ranges."

* * *

One of the most valuable lessons on cooperation is being taught by the poultrymen of California. Contrary to Middle Western practice, the poultry industry in California is not an adjunct to the diversified farm, but has become a specialized business followed exclusively, at least such is the case with the greater number of egg producers. This specialization has made close business management necessary during the last few years of high feed prices and has resulted in a well organized cooperative marketing movement. From a recent circular letter to members, Manager Stanley of the Poultry Producers of Southern California says: "We are now shipping a car of eggs a week to New York. The last car shipped sold there this week at 90 cents per dozen. This car was shipped September 23 and was billed at the market price of that date, 69 cents. The shipment was made by express; the express, war tax, New York drayage and selling charges amounted to approximately 13 1/2 cents per dozen. A good margin of profit will be shown by the sale of this car. On the other hand, fluctuations in the New York market sometimes do not admit of a profit on such a transaction, other than that derived indirectly from the stabilizing of our local market by the removal of its surplus." And this last, that is, the stabilizing of the market, is the one big accomplishment of all cooperative movements.

* * *

Away back in 1914 a reader of the Cultivator sent in to the household department a recipe for the making of some deliciousness—perhaps it was a pie, or something, dear to the heart of man. This recipe was cut out by a housewife and tried with such success that it was repeated many times. Ultimately it was lost. A few weeks ago she wrote to the household department asking for reprinting of that recipe without knowing date of its issue. It was impossible to locate it. However, a note in the columns of the household department some two or three weeks ago requested any subscriber who had preserved the recipe to send it in for the benefit of the inquirer. The paper was barely off the press before old time egg stained clippings began returning from subscribers in all sections of the state. They came by dozens, even by scores. The moral is, "Preserve for future use the good things which appear in the columns of the Cultivator. There is

a lot of this worth preserving stuff, especially in the household department.

* * *

We had in last week's issue of the Cultivator an article regarding the San Diego County fair. It was written by Robert R. McLean, who is connected with the agricultural service department of the First National Bank of San Diego. There are many of our larger commercial and other institutions these days which realize that the largest and the surest profit is not that which comes from the immediate sale or transaction but from service rendered toward the upbuilding of those who may be clients of the institution. The Southern Pacific Railroad once conducted a series of valuable demonstration train excursions simply because "The greater your tonnage production, the greater our tonnage of freight." The bank which can encourage the farmer to use the larger producing pure bred or better cultural operation is encouraging heavier deposits.

* * *

At the state fair the University of California had a remarkably fine showing of its various agricultural activities. One building was devoted to dairy products; another to general farm crops and horticultural products; another to pure bred animals used in connection with the farm school at Davis. This is referred to now to call attention to the admirable arrangement of the stalls or, rather, there were no stalls and the animals were displayed broadside to the passer-by. The usual method of display is in narrow stalls where it is impossible for the visitor to get any satisfactory look at the animal. To be sure, it takes considerable space to let a big draft horse or Shorthorn bull stand full length, but they are there to give information to those who are attending the fair, and this certainly can only be given where the face of the animal may be seen, and as well its other good points, in a broadside view.

* * *

The citrus growers who would sleep soundly during December and January nights have probably secured orchard heaters and have orders in for distillate or other fuel. Practically all our citrus orchards are in the "frostless belt" but a few heaters may aid in maintaining that claim. This is also our off year, that is, we are entitled to an entirely frostless winter season; but again, let's be prepared. Heaters and fuel cost money but oranges—well oranges are oranges for we note an occasional sale in auctions as high as \$11. And lemons—lemon trees—are well worth preserving from the shock of cold. It will not be long till the lemon market will read differently.

* * *

Now the department of agriculture is recommending the production of gas from straw. The department is producing on a small scale on an experimental farm at Arlington, Virginia, by destructive distillation of rye, wheat and oat straw, a gas which has proved exceptionally attractive for illuminating, cooking and other purposes. Well, if 18 years is the earth's gasoline limit and if gas wagons are to increase at the present rate, something must come to give us power, but here's hoping it is something besides straw. We need that for humus.

* * *

Cotton planting was really on an experimental basis in the Perris Valley of Riverside County this year, but results have been so satisfactory that acreage will be largely extended another year.

Concerning the College of Agriculture

If there is one institution in California of which her people are more proud than another it is the University of California. In prestige it is becoming one of the country's foremost; likewise in number it is becoming, not only the country's, but the world's, greatest. We are all proud of its growth and we naturally object to any attack upon it. This very interest impels us all to watch it closely. And this means a greater and a better institution. Through Mr. Royce and others there have appeared in the California Cultivator a number of articles which have called attention to some angles of the university work which may call for slight changes, at least, such is the idea of those who have contributed these articles. This has caused other friends of the university to come back with a showing of wherein the university is succeeding. Some of these letters have been given, and the next succeeding article touches our university from the standpoint of one of the present year's class.

By L. Barnard, U. C. '20

HAVING read an article by R. P. Royce in the California Cultivator of August 28, 1920, I gather that he believes the college of agriculture at Berkeley is not fulfilling the needs of the California boys who wish to study agriculture, or is not of as high rank or as efficient in turning out trained agriculturists or farmers as Oregon agricultural college, or similarly conducted agricultural colleges. I also note with apprehension several statements made by the various young men who contributed to his article, which are untrue, possibly due to the fact that only one side is clearly understood, that of O. A. C. Having attended Davis farm school for a year, then O. A. C. for a year, and the college of agriculture at Berkeley for two years, completing my course here this Christmas, I feel that I am in a position to state a few plain facts that might clear up any misinterpretation in regard to the article written by Mr. Royce, which to an outsider might be misconstrued so as to injure the future reputation of our agricultural college.

The following points were taken from the letters of students which were printed and which seem to me unjust to the California college of agriculture and a blot on its good name unless some loyal California agricultural student takes the time to dispute and explain them for the readers of this paper throughout the United States:

Credits and requirements are stricter at U. C.:

I agree; but that also indicates a very high standard and more credit to the men who buck such odds and come out on top.

Davis does not find vacation work for students:

I have worked at Davis four consecutive summers, omitting the two summers in the army, and have always found the men in charge of the various divisions more than obliging to place men on farms. In fact, while attending O. A. C. I was made a higher offer for labor in the division orchard than O. A. C. could offer me.

At U. C. classes are so large that instructors are not in personal touch with students:

Our enrollment in the college of agriculture at the present is about 550. When I attended O. A. C. the enrollment was 1,500. Our agricultural buildings are separated from the university proper, so that in reality I find that I get more personal contact here with the professors than I did at O. A. C.

No democracy at U. C.:

This is 100 per cent wrong. I find more democracy here at the college of agriculture than I did at O. A. C.,

considering the influence of environment, such as the more cultural courses given in the various other colleges on the campus.

It costs \$400 to \$500 more to live at California than at O. A. C.:

This is also 100 per cent wrong. I find that it is just about the same, and some months much cheaper here, due to the absence of snow and rain and their effect on clothing purchased and soiled. I would say this depended entirely on the man and his source of finances. Of course, the fellow with a gold mine will find many chances here to spend if his money burns his pocket to that extent.

The man who works his way through U. C. is looked down upon:

This is another injustice to students of California. I have worked for my living and college expenses at all the above mentioned schools and, to be fair to them all, I have always been treated well and as an equal. Figures have just been released at the controller's office which state that 48 per cent of the total enrollment in all the colleges of the University of California, which is 10,000, are self supporting. Among the agricultural students I am sure the percentage is much higher than this.

It costs too much to hold up your own socially:

Once more, I believe this depends on the man and his source of finances.

The students at U. C. dress too expensively, which does not promote democracy:

For the benefit of the person who contributed this, I enclose the following information: 1. The women students of U. C. have gone on record in print as against flowers at dances, taxi service paid for by fellow students, immodest and expensive clothing, everyone home from dances by 2 a. m. 2. Twice a month the senior men and women hold informal dances to which men are not welcome except in cords. Flannel shirts have been urged for this affair. 3. President Barrows said, "As long as a man has clean clothes, a shine and a clean shave, he is dressed well enough for the University of California."

I will now tell why I decided to take my degree in agriculture from my home state university.

When I graduated from high school I worked on a Lima bean and sugar beet ranch in San Diego County for a year. While there I became so saturated with the practical side of farming that I enrolled at Davis farm the following year for a two year course in agriculture.

After I had completed a year at Davis I was firmly convinced that my education was too much practical and no theory. I therefore, in company with another student of the same frame of mind, started south through the state, working here and there on various ranches, mainly with the idea of picking up experience and financial means for future study. After working a year in this manner I decided I wanted a broader education in agriculture. I therefore forwarded my Davis credits and high school credits to U. C. for consideration as to entrance as a sophomore. The answer was that I would be admitted as a freshman, as the Davis farm work was not equivalent to university credit towards a degree. I then wrote to O. A. C. for similar information, and

I was admitted as a sophomore, as they recognized Davis work as equivalent to their college work.

However, I did not expect to graduate from O. A. C. as, after staying a year at that institution, I would be a full fledged junior. Accordingly, at the close of my sophomore year at O. A. C. I returned to California and worked in the pomology division at Davis. During that summer I wrote to Oregon for a record of my work there and my status, which stated I was a junior, etc. I turned these in at U. C., asking for admittance as a junior in the college of agriculture. I was refused junior standing because my Davis work was not equivalent to university credit, and also one or two O. A. C. courses were not rated as equivalent to similar courses given at U. C. (This upholds my statement of the high standard and thoroughness of the college of agriculture.)

Notwithstanding my setback as to standing and that I would be only a sophomore, even though I did rank as a junior at O. A. C., I was more firmly convinced that a college with such a high standard was well worth the extra year and the additional expense and labor it took to finally secure the training I was after. I also wanted to graduate from my home university, and to study agriculture under California conditions and in the state I expected finally to settle in. I accordingly entered U. C. and shortly after spent 13 months in the army in various parts of the United States. And during these 13 months of moving about I learned to appreciate my home state and the college of agriculture more, both from the good words I heard spoken of them and more impressively by comparison through observation.

Upon my discharge I returned to U. C., where the faculty members and officials and everyone concerned came more than half way in their efforts to get us fellows who had taken out leave of absence, back into our classes and work with the minimum amount of loss to us.

I therefore submit the above with all due respect to O. A. C., Mr. Royce and his contributors, but above all I hope I have cleared up any doubts in the minds of prospective U. C. agriculture students, as well as everyone who has a loyal feeling toward one of the best agricultural colleges in America, and one that we, the people of California, can call Our Own University.

Another who takes a different view is A. L. Wisker of Grass Valley. Mr. Wisker writes:

By A. L. Wisker

I am much interested in the article by Mr. Royce relative to the Oregon college of agriculture, and particularly in the comparisons drawn between that institution and the University of California.

The several persons quoted gave a number of logical reasons why a student seeking instruction in agriculture would prefer going to Corvallis. Among these, the fact that at Corvallis the student finds constant opportunity to put theory into practice appeals to practical minded men, and this condition is a very great factor in getting results from agricultural instruction.

In agricultural education demon-

stration in indispensable. Without it, the major benefits of instruction are lost and we produce a crop of agricultural graduates who excite the derision of practical men until they learn how to connect their theoretical instruction with the actual operations of farming.

I hope to live to see the college of agriculture removed from Berkeley and located where the important agricultural pursuits of our state may become familiar to the students through field application of classroom theories.

And I further hope to see something else: I hope to see such a house cleaning at the University of California that near-Bolshevism, anti-Americanism and other abominations of a stinking modernism will no longer be linked with the name of that institution in the headlines of the press and that it may become famous for that type of higher education in which character building is considered the keystone of the arch. No other function of any institution of learning is half so important as building up the character of the men and women who graduate from its halls, and any scheme of education which stresses mental and ignores moral development can but result in failure.

Californians hope to see a decided change for the better in the conduct of university affairs and will hail the day when this institution shall prove itself worthy of its great mission to the people of this commonwealth, but the citizens of this state are in no temper to permit a lowering of ideals until they decline to the level of the German universities. A new policy is needed that will restore popular confidence and respect and command popular support.

WINDBREAKS, AN OBJECT LESSON

"A few hours' travel, either by train or motor, across any of the fertile valleys from Mt. Shasta to Los Angeles will soon convince the most reluctant of advocates of the moral, spiritual and physical value of windbreaks," says Director Hecke of the California department of agriculture.

Across these many fertile valleys sweeps a hot wind, a veritable "sirocco" that dries the grain and burns the immature fruit. It is notable that upon reaching a district wherein windbreaks have been systematically placed the temperature is much lower and the general aspect of the surrounding lands more pleasing and inviting. Who can say that much of the agricultural success of some of our fairest counties may not be attributed to the persistent and far sighted work of those who saw future prosperity in the "windbreak?"

One aggressive, thinking farmer in Yolo County told the writer that now he had a good flow of water from a drilled well he would immediately set out to plant windbreaks on his quarter section. He said, "I have not succeeded with the chickens for lack of shade. My dairy cows suffer for the same reason." And a look at his otherwise homelike ranch would convince anyone that he, too, and his family would find life easier if there were trees to temper the heated winds which sweep the valley garden spots of the state.

In the south such work is being done along systematic and methodical lines, and if more generally adopted by the different counties would in a large measure enhance land values and crop returns, where now only indifferent, average or hazardous results are expected.

This movement for adequate windbreaks has long been agitated by the state forester and the California department of agriculture is in fullest accord and sympathy with the work which has so great an influence on the agricultural activities of our state.

Agricultural News Notes of the Pacific Coast

Northern California

Rice binders are busy in Colusa County fields.

The Almond Growers Exchange has fixed prices for the 1920 crop.

Tuolumne County expects to ship some 70,000 boxes of apples this year.

Several small cattle sales have been made in the Livermore Valley of Alameda County.

The Hanks Exchange center of Eldorado County has installed a five ton cattle scales at Pleasant Valley.

Hop pickers have been paid \$1.50 per hundred; it is reported that in some yards they have struck for \$2.50.

The Sonoma County farm bureau has passed resolutions recommending poll tax of \$4 on all resident non-citizens.

Arrests of 12 rice growers in Butte County have been made for permitting water from their fields to overflow highways.

Wool pooled by members of the Mendocino County farm bureau has been sent to warehouse at Chicago for grading and marking.

Fifty Poland Chinas have been purchased in Sacramento County for shipment to the director of agriculture of the Philippine Islands.

A survey of the orange groves of northern Sonoma County has just been made by W. L. Benedict of the federal department of agriculture.

The hay crop of the Livermore Valley is reported at far below normal this year, only about 7,500 tons, less than half the usual output.

President Stephens of the Pacific Rice Growers Association estimates this season's crop at 3,400,000 bags, some 200,000 bags more than last year.

Some growers of wine grapes in the mountain districts of Sonoma and Mendocino Counties have just made sale of their late ripening crops for \$100 per ton.

There was a record attendance at the annual picnic of the Livermore center of the Alameda County farm bureau held the last week in September at Cresta Blanca.

Farm bureau hog auctions will be held at Davis, October 13, for Sacramento, Solano and Yolo Counties; at Durham, October 14, for Butte, Sutter, Glenn, Colusa and Yuba Counties.

A meeting of rice growers at Bliggs, Butte County, was held September 27 to discuss the marketing situation. It was attended by 200 growers. Indications seem to point to a five cent price.

Farm Adviser Weinland of Sonoma County is making arrangements with members to do some test work in co-operation with the deciduous experiment station at Mountain View, Santa Clara County.

There is some late rice in the Wilows district of Glenn County that will extend the irrigation season to as late as November 1. It is now thought that all the rice crop will be matured. Many fields have already been drained.

Meetings of the Tehama County farm bureau will be held at Antelope, October 12; Dairyville, 13; Bend, 15; Richfield, 18; Corning, 21; Los Molinos, 25; Proberta, 27; Liberal, 28; Manton, 29; Bowman, 30; directors meeting, 23, at 10 o'clock.

Central California

Santa Cruz County will expend \$75,000 for bridges and repairs.

The Merced County farm bureau has raised its annual dues from \$2 to \$5.

It is stated that 2,000 cotton pickers will be needed in the Bakersfield district.

A large pack of fancy figs is being sent out from Clovis, Fresno County, this year.

The Farmers Union at Patterson, Stanislaus County, has decided to build a warehouse.

Many entries of livestock have been made for the fair to be held at Chowchilla, Madera County.

A meeting is soon to be held in Monterey of those interested in construction of Pacheco Pass highway.

The fall meeting of the California Fruit Growers and Farmers will be held at Fresno, November 9-12.

The state college of agriculture estimates that 200,000 acres will be planted to Mariout barley in California this year.

Following merger of fig growers interests in California Peach Growers, two new directors and two new trustees have been added.

In the hog auction held at Turlock, September 21, by the California Farm Bureau Marketing Association, two carloads brought total of \$4,650.

Directors of the Turlock and Modesto irrigation districts are making inspection of the Snow Mountain dam on the Eel River in Mendocino County.

The federal bureau of crop estimates places the California almond crop at 60 per cent of normal, which the Almond Growers Exchange considers too high.

The San Luis Obispo branch of the California Cattlemen's Association entertained 2,000 stockmen and friends at a barbecue on Saturday, September 18, at Paso Robles.

Injunction suit against the Raisin Growers has been dismissed and compromise effected whereby the Associated turns over some of its raisins to independent packers.

Modesto County will hold its annual farm bureau picnic on October 30. It will be in the form of a tour through the Delhi Colony, ending with picnic on the Merced River.

Some good reports have been received from grapes shipped to Eastern markets in stock cars. Much complaint is heard of condition of refrigerator cars when the shippers do manage to secure them.

Dairymen of Tipton and Tulare met in Tipton last Saturday on the call of the Tulare County farm bureau to consider affairs of the cow testing department. 1,000 cows have already been signed up in this testing unit.

Beekeepers of Santa Cruz County held meeting at Watsonville recently to discuss foul brood situation. Several beemen from northern Monterey County were present and told of the handling of inspection in their county.

Kern County farm bureau meetings will be held at Delano, October 11; Old River, 12; Wasco, 13; Rio Bravo, 14; Edison-Fairfax, 15. Farm home department meetings will be held at Shafter, October 12; McFarland, 13; Arvin, 14.

Southern California

Ventura reports record attendance at county fair.

The walnut harvest is rather late in Orange County.

Beaumont, Riverside County, is planning an Apple Day.

Machinery is being installed in the new cotton gin at Perris.

Large exhibit of livestock was made at the Ventura County fair.

Bean threshing is about completed in the Chino district of San Bernardino County.

Victor Valley will make exhibit of products at the Riverside fair, October 13-19.

Independent ginners at Blythe, Riverside County, are reported to have cut prices 25 per cent.

The new sorghum mill at Costa Mesa, Orange County, is turning out 300 gallons of syrup per day.

The Claremont Pomological Club held its first fall meeting at Ganesha Park, Pomona, September 25.

The Avocado Association holds semi-annual meeting and luncheon at Hotel Pasadena today, October 9.

Sugar beet growers of Orange County met at Los Alamitos, September 29, to discuss terms for next beet contracts.

Cotton growers state that they can ship cotton cheaper to New England by way of San Pedro than by New Orleans.

Careful check is being made by the Riverside experiment station in walnut orchards treated for control of walnut worm.

Fifty new members have just been added to the Santa Ana Walnut Growers Association. That association now numbers 550.

Lettuce growers of Westmoreland, Imperial County, are suffering serious depredations from gophers and grasshoppers.

Date growers of Coachella Valley are protesting against thefts of motor parties who like to "pick dates with their own hands."

Bean threshing in Orange County shows only about a half crop. The hot weather in July and August is considered the cause.

Because of delay in opening gin at Brawley the "News" reports 75 to 150 bales of long staple are being sent to El Centro for ginning.

Two carloads of date palm offshoots have just been received in Coachella Valley from Egypt. The shipment cost Uncle Sam some \$23,000.

Ruling has been issued by the state department of agriculture that wormy and defective apples may now be sold by growers at their orchards or wayside markets.

A cooperative organization for the marketing of onions is to be formed within the membership of the new Coachella Valley center of the Riverside County farm bureau.

Five and six sacks of beans to the acre is reported as the average from the Harperville section of Orange County. This is attributed to the hot weather and to "nimble toes."

A field meeting and soil moisture demonstration was held for the benefit of citrus and walnut growers at Duarte on September 21. It was given by the Sierra Madre-Monrovia-Duarte farm bureau center. Prof. Nelson was the speaker and demonstrator.

The Coast and General

Arizona's state fair will be held at Phoenix, November 8-13.

Wasco County, Oregon, farm bureau members buy distillate cooperatively.

Potato shippers of Yakima Valley, Washington, have formed an association.

American Fruit and Vegetable Shippers Association will meet in Chicago, January 19-21.

Turkey is now exporting shelled walnuts in considerable quantities, largely to the United States.

An Oregon rancher is advertising that he will pay five cents apiece for rabbits killed on his land.

A large steam drying plant for prunes is being erected by a grower in Marion County, Oregon.

Prizes amounting to \$500 were given to winners in the butter scoring contest at the Oregon state fair.

The exports of onion seed from the Canary Islands amounted to about 53,000 pounds, valued at \$87,000.

The annual meeting of the Oregon Horticultural Society will be held at Eugene the latter part of November.

The state fair board will ask the Oregon legislature for appropriation for erection of new buildings in time for the 1921 fair.

Louisiana's sweet potato crop is larger than last year and showing excellent condition. Early stock began moving late in August.

Loganberry growers in the region near Port Angeles, Washington, received 12½ cents a pound for their fruit for canning purposes.

Five hundred acres in the Caledonia marsh in Klamath County, Oregon, are to be put into mint. This is part of a 1,600 acre planting made by one company.

The island of Madagascar has this year planted to Lima beans some 57,000 acres. The crop is expected to be marketed in France, England and the United States.

Orders have been issued from the Commission on Car Service, Washington, D. C., that refrigerator cars may be held only five days after delivery. Violations will be punished by withholding future deliveries. This order was made to help out the shortage.

Official estimate of Italian silk production for 1920 amounts to 59,500,000 pounds of cocoons against 43,500,000 pounds for 1919. This is an increase of 37 per cent over the previous year. Raw silk is Italy's most important export to the United States, and larger shipments are indicated for the coming year.

Steamship agents are assuring apple growers of the Yakima Valley of Washington that they can ship apples to Europe as cheaply and quickly as by rail to the Atlantic seaboard for re-shipment. It is stated that the apples can be shipped under refrigeration from Seattle to London and Antwerp in 40 to 45 days.

At the reclamation congress held in Seattle, Washington, the last of September, 600 delegates were present from Washington, Oregon, Idaho, Montana, Wyoming. At this meeting was launched the Northwestern Reclamation League to work for reclamation of all Western arid and semi-arid lands, with the Columbia basin project as its biggest task. James A. Ford of Seattle was made secretary of the league.

Remember the Horse-Shoe Tread

Grips the Road Like a Giant Horse Shoe

Driving a car equipped with Horse-Shoe Cord Tires is a relaxation. You know your tires will not skid.

The non-skid tread of this distinctive cord tire takes hold of the road with a stubborn grip that makes driving safe even on slippery pavements in cars that are notorious "skidders."

Each little shoe in the Horse-Shoe tread forms a near-vacuum that cleaves noiselessly to the road after the triangular edges of the tread have cleaned and scraped away the moisture.

Many motorists have told us that the tread of the Horse-Shoe Cord Tire is as effectively anti-skid as tire chains, except in deep snow or mud.

We request that you let the nearest Horse-Shoe dealer give you a demonstration of Horse-Shoe performance on a really slippery pavement.

RACINE HORSE-SHOE TIRES

Cultivate with Dynamite

When the ground is dry and hard in the fall it can be loosened and mellowed with small charges of

HERCULES FARM DYNAMITE

From three to four shots placed around each tree just outside the foliage line will break up the hard soil and prepare it for the winter and spring rains.

Try Hercules Farm Dynamite this fall. Its use will insure a good spring growth and a heavy fruit crop next summer.

Send for "Progressive Cultivation". You need this book for it tells you all about the uses of explosives on the ranch or in the orchard—how to plant trees, cultivate bearing orchards, clear land, subsoil, and do many other things with the help of Hercules Farm Dynamite.

Send in the attached coupon *today*—and this book will be sent you free of charge.

Hercules Farm Dynamite is for sale by
leading Hardware and Implement Dealers.

HERCULES POWDER CO. 1033 Chronicle Building, San Francisco, Cal.

Gentlemen: Please send me a copy of "Progressive Cultivation."

I am interested in dynamite for

Farmers and Fruit Growers Convention to be Held at Fresno

By Cultivator Staff Writer

WITH indications of a very strong program, dealing with subjects of vital interest to agriculturists of California, comes announcement that the state department of agriculture has accepted the invitation of the directors of the Fresno chamber of commerce to hold the fifty-third State Fruit Growers and Farmers Convention at Fresno, November 9 to 11, inclusive. This announcement will be welcomed by the growers of the San Joaquin Valley as well as by many growers from all parts of the state who will undoubtedly avail themselves of this opportunity to visit the land of the raisin, fig and peach.

These conventions are held annually under the auspices of the state department of agriculture and are serving the admirable purpose of crystallizing the agricultural thought of the state. Each convention during the past few years has seen the beginning of some movement for the improvement of agriculture which has been a benefit to the state as a whole. During the forty-ninth convention at Napa laws relating to the standardization of fresh fruits were discussed, and we are now operating under the very successful administration of these laws.

At the fifty-first convention at Riverside the Western Plant Quarantine Board had its first meeting. During this week representatives of all the states west of the Rocky Mountains, British Columbia, Lower California and the Territory of Hawaii, met and perfected a permanent organization.

The result of this conference has been far reaching and of great value to the farmers of California, as the efforts of these men have undoubtedly done much in preventing the spread of plant pests from one district to another and the introduction of others from outside territory.

Last November at Chico the farmers and fruit growers at the convention decided that the time was ripe to organize an Agricultural Legislative Committee. This committee is now in active operation and many questions will undoubtedly be discussed at the Fresno meeting which will be turned over to this committee to insure the proper legislative action.

The recent threatened disaster to the raisin growers company and other activities which indicate a general movement looking toward the overthrow of all farmers' cooperative organizations, will probably call forth some lively and spirited discussion, as will the question of evaporation of fruits, improvement of nursery stock and pure seed legislation.

An opportunity will probably be afforded for visitors to see the big new raisin plant in operation at Sun Maid City and the new patented process for peeling peaches which is being used so successfully by the Peach Growers' company.

During the same week the county horticultural commissioners and the State Nurserymen's Association will hold their annual meetings so Fresno promises to be the headquarters of things agricultural this fall.

Kern County Oranges

By Ernest Braunton

THE most noticeable feature about Kern County orange orchards is the extreme cleanliness of the trees compared with those of the great orange growing districts. The writer carefully examined trees in several localities and could find no insect pests nor evidences of their former presence, and foliage and bark were remarkably clean and bright, a noticeable contrast with the dinginess evident in districts where black scale is prevalent. The reason for this is that these pests cannot survive the hot dry spells experienced in mid-summer. Even in the shade of the large Kern County Land and Water Company's building in Bakersfield the trees were as clean as any.

The writer drove through a large part of Kern County's 1,400 acres of citrus groves and found that about one-half are in bearing, the remainder being too recently planted to yield a crop. Among them there is but a slight sprinkling of varieties, Navels being the one favored sort. The oldest groves are about 20 years, the more extensive plantings about ten years old. Very few orchards are on comparatively level land, but occupy the mesa lands well above the valley. The oldest plantings are on the Tejon and San Emidio ranches, and small areas are dotted about in many districts around Bakersfield. But as present planting appears most active about Edison, the writer most critically examined several orchards in that district.

Edison Navels

From Bakersfield we drove about eight miles eastward to the Edison settlement, through small orchards of olives and deciduous fruits interspersed with patches of alfalfa, cotton and other green crops, but these lands are largely devoted to growing cereals. At Edison there are 600 acres in Navel oranges, owned by many individuals, but nearly all under the superintendency of B. R. Harding, an experienced orchardist, formerly living in the San Gabriel Valley near Los Angeles. There is a large and well equipped packing house from which were shipped in early winter, 1919, one car of pomelos and 54 cars of Navels. Here the older groves were planted ten years ago. The only dif-

ference noted between these and Navel trees elsewhere is a slightly dwarfer, more compact habit, the trees spreading but of thick growth. The general condition was of the best and not a single "off color" tree was seen. These orchards mature their crop very early. Last year the picking began in November and the last of the 54 cars was packed at Christmas. This early marketing enables the orchardists to obtain the best of prices for their entire output and the future is very promising. After the visit the writer had a chat with one of the larger owners, a Bakersfield banker, who was more optimistic over this district's citrus development than over that of any of the many horticultural crops for which Kern County is noted. He also said that smaller groves on the mesas near Delano, Jasmine, Kern City, Lerdo and other points mature their fruit very early and that a ranch near Wasco is building a reputation for its pomelos.

THE FARMER AND FOREIGN TRADE

By E. W. Wilson

THE average fruit grower of California, whose surplus products go to foreign markets, sufficiently informed concerning our merchant marine, the prevailing freight rates, insurance premiums covering the various hazards of the sea, the modern methods of packing for foreign shipment and the present financial problems as affected by the various exchange conditions?

The surplus products of the California farmer are now being consumed by the people of Europe, of Central America and South America, of Australia and the Orient. As a result of the United States having become a creditor nation the markets for the farmer have widened very greatly and some very important problems have developed for him to solve. The various business angles that bear on these problems must be thoroughly understood if our producers keep in mind the dollar and cent side of them. Last year the prunes of Santa Clara Valley were consumed by people in almost all of the countries of the world. The peaches, apricots, pears (dried and canned) and raisins of the Sacramento

and San Joaquin Valleys enjoyed a market almost as wide as that of the prunes.

The much talked of "opportunities" for extension of foreign trade are of no value unless the foundation is properly laid in a thorough understanding of the people with whom it is expected to trade; for example, the condition under which the customer lives, the usages and needs of these far distant communities and how they can be cared for upon a basis that will produce a friendly feeling and insure a repetition of the orders. In some countries success in trade development may mean the low cost of production, in others, the superiority of the article of merchandise, in others, prompt service with reasonable credit arrangements, and in others it may be nothing more nor less than catering to "temperament."

How are the California farmers going to know the best plan to adopt unless they familiarize themselves with all the existing conditions in the countries where they expect to find markets for their products? To trade with other nations a bargain must be made, and those who have nothing to give, or are not willing to give, can expect little in return. The war gave us much of the foreign trade we now have. Nothing, however, but our own industry and intelligence in trade matters will save to this country these opportunities and business connections. Foreign buyers for our surplus products grown on the farm will not continue to come here so we must make ready to go where the markets are in search of purchasers.

World geography, ocean transportation, trade routes, foreign laws and customs, foreign finance and foreign exchange are all subjects that have a monetary aspect to the tiller of the soil. Haphazard farming and indifferent marketing will not provide a profit for the farmer in the future.

PRUNE AND APRICOT GROWERS MARKET THROUGH ASSOCIATION

Manager Coykendall of the California Prune and Apricot Growers sends out statement that non-members of the California Prune and Apricot Growers who stand to lose hundreds of thousands of dollars on their 1920 crops through their inability to find immediate buyers for their fruit will be permitted to sell their 1920 crops through the association under terms of an arrangement made public whereby the association will handle their entire production.

The association will take care of the prunes and apricots these growers deliver by forming a second pool and making a first payment to these growers equal to the collateral value of their fruit in the warehouses of the association. Growers taking advantage of the association's offer will sign the regular crop contract and become members of the association.

The manager says that the association will fully protect its present members by not selling a pound of the prunes or apricots received under the new arrangement until it has made complete settlement with its old members for all the fruit they delivered this fall. Hundreds of outside growers were left stranded last August when the association refused to handle crops for non-members after it had named the price it would pay its members for their fruit. The independent packers, finding these outside growers at their mercy, have been declining to buy their fruit except at prices several cents under the existing market quotations.

IMPORTANT MEETING WITH AGRICULTURAL COMMITTEE OF REGENTS

Representatives of many of the farmers' organizations will meet with the agricultural committee of the university regents, at the latter's request, on October 13 in Berkeley, to hear the needs of the various agricultural industries as a preliminary to shaping the budget of the college of agriculture and agricultural experiment station. The agricultural legislative committee, representing 25 organizations, will attend this conference and later make a detailed study of these institutions and present conclusions to the regents. Many of the industries desire expansion of the

present investigational work and appreciate this move on the part of the regents to determine the farmers' needs.

AVOCADOS PLANTED

Human beings are the most curious of all animals. Especially do they wish to know what the other fellow in the same line of business is doing or has done, not always for business purposes, but often out of sheer curiosity. Hundreds have asked us what are the best avocados to plant, but several have said: "What have our best avocado growers in their orchards at present? I am curious to know—I know what they would plant now."

Well, J. T. Whedon of Yorba Linda, Orange County, reports the following in his orchard: 150 Fuertes, 50 six years old, balance top-worked on six-year-old stock in 1917-18; 68 Tafts, six years old; 62 Sharpless, one and two years old; 45 Knights, two years old; 35 Queens, one to four years old; 28 Lyons, two and three years old; 15 Dickey's, six years old; 10 Attlixos, now being top-worked to better varieties; 5 Lindas, four years old; 5 Kists, four years old; 15 miscellaneous, six years old; 15 Wilson Popenoe Guatemalans, all different varieties three to fifteen months old, a total of 453 trees.

L. D. Oliver, also of Yorba Linda, has 263 avocados of the following varieties: Fuerte, 150; Dutton, 140; Knight, 37; Rey, 28; Linda, 18; Taft, 16; Dickey, five; Queen, five; Sharpless, Spinks, Dickinson, Lyon, Ganter, Harmon, Blake, three of each; unknown Guatemalan seedlings, 29.

These two orchards are fairly typical of all. A list of those grown on the Spinks place at Duarte, comprising about 2,000 trees, was published in the Cultivator some months ago.—E. B.

The Miskin Scraper

IS

THE BEST SCRAPER ON EARTH

And we can prove it. Write for circulars

The above is a cut of the Famous Miskin Scraper, which in operation, easy draft, greater capacity, and better work has many advantages over the common Fresno and wheel scrapers now on the market. Ask your dealer to have one sent on approval. Guaranteed to take twice as much dirt per trip with the same horsepower.

Made in 2-horse, 3-horse and 4-horse sizes. Can be operated by small tractors from the tractor seat, by the tractor driver.

Send for descriptive circulars, with prices. We pay the freight.

12 Years' ACTUAL FIELD WORK

THE HEIDER'S 12 years' service on farms show the same superiority on belt work as in the field. Everywhere the Heider is solving the shortage of man power on the farm—in every state in the union and in a score of foreign lands. 12 years' success is your guarantee.

No Gears to Strip

Heider friction drive does away with clutch, transmission gears and bevel gears—all three units in one. It means 15% to 20% less parts. Eliminates "gear-stripping." Means **7 speeds forward and 7 reverse** with **one lever** and **one motor speed** for **either** traction or belt work. The right speed for **every** job.

Send for Heider Catalog which includes Rock Island Tractor Tools. Also get "The VERDICT of Owners"—See what users say.

Working on Schedule with the Wallis

Time waits for no man—the farmer knows this better than any one else. If he doesn't get his work done when it should be done, his crop and his profit both suffer Wallis—AMERICA'S FOREMOST TRACTOR, removes this danger.

Because of its powerful light-weight construction the Wallis works steadily where heavier tractors fail. There is no packing of the soil, which makes for the best kind of a seed bed. To gain this desirable light weight the Wallis does not sacrifice one iota of power. Bulk is eliminated by the use of high grade steels and by advanced design. The powerful U-shaped frame (to be found only in the Wallis) is a shining example of rigid strength combined with light weight.

Wallis—AMERICA'S FOREMOST TRACTOR, works on schedule. It will do as much tomorrow as it does today—there is no uncertainty in its performance. Thousands of Wallis farmers have proved to their own satisfaction that Wallis power really means more acres per hour—more acres plowed, disced, dragged, seeded or cut.

If your neighbor owns a Wallis ask his opinion. Or write us for complete information on what the Wallis will do on your farm.

Shipping Point Inspection

The Southern California branch of the state shipping point inspection service on fruits and vegetables is now open for business, with headquarters in room 217, Wholesale Terminal Building, Los Angeles. This service has been established to meet the insistent demand from carlot shippers for inspection at shipping point, similar to that carried out by the federal government at destination.

Inspections are made only upon request and the certificates issued are practically the same in form as those now in use by federal inspectors at receiving points. Statements as to quality and condition of the products inspected are prima facie evidence in any court in the state and thus provide the shipper with a definite protection in case of attempted rejection or railroad claims.

F. W. Read, formerly in charge of the local office of the bureau of markets, has taken charge of the inspection program under the state department of agriculture, with headquarters in Sacramento. Although the system has been in effect only about two months some 1,000 cars of apples and grapes have already been inspected with satisfactory results to all parties. The work in Southern California is under the direction of H. H. Warner, with headquarters in Los Angeles, and it is planned to enlarge the corps of inspectors as rapidly as demands for the work warrant. Hartley E. Truax, of the grades and standards project of the United States bureau of markets, now has headquarters in Los Angeles and is cooperating with the state department of agriculture in standard-

izing trade terms used in describing carlots of California fruits and vegetables, at loading points.

The fee for inspecting straight cars is \$5, and for cars containing more than five commodities \$10. Requests for inspection should be made in time to allow the inspectors to examine the products while being packed, as it is not the desire of the local office to have the inspectors break down a partially or fully loaded car. The local office anticipates immediate requests for inspection of tomatoes, both from Orange and Los Angeles Counties, and of cauliflower beginning about October 15. Then it is planned to gradually enlarge the force to take care of the requests for inspection service on celery, lettuce and other vegetables, both in the Imperial Valley and local districts. Citrus fruit may also be added to the program if sufficient demand should arise.

The state department of agriculture has now definitely placed this service in operation and its continuance will depend upon the cooperation of the shippers and the extent to which they desire to avail themselves of an official shipping point inspection. The men in charge of the work as well as the present force of inspectors are experienced in the commercial methods of handling the business and are familiar with the practical problems confronting California shippers.

Requests for this service may be made at the local office of the United States Bureau of Markets, Room 206, Wholesale Terminal Building. Phone Pico 3691, or at Room 217, Wholesale Terminal Building.

Lake County Hop Crop

By Ernest Braunton

In Scotts Valley, near Lakeport, Lake County, the writer found hops down on the rich bottom lands that have few rivals and no superiors, rivaled only where the same favorable conditions obtain. The largest acreage is that of O. A. Sanford, 50 acres, being garnered by 150 pickers. The

scribed, but as the hops do not grow large or bear heavily the first year, one neighboring grower has hop poles but two inches square and eight feet high and the vines interset with rows of corn. If crops and prices are good the man of limited means has enough capital at the end of his first season

Largest Hop Ranch in Lake County

Weighing the pickers' bags on the Sanford Ranch in Scott's Valley. The scales, desk and seat are on runners and trailed behind the wagon.

soil is a rich silt, a medium loam, neither sandy nor sticky.

The roots were planted in February and March, and the ground is then planted for a century if hops are desired in the soil that long. Roots have been found to go down more than 20 feet. The rows are planted seven feet apart and plants same distance apart in the row. Stout posts four by four inches and 20 feet long are set at every sixth row, three feet down in the ground. This gives a fine crop of poles without vegetation, 42 by 42 feet apart and 17 feet high. On top of these poles large wires are strung and smaller wires between. At every plant hill a wooden peg is driven in the ground, to which is attached "hop twine," and this is tied to the wires above. All this work is done in early spring before the plants commence to grow.

Hop vines need some training and the fields are generally gone over four times by "stringers" from March to July. Mr. Sanford starts out with the permanent equipment herein de-

to buy and set the lofty larger poles with present high priced labor. All hop farmers grow some other crop in young hop fields, generally corn, in Scotts Valley. No irrigation is necessary, but five or six cultivations are given between March 1 and July 1.

Picking commences about the middle of August and lasts about a month. The pickers receive a cent and a half a pound and make good money, for the average for experienced hands is 250 pounds a day. After the harvest the vines are cut by hand and burned. The field is then cleared for the next year's crop and restringing. No fertilization is necessary and the normal crop in this valley runs from 2,500 to 3,000 pounds per acre. This year, a dry one, the crop is 60 per cent of normal, the vines being of sparse growth and the hops smaller than usual. Some years the vines and hops are so heavy that in a high wind the whole field collapses. This happened in Scotts Valley a few years ago when in a field of 43 acres not a pole remained standing. In the midst of the

fields stands a drying kiln, so the crop haul is very short. In March of each year the roots are heavily pruned and the prunings used to plant new fields or sold to dealers. The first year's crop, if planted at proper time, will range from 600 to 1,000 pounds to the acre.

COOPERATIVE MARKETING

In an effort to eliminate speculation and waste in the distribution of food products and to bring the producer and consumer closer together a campaign is being inaugurated for expansion of the cooperative plan of marketing under the supervision of Gilbert B. Daniels, state market director, backed by the state department of agriculture and the farm bureaus of the different counties of the southern part of the state. The great success attained by cooperative marketing associations in the northern and central parts of the state has been the means of stimulating the activities of the growers of Southern California to such an extent that requests have been received by Mr. Daniels from nearly every county south of the Tehachapi for assistance in forming local and county wide marketing associations.

In carrying out this work Fred N. Bigelow, secretary of the state market commission, and James P. Britt, director for Southern California, are now organizing growers into cooperative marketing associations in Imperial Valley, where the lettuce and melon growers will be grouped together, and in Coachella Valley, where the onion growers, through their own cooperative marketing association, will market their crop. The vegetable growers in Lakeside, San Diego County, as well as at Carlsbad, are being brought together, and also the apricot and peach growers in Riverside County in the vicinity of Hemet and San Jacinto.

The county farm bureaus in connection with this work conduct preliminary investigations as to crop conditions, amount of foodstuffs available, proximity to shipping point, etc. Following this investigation Mr. Bigelow and Mr. Britt will arrange meetings with the growers in the different localities where the aid of the state market director is requested and will prepare subscription and marketing agreements, thus enabling the farmers to band themselves together in an association whereby they will be able to market their crop. It is the plan of the department of agriculture to assist in this work by placing inspectors at shipping points who will issue certificates as to the quality of the product, which will be a protection to the grower in the event of difficulty at point of shipment.

It is the opinion of the state market commission that cooperative marketing will not only increase production but by elimination of speculation and waste will decrease the price of necessities to the consumer.

Headquarters of the state market commission for Southern California have been opened at 310 Wilcox Building, Los Angeles, and it is the intention of the state market director to organize the growers wherever conditions are found favorable.

SELECTING LONG STAPLE COTTON SEED

By M. E. Bemis

Unusual pains are being taken in selecting seed of long staple cotton in the Salt River Valley of Arizona for next year's crop. The first seed was distributed by the government. Later as the demands continued fields of especially fine cotton were rogued by representatives of the plant bureau, and the seed from these fields was used for planting. The acreage now in cotton and the demands for seed from other localities not favorably located for the production of pure seed, owing to the danger of hybridization, have made it necessary to continue this work on a larger scale. Through a cooperative arrangement between the Tempe Exchange, representing the growers, H. C. Heard, county agent, S. H. Hastings of the Southwest Cotton Company, Warren Parker of the county farm bureau and T. H. Kearney of the U. S. department of agriculture, it is believed that a sufficient number of fields of first class cotton have been rogued to insure a generous supply of seed for next year's plant-

ing. Growers this year have generally found that it is false economy to economize on seed for planting, for a heavy planting of seed is more likely to insure germination and consequently a good stand, which is the first essential to a profitable crop. It is expected that seed produced from these fields will be certified to by authorities so that growers will be protected. Under this cooperative arrangement no profit will be made by anyone on the seed. As an example of the thoroughness with which this work has been done, it is noteworthy that in one field recently more than 1,000,000

plants were examined without finding a single hybrid or upland plant in the field.

FROM LAKE COUNTY

Lake County has just finished harvesting a fair crop of pears. Quality good, prices about \$75 per ton orchard run. Prune harvesting is now on, weather very favorable, crop rather light. Walnut crop very good but lighter than last year. The bean canneries have just closed a very successful season. Had a very favorable fall, no frost until they were closed.

Will have a big crop of alfalfa seed, threshing now.—J. B. Hendricks, Lakeport.

KILLING OUT STAR THISTLE

I am a reader of your Cultivator and like it very much. I have a good way of killing yellow star thistle. This is it: In the fall when it begins to sprout and gets about six inches high I pile manure on it about a foot deep and leave all winter. I have tried this on several small patches and none of the thistle returns.—Chris Garrsen, Chico.

Could you use 3 hours more a day?

A Western Electric lamp post outside means an up-to-date farmer inside.

"The chores and odd jobs around my farm took about three hours a day, before I got an electric power and light outfit. Of course, if you know where to get all the farmhands you need—at \$2.00 a day—this letter won't interest you."

Thomas Ball

Editor's Note: Mr. Ball is a farmer near Darlow, Kansas.

A rule we farmers don't give much thought to the value of our time. But we suddenly realize that time is worth money, when milking the cows or mixing the feed keeps us from bigger jobs, out in the fields.

"Last year I made up my mind that I would look for a farm plant with power enough to do real work. The one I picked was the Western Electric Power and Light Outfit, and please notice that putting the word Power first in the name describes the outfit very well. It is powerful. But I'm not going to praise it up to the skies. I just want to describe this outfit and the

work it is doing for me, and let you judge whether it would suit your needs too.

The battery lasts longer

"It is the 'tapering charge' that makes the Western Electric battery last so long. The charge doesn't strain the batteries, because as they fill, the current gradually slacks up by itself. These batteries are powerful too. They can run my portable motor for hours and hours on a single charge. Or they can operate ten electric lamps for thirteen and a half hours.

"Then there is the generator, built for endurance and hard work. In fact, it will run such a combination as an electric iron, twenty lamps and a one-sixth horsepower motor just as long as you keep it going.

"With the batteries and the generator working together, you just add the capacity of both. That explains how I can use electricity to milk the cows, separate the cream,

churn the butter, turn the grindstone and pump water.

The powerful engine is a big help

"The Western Electric Outfit has an extra size engine, with a pulley all ready to be hitched up to a lot of the machinery I used to turn by hand. So taken all in all, you can see how I save at least three hours a day for work in the field. And in these

times when farmhands are so few and far between, it is mighty important to have this dependable help that my electric power outfit furnishes."

A farmhand you can always depend on—Western Electric Power and Light

DE LAVAL IRRIGATION PUMPS

High Efficiency Saves Power

Here are shown the five steps in the evolution of the DeLaval labyrinth rings. The advantages attained in reducing the leakage, and increasing the clearances have led the DeLaval engineers to perfect the ring "E." This consists of two removable rings, one attached to pump casing, the other to revolving impeller. The intermeshing grooves greatly reduce leakage without the many disadvantages of the straight rings. These rings are made of bronze and thoroughly tested.

This is one of a series of advertisements explaining the different parts of the DeLaval Irrigation Pump.

Uncle Sam's Garden at Chico

By Ernest Branton

EAR Chico, Butte County, the United States department of agriculture, bureau of plant industry, has an extensive garden where everything living is labeled "P. I. G." followed by a number, yet there is not a pig on the place. The letters stand for "Plant Introduction Garden." It has had several directors, but the present one, R. L. Beagles, has been there for 16 years.

In this garden the writer saw many interesting and curious examples of

PLATE OF JUJUBES

One of the most desirable varieties of jujubes. They were grown on the place of Forrest E. Grow, Eagle Rock City.

plant life. Here is one: Some clumps of giant timber bamboo, *Phyllostachys Quiloi*, were planted 12 years ago. Each year bigger canes than before shoot up, grow rapidly, cease quickly. This year a shoot appeared May 28, grew to July 15 and finished for the season. It is five inches in diameter and 45 feet high. Its growth was measured and marked on a stake each morning. Its longest upward flight in one day was 23 inches. That number has ever been considered a hoodoo by many and even a bamboo couldn't pass it.

A giant almond of heavy shell, introduced in 1912 by Dr. Walter T. Swingle, from Granada, Spain, is growing but 30 feet from the Jordan and other standard varieties, yet the new one is three or four times larger and has a kernel bigger than the Jordan, shell and all. What its true commer-

cial value is has not been determined. The ones eaten by the writer were excellent in texture and flavor, but the nut is hard to crack.

A new peach, known as Sutter Creek, promises much, for up to the present it has proven immune to leaf curl while all about it are affected. Its fruits are equal to the Elberta and ripen a little later. It was sent to the garden by Dr. W. A. Taylor, now chief of the bureau of plant industry, who found it on the ranch of W. E. Downs, Sutter Creek, Amador County.

There are a number of very promising pears in the garden, some of which are crosses between standard varieties and oriental sorts immune to pear blight. Fruits of these sampled by the writer were of fine size, form, color and flavor and are full of promise for the California grower. The Chinese "melting pear" is a handsome golden fruit almost as hard as stone yet strongly attractive. When already perfect in color it may be picked and shipped around the world before it is ripe enough to eat. None are palatable in less than three months after apparent ripeness, but are said to be "melting" when once soft.

Jujubes and pistachio nuts are present in great variety, and among the late arrivals at the garden is a jujube specialist, C. C. Thomas, who has studied the trees and fruits in all parts of the United States. One ornamental is worthy of note as a rival of the oriental plane or sycamore for street and highway planting. A few years ago the writer recommended the latter as the only good tree that could be grown along a national highway from the Atlantic to the Pacific. The newcomer is an elm, native from Turkestan to Siberia and North China. Its name is *Ulmus pumila*, and though never a large tree, is of sufficient size for street planting and not slow of growth for the first few years. H. E. Allanson of the station staff says he has seen it at Mandan, South Dakota; Washington, D. C.; in the state of Washington and elsewhere, and in all these widely separated places it appears as thrifty, as much at home, as it surely is in all parts of California. These are but a few of scores of interesting plants now on trial in this great garden.

Citrus Blast

Citrus blast has occurred in various places in the Sacramento and San Joaquin Valleys and foothills and varies greatly in severity. The places and seasons with the most wet weather have most blast. When the trees are kept dripping wet for long periods the conditions appear to be particularly favorable for the disease. The blast has not been commercially serious in the drier places where it occurs.

Spraying with Bordeaux mixture greatly reduced the severity of the disease although not preventing all injury. Sprays with other materials gave less control or none and late sprays (after December 15) with Bordeaux were of little if any value.

Succulent foliage formed late in the season suffers worse than short well matured fruiting twigs. All very succulent shoots of the first year are liable to severe injury. This suggests that all possible skill be used to keep the trees in health with the smallest possible application of water in the summer and fall. This should also conduce to early ripening and high quality of fruit. Also no heavy pruning should be practiced as this causes the growth of large succulent slow maturing shoots. If such shoots are being formed it is probable that their character can be changed by pinching the tips before they become too long.

Navel oranges seem to be most susceptible; with seedling orange, pomelo, tangerine and lemon, less so. It is possible that the difference lies mainly in the greater tendency of the navel orange to form succulent shoots, but it is sufficiently pronounced to recommend the so-called seedling oranges and the various varieties of tangerines to the careful consideration of pros-

pective planters in the more susceptible districts.

Where many leaves are killed the foliage becomes thin and many twigs die leaving the tree depleted in vigor and with production reduced. Where the affected twigs remain alive the dead areas, sometimes an inch long, become reddish scabs and are shed off in three or four years by the growth of the bark below, it is stated.

The brown scabs were found to begin as watery dark patches, suggesting pear blight, but not so extensive; at first they are full of bacteria. H. H. Lee, a graduate student in the college of agriculture, studying these bacteria, was able to produce the disease at will by introducing them into healthy orange twigs and leaves. Additional phases of the study are being made at Berkeley and at Riverside under the direction of H. S. Fawcett.

BERMUDA POTATOES

The 1919-20 potato crop in Bermuda was disappointing as to quantity, being but two-thirds the yield of the previous season. But the prices were the highest ever known, averaging \$13 a barrel. Of the 20,000 barrels of seed potatoes used for the last crop, 6,000 came from the United States. Seed from the ensuing year will be largely secured from an American certified seed farm. The main fertilizer used is castor meal which costs \$72 a ton.

Effort is being made to associate members of the farm bureaus of Merced, Madera and Stanislaus Counties in cooperative buying.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Fence on Line

For the past 25 years I have maintained a fence between my own land and that of my neighbor. May I require my neighbor to pay for one-half interest in this fence and for the upkeep of the fence?—Subscriber, Arbuckle.

The rule is definitely laid down in respect to fences that co-terminous owners are mutually bound equally to maintain the fences between them unless one of them chooses to let his land lie without fencing, in which case, if he afterwards fences it, he must refund to the other a just proportion of the value at that time of any division fence made by the latter. You may, therefore, require your neighbor, if his land is otherwise fenced, to pay to you his proportion of the value of the fence at the present time and require him to pay for the upkeep thereof. If he neglects after demand in writing therefor, a judgment may be obtained against him with interest from the time of such demand for the amount due from him.

Pay for Grading

I graded land for a rancher purchasing his land upon contract. The grading was necessary in order that the land might be irrigated. He says that he has no money to pay. He is also working for wages and I am informed that I cannot garnishee. What are my rights?—Subscriber.

Any person, who, at the request of the owner of any lot or tract of land, grades, fills in, or otherwise improves the same, has a lien upon said lot for his work done and materials furnished and every such improvement done with the knowledge of the owner or any person having an estate in said land shall he held to have been performed and furnished at the instance of such owner and such interest shall be subject to the lien filed, unless such owner within ten days after notice of such work being done posts a notice that he will not be responsible therefor upon a conspicuous place upon the property and records a verified copy of said notice in the office of the county recorder. The notice must contain a description of the property, the name of the owner, and the nature of his title or interest. The lien in this case must be filed in the office of the county recorder within 90 days after the acceptance of the work and within 90 days after the filing of such lien an action must be recommended in the superior court to enforce said lien, in which action sale may be made of the real property in the like manner as the foreclosure of mortgages. If your time has not expired it would seem that if you take the matter up with an attorney who has some knowledge of the law, you might be able to obtain pay for your services. In this case, as in many other cases, the complaint against the law is based rather upon the inefficiency of the person to whom you have applied to take action than upon the law itself, as it would seem that the law would give you a perfect right of recovery.

Collecting Grocery Bill

I owed a grocery bill, but ceased dealing with that grocer and was paying the bill off at five dollars a month.

Without notice, grocer levied a garnishment upon my wages, although I am a married man with family. The constable serving garnishment claimed that he had placed a lien upon some real property which I possessed and collected various fees therefor. Is there no remedy?—Subscriber.

The earnings of the defendant for his personal services rendered at any time within 30 days preceding the levying of execution or attachment when it appears by his affidavit or otherwise that such earnings are necessary for the use of his family residing in the state and supported in whole or in part by his labor are exempt from execution, but where a debt is incurred by the defendant, his wife, or family for the common necessities of life one-half of such earnings above mentioned is subject to garnishment or attachment. In the above case the only lien which could be levied against any real property would be an attachment. The justice of the peace would be entitled to no fees to be collected from the defendant and if such justice of the peace served such papers or attempted to collect fees from the defendant you should take that matter up with the district attorney of that county as it might be that he has committed a serious offense. Anyone to whom an ordinary bill for goods delivered is owed may without notice file his complaint and issue process of attachment thereon. Ordinarily this is not done. In many instances such right is essential to the protection of the claim of the seller. This is another instance of ignorance of the law and possibly abuse of process rather than a defect in the law.

THE AMERICAN FARM BUREAU FEDERATION

(Continued from cover.)

A bureau of trades relations has been created and financed.

A bureau of legislation has already functioned in important national legislative matters.

A bureau of distribution has in preparation a line of work concerning national and world markets.

A bureau of education is just beginning to function in publicity and statistical problems.

A bureau of economics has begun to work on farm credits, income tax, deflation of prices affecting agriculture, and the general business of farming and farm management.

The American Federation is investigating transportation problems, making a census of freight equipment of the railroads; looking into the livestock and packing business; showing its interest and opinion on the Nolan bill, the Volstead-Capper bill, the Truth in Fabric bill, the Townsend Highway bill, the Adamson law, the National Agricultural Appropriation, and legislation affecting strikes.

WILT RESISTING TOMATOES

The disease of tomatoes known as "wilt" has been very destructive this season, causing loss to home gardens in many sections, according to J. T. Rosa of the Missouri college of agriculture. This trouble is caused by a fungus in the soil which enters the plant through the roots, plugs up the water vessels of the stem and causes the plant to wilt down slowly. The disease usually does not appear until the plants are quite large, often not until fruit begins to ripen. The effect is to kill the plants prematurely so that little or no fruit is produced. Nothing can be done to save infected plants, and since the fungus lives in the soil for several years the tomato crop is likely to be attacked still more severely in succeeding years. Furthermore, the disease is easily spread by tillage tools, wash water, or the feet of animals, so when one spot in a garden becomes infected, soon the whole garden and then the neighboring gardens get "tomato sick."

Christensen & Beaulieu of Mt. View, California, were up against the problem that is now facing ranchers all over the state. The water level in their well had fallen so low that their old vertical pump wouldn't get more than half of a supply.

They might have dug the old pit deeper, and worried along a while with the old pump—but they weren't going to be satisfied with temporary makeshifts. They wanted permanent results! So they installed a Bean Turbine in the same well where the old pump worked—and they got permanent results—

- they have a good supply now.
- a good supply insured for the future.
- pit dangers eliminated.
- money saved.
- time saved.

If your water levels are lowering, your problem is the same—solve it with a Bean Turbine.

This Month in the Ornamental Garden

Southern California

By Ernest Braunton

ANY professional gardeners call October the bulb month, and if it prove a cool spell with no prolonged warm weather following bulbs planted this month surpass in floral return those of any other period. It is already into the Watsonia season for they may be as profitably planted in September, but nearly all other bulbs may be planted now. Anemones, freesias, gladioli of the Bride, Blushing Bride and Peachblow type are the first three alphabetically and we must pause to recommend the latter. They represent the dwarf type of gladioli and are of more exquisite color and texture than the larger or summer "glads."

Hyacinths, iris of the Spanish and English types, lilies of many sorts, narcissi of all kinds, ranunculi, or French buttercups, and tulips are but a few of a long list now seasonable to plant. Those generally known as Dutch, or Holland, bulbs are awaiting a place in the garden.

All bulbs do best in a rich free loam, but are often injured by fresh manure, therefore use none but that well rotted, or a commercial fertilizer. In either case thoroughly mix it with

the soil by spading and respading. Where sand is easily available, especially if the soil be heavy or of close texture, it is well to first place a handful of sand under lily bulbs and one on top so the sand will drop down in the scales of the bulb instead of soil containing fertilizer, which may start bulbs rotting.

In seeds of annuals and perennials for present planting the list is a long one, as any seedsman's catalogue will disclose, but a short list of the more common, more easily grown should contain: calendula, Canterbury bells, centaurea, coreopsis, columbine, cockscomb, foxglove, larkspur, mignonette, pansy, petunia, phlox, salpiglossis, salvia, scabiosa, snapdragon, stock, sweet pea, Sweet William and others of the dianthus group of the pink family.

Any plants of these available may now be planted, also clematis, lobelias, primulas, and verbenas. Evergreen trees and shrubs, except those from the tropics, transplant well, and begonias, fuchsias and marguerites easily propagate from cuttings. Roses should be thinned of weak and thick growths, but need not be otherwise pruned until spring. Cultivate and fertilize them heavily.

Northern California

By A. R. Gould

INDICATIONS are for an early planting season. Probable early rains will encourage garden lovers to plan extensive operations.

New shrubs will be secured and the collection of roses added to. Most subjects may be safely transplanted from now on and perennial plants may be subdivided.

Bulbs of all kinds should be put in without delay. A glance through the lists offered by the seedsman will give an idea of the wonderful shades one may secure in the tulips, these having become very popular. Whatever you plan to plant, study your soil and apply manure where needed. It is waste of time to plant in worn out soil. Manure and cultivate between the roses and keep well sprayed, as the aphid or green fly will be very prevalent. Tie up any long branches of climbing roses to the arches or trellis. The same applies to the wistaria and other vines which have made good growth this season.

Winter Flowers

We shall deal with the bulbs under another heading, but here we mention the following, which will bloom for some time and make the garden cheerful during these winter months. Sweet peas of the winter flowering types, forget-me-not, wallflowers, alyssum, stocks, violets pansies, English daisy, anemones, ranunculus, primula and marigold. Secure plants of these if you would have a continual display of color.

Some Useful Climbers

Many people have arches, bare fences or porches to cover and usually are in need of some quick growing climbers. Some varieties of roses, such as Cherokee, pink, Cecile Bruner, American Beauty, White Banksia, Silver Moon, Excelsa and Glorie de Dijon are all suitable. Clematis Jackmanii and C. paniculata are both desirable. Honeysuckle is an old fashioned fragrant vine and jasmine officinalis, the pure white flowering type, is, also. Passiflora, pink and scarlet, are both good. Wistaria comes in purple, pink, lavender and white and is very popular. These are all flowering vines and may be planted now near the house or trellis. For covering old tree stumps English ivy or the mattress vine would be ideal, while for banks vinca, nasturtiums and mesembryanthemum are ideal.

Bulbs

A general survey of the bulb list and past experience of some of the varieties named lead us to advise as

follows, the select list giving the very best, which should be secured as soon as possible, as they are usually none too plentiful. Some seedsman send out their own mixture of Dutch and Roman miniature hyacinths, which include a fine range of colors. For named large flowered we advise planting: Gertrude, deep rose; Rio des Belges, scarlet; Enchantress, light blue; Grand Maitre, deep blue; Sunflower, buff yellow; L'Innocence, white. Tulips—Single early, Artus, scarlet; Cottage Maid, pink; Golden Queen, pure yellow; Double Early Boule de Neige, white; Rubra Maxima. Parrot tulips have brilliant markings. Narcissus, under which are included daffodils, should be in every garden and are some of the earliest to flower among the bulbs, especially the Polyanthus types. Large trumpet flowered narcissus are Olympia, King Alfred, Glory of Leiden, Emperor, Sir Watkin, double daffodils, Von Sion, Silver Phoenix, jonquill campernelle, poet's narcissus. For bordering the walks crocus are very useful and they flower in the early spring. They may be secured in mixed colors or in blue or yellow shades.

Perennials

Sweet William, pyrethrum, rudbeckia, Thalictrum dipterocarpum, veronica spicata, Stokesia and Tritoma.

POINTERS ON PAINTING

Paints and painting cost less than repairs necessitated by decay or disintegration.

There is no such thing as an all-service paint. Paint should be selected according to the material to be painted and the conditions under which it must give service. The wear on a floor is more severe than on a wall; hence the floor calls for a tougher, more elastic paint.

Painting should not be done when the temperature is lower than 50 degrees Fahrenheit, as the paint will not flow well. It is impractical to paint a hot surface. The old painting axiom is: In spring and fall follow the sun; in summer follow the shade.

Outside painting should be done in dry weather. Surfaces should not be painted when wet.

Surfaces to be painted should be gotten as smooth and clean as possible. They should be free from grease. If painting new wood, knots and sappy surfaces should be shelled first. If painting over previously painted surfaces, all blisters and loose or peeled spots should be scraped or burned clean. A brushing with a stiff wire brush followed by sand

Airplanes

An airplane in operation gives the most severe test to the quality of an oil—and Zerolene meets the test successfully.

Zerolene is used by more than half the automotive equipment owners of the Pacific Coast, following the recommendations of our Board of Lubrication Engineers for the correct grade of Zerolene for automobiles, trucks and tractors. Ask your Zerolene distributor for a Correct Lubrication Booklet for your engine.

TRACTORS: There is a correct grade of Zerolene for each type of tractor.

paper is good practice.

A priming coat usually pays for its cost. A firm base for the final coats is very essential to insure long service. The primer should be thin enough to penetrate the lumber; it should be well brushed in.

Only pure linseed oil or pure turpentine should be used to thin paint.

Although frequently used, ochre is not a good primer. The primer should be of as good quality as the body coats but reduced to the right consistency. Elbow grease is a very good thing to use on paint, especially the priming coat.

If the paint is cracked in small hairlines which do not go through to the wood, reduce the first or priming coat with equal parts of raw linseed oil and turpentine, in order to penetrate clear through to the wood. This only applies where the old paint is well bound to the surface.

If the old paint does not adhere well, scrape the surface with a stiff wire brush to remove all scale, then dust with a stiff brush.

Spots from which much of the old paint is scraped should be touched up with a thin coat of paint, reduced with turpentine.

After this has dried the surface is ready for the first coat.

Paint may peel from any one of several causes, but the most frequent cause is the improper application over a damp or frosty surface.

Paint that is peeling rolls back from the surface in thin scales. A coat of paint put over a seemingly good surface will sometimes peel down to the bare wood or to the priming coat, showing that the old paint has lost its grip.

Be on the lookout for this condition when repainting surfaces. The old paint surface should be well wire brushed and dusted, after which the bare spots should be touched up with a thin coat of paint, reduced with pure turpentine.

When these spots are dry, paint over with the first coat.

Blistering is easily recognized and is caused by moisture having come out of the surface under the paint or from priming with cheap ochre.

When this condition exists wire brush and dust the surface, then wash with turpentine to cut any grease or excess oil which may be present.

After this is dry proceed as directed for first coat work.

When the paint cracks into large blocks of every conceivable shape (becoming alligatored, so-called) it is caused by the application of heavy, non-drying undercoats, "flat" paint, the use of adulterated oils or from painting over cheap ochre priming. Boiled linseed oil in the under coat will also produce this condition.

The only treatment is to burn and scrape off the paint down to the bare wood.

SUDAN GRASS IN NORTHERN CALIFORNIA

Near Kelseyville, Lake County, on the Shirley ranch, there was grown in 1920 a total of 30 acres of Sudan grass, some of it as a cover, feed and seed crop in a young pear orchard, but for the most part in solid fields. Experiments have proven that it needs much space for best development. J. E. and J. P. Shirley were found in the field and stated they had grown it in rows from 30 to 42 inches apart and that best results came from the latter. The growth on this ranch is extremely vigorous, some measuring fully eight feet high.

The amount of seed used in this section, known as Big Valley, ranges from two and a half to four pounds an acre and is drilled in in early spring, planting time varying with the seasons, and is usually cultivated three or four times. It is grown primarily for the seed crop, yielding a ton and a half to the acre and selling (1919 crop) at ten and one-half cents a pound. One of the Shirleys said the straw is worth five to six dollars an acre and the high stubble and roots are deeply plowed under to form humus. The crop is cut in late August with binders, same as with other cereals. This is the third year's crop on the Shirley ranch and it has paid well. The estimated 1920 Sudan seed crop for Big Valley is about 200 tons. —E. B.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Fish Fertilizer on Oranges

Will you kindly give me the amount of fish fertilizer necessary to fertilize a five acre Valencia orange grove and the way to use it for the best results? Do you think this fertilizer good?—Subscriber, Garden Grove.

Fish fertilizer is rather indefinite and may refer to scrap, meal or tankage. The difference in value is slight, only the scrap is supposed to contain a higher percentage of nitrogen. But this matter of fertilizers depends on so many other factors that only the most general information can be given. But roughly, on Valencia orange trees apply one pound of any of the three kinds of fish fertilizer per tree per year of its age. That is, if the tree is one year old apply one pound; if five years old, five pounds. However, if on arriving at maturity of the tree, then 20 pounds would be the maximum, no matter how old. These fish fertilizers contain approximately eight per cent nitrogen, 60 per cent phosphoric acid and no potash whatever. They are not as quick acting as dried blood or ordinary slaughter house tankage, and are more liable to contain fats which prevent decay and nitrification, so that they should be applied somewhat earlier than blood and several weeks earlier than nitrate of soda. January is perhaps a good month to make the application, so that they will come into action in time to encourage spring growth.

Winter Potatoes

I would like to have the important information on raising a winter crop of potatoes: The kind that grows and yields best in winter and is most marketable; also best time to plant. My soil is rather loamy and I can irrigate. The climate is temperate.—Subscriber, Ventura.

The key to the situation is frost. If your section is sufficiently free you may successfully grow winter potatoes. They are grown in the coastal foothills near Los Angeles from Santa Monica to San Pedro with abundant success. Neither variety nor treatment differs from that of spring or autumn potatoes so often treated in recent issues of the Cultivator. White Rose seems to be the preferred variety, but we have no proof of their superiority over some others. They are planted in the section noted in November, December and January.—E. B.

Canning Refuse on Orchard Soil

I am living near a fruit cannery and have given them permission to dump their pear and peach peelings in my prune and apricot orchard, believing it would fertilize the ground. Now one of my neighbors tells me it is harmful to the orchard and will sour the ground.—Subscriber, Campbell.

We would by all means use any of this refuse which may be secured. The same question has been raised as to citrus fruit and we remember one year after severe injury by freeze refuse lemons were dumped on orchard soil to the depth of one foot. These were later plowed under or at least partly turned in for they were so deep that they could not all be turned under, and the soil was later declared to be one of the best portions of the ranch.

Specifications for Dairy Barn

Please give specifications for a modern cow barn designed to have the cows' heads to the center of the building?—S. H. A.

It is impossible to give these specifications because of space required. Besides, without knowing more of the number of cows in dairy and numerous other conditions on the ranch even an architect would be unable to plan, but some of the general requirements in the modern dairy barn, such as width of feeding alley, length required for large and small breeds of cattle, depth and width of butter and clearance behind may be given as general

suggestions. This has been referred to G. E. Gordon, who answers:

It is quite difficult to give specifications without showing blue print plans. However, a very good system when the cows' heads are towards the center of the barn is to have the pathway below the two rows of stanchions slightly raised from six inches to a foot above the mangers. This makes feeding quite easy and the mangers can therefore be built in the barn from concrete when the floor is being constructed. The distance between the stanchion and gutter is usually about 4 feet 8 inches. With small breeds this can be cut down slightly or with large ones it can be lengthened. The gutter may be about 12 to 14 inches in width and varying in depth depending upon the slope and drainage facilities.

I would suggest that if you are going to build a barn you write Division of Agricultural Extension, College of Agriculture, Berkeley, California, for a copy of their blue print plans of Standard California Type Milking Barn, which they will be glad to loan you.

Melilot and Barley

Would like to know how to get melilotus started in September. The hot winds dry out the land as fast as it is irrigated, and in furrowing to irrigate it seems to be covered too deep to come through except a little along the bottom of the ditch. They speak of sowing it in September around Los Angeles; they may have a better way; would like to know what it is. Why is barley not used more for a humus crop? It grows quickly and produces well.—Subscriber, El Cajon.

Your only remedy would be to sow as quickly as possible after irrigation and cultivate deeply with a spring-tooth or a weighted harrow. The seeds will come up. But it would be better to use a crop having larger seeds. In the sandy and gravelly soils below Glendora best results come from vetch and doubtless the same would prove true with you. Barley is a fine cover crop for humus, so is rye, but neither gathers nitrogen through bacteria resident on the roots, as do leguminous crops.—E. B.

Trees Immune to Nematodes

Are there any varieties of fruit trees not affected by nematodes? Is any effort being made to find a remedy for the pest?—Subscriber, El Cajon.

No fruit trees immune to nematodes have yet been found, though investigation is going on.

Permanent Pasture

Please suggest a seed mixture to sow for permanent pasture for cow and horse and that could carry a few hogs part of time. Soil is slightly heavy, not real clay but lacking humus. Must depend on rains for water. How soon could it be used after seeding? Can Napier grass be subdivided after October 1, or would it be better to wait till spring? I have one plant about five feet high, probably 50 shoots in it, that I wanted to leave to mature seed so I could use the canes for planting. In case they don't mature, could it be left uncut over winter and planted in spring?—Subscriber, Sacramento.

The time is late for autumn planting and too early for spring planting. Of course barley will give you the best winter forage crop if sown 50 or 60 pounds to the acre, and there then remains enough time to sow a spring crop. Or ten to 20 pounds may be sown for a nurse crop. Nothing will be better. You may also sow melilotus alba, the sweet clover, for immediate results, and put in at same time Rhodes, Bermuda, and Paspalum dilatatum. The three latter will not be seen until spring, but the white melilot or sweet clover could be grazed off in the meantime. One may also sow for immediate grazing: smilo, alfalfa or bur clover. It would be well to sow a mixture of the whole list. It is very difficult to know what will do best on your land. It is not well to divide the Napier now. Leave it until spring for both division of

roots and planting of chopped up stems. You must harrow your soil thoroughly.

Melilot Without Irrigation

Would like to know about sowing Melilotus Indica on light red soil without irrigation. Soil on top of hard pan varies from eight inches to two feet. When is best time to plant? Soil does not dry out until June.—Subscriber, El Portal.

You have no alternative but to sow it later, preferably after first rain. If

soil retains moisture in good supply until June you have ample time either to mature it or turn it under when convenient.

Feed During Molt

Will you kindly answer the following questions?—Subscriber, Hemet.

What is the best mash formula for laying hens during the molting season?

Some poultrymen add a small quantity of linseed meal (not more than 2½ per cent) to the regular mash, but the more general practice is to feed the dry mash as before, and in addition to this, once a day, a moist mash. This moist mash may be prepared in a variety of ways. Sometimes the regular dry mash is moistened with semi-solid buttermilk properly diluted or with some other milk preparation. Sometimes, if the poultryman has his own cow or can purchase real buttermilk or sour milk at a reasonable price, he need not look for a substitute. When the flock is small it is a good plan to cook up all kitchen waste once a day and thicken with bran alone or with a dry mash mixture. The aim is to give the birds a little something different to stimulate the appetite.

Do you advise feeding any kind of poultry tonic during the molting season only? If so, what?

Molting is a perfectly normal function, not a disease, and if hens are well cared for and kept in good condition by proper feeding little or no medicine is necessary. But while going through the moult the flock, on account of the extra drain on the system to supply new feathers, is feverish and more susceptible to disease. There are a number of good tonics advertised that if used in conjunction with cooling feeds at moulting time will lessen the possibility of disease and tend to shorten the moult. The most vigorous birds often molt so gradually that production is hardly affected. You notice a few feathers on the floor, some roughening or thinness of plumage, that is all. A splendid way to get hens through the molt is to turn them out into the orchard where they have some green range and a chance to pick up bugs and worms to help out their regular ration.

I have had a good deal of bowel trouble in my flock this summer, caused, I am satisfied, by the laying mash. I tried several prepared mashes, all containing beef scrap. Do you consider mashes containing dried buttermilk or the use of Lactein safer? Some of the mash I used I mixed with an equal amount of bran or mill run.

I have had no experience with either dried buttermilk or Lactein. I doubt if any of the milk preparations contain sufficient protein to entirely take the place of meat. You must have some meat scrap in your mash to keep the hens up to the required production. It is just possible the bowel trouble was not due to the meat scrap but to something else in the ration, or possibly to poor sanitation, poor ventilation causing colds or to impure water. If you prefer mixing your own mash you can test your beef scrap and know whether it is sweet or not. Put a little in a cup and pour boiling water upon it. If it gives out a nice, meaty odor, it is all right. If it smells like fertilizer, beware. When you have found the right kind of scrap, mix it with bran, feed meal and middlings in the proportion of two parts bran, one part middlings, one part feed meal, one part beef scrap. This is by weight. As long as the bowels are not normal it would be better to use less scrap. Bring it up gradually to the proportion given when you see it has no harmful effect. Too much of even the best scrap sometimes has a laxative effect. It is a good plan once in a while to give plain bran without any meat for a few days. Hens will lay fairly well on it, and if they are sensitive to meat it gives them a chance to rest from the more forcing mash.

Fig Failure

We have a large fig tree which we call the White Honey, but are not certain as to the real name. It has been fertilized and is irrigated regularly. Last year in fruiting time it lost practically all its leaves and the fruit was stunted and rather dry. This year it is retaining its leaves though they are undersized and rather weak

looking, while the fruit though plentiful is about the size of a thimble when ripe, while formerly the matured fruit was as large as a hen's egg. What is the trouble and is there any cure for it?—Subscriber.

This tree seems to have had good care but irrigation may still have been too superficial, not penetrating deeply enough. Address of subscriber is not given so we know nothing of soil conditions, but we believe this trouble due to hard pan. Striking an impervious soil layer will of itself stunt a tree but if heavily irrigated the trouble is aggravated. An excess of stagnant soil water in hot weather quickly decomposes and sets up a poisonous condition fatal to plant life. We would recommend digging down three or four feet to ascertain if drainage is good and if not, making it good.—E.B.

Fern Culture

I have been given a nice lot of mountain fern roots. Am anxious to have them do well but do not know how best to treat them. Have heard that oak leaves make the best mulch. Are cork elm leaves good? Any information about the making of the soil and the care of the ferns will be received with pleasure. — Subscriber, Woodland.

Mountain ferns need mountain treatment—cool air and shade. Leaf mold is the best soil and you cannot have it too rich. In your neighborhood you should be able to find, under large oaks, the best of soils. Take dry leaves and the top of two or three inches of soil and work this into the garden soil where the ferns are to grow. Do not avoid taking dry leaves as well as soil for this mixture has proven more beneficial than pure rotted leaf mold. Rotted and rotting elm leaves should serve equally well. Before working mold into soil dig up as deeply as possible for ferns need free drainage.—E. B.

Napier or Elephant Grass

I have several bunches of Napier or Elephant grass. How shall I treat it and when should I cut it for planting the joints next spring?—Subscriber, San Jacinto.

Allow it to remain as it is, if possible, or transplant to warm protected spot. It will start best from ripened but fresh stems. If cut, leave until well ripened and store in cool dry place where it will not dry out. It is best bound in bundles if not green enough to mold. Cut up and plant the joints about April 1.

Pig Club Boy Asks as to Feed

I am going to join a pig club and I would like to know if Indian corn, Gyp corn and barley ground together would be advisable for growing pigs. I will also have skim milk.—Roscoe Bessey, Strathmore.

Either of the grains mentioned fed separately or mixed in equal parts will prove satisfactory. Ordinarily Indian corn has about ten per cent more value when fed to pigs than the other grains named. Therefore, prices being equal, it would be better to use corn. The choice of feeds will depend upon the current prices — use the cheapest. In this connection it is well to bear in mind that none of the grains will prove efficient when fed alone and each or a mixture of the three should be supplemented with some protein concentrate such as skim milk, tankage, linseed oil meal, fish meal, etc. If skim milk is available you have the best supplement for the grains that we know. In the feeding of skim milk it will be found that, with pigs weighing less than 100 pounds, four to six parts of milk to one part of grain will prove most economical, and with pigs weighing 100 pounds or more that the most economical ratio will be three parts of milk to one part of grain.

Drying Up Cows

I have two cows soon to freshen. One is due about the middle of November and the other the last week in December. How soon should I begin to dry them off and what is the best method?—Subscriber, Modesto.

It is quite customary to give a cow a rest of six to eight weeks before calving in order that she may gain in flesh and vigor. The most common

method of drying off cows is to cut down the amount of feed and give less of the kinds that tend to stimulate milk production and gradually stop milking the udder entirely dry. If she is not giving over 20 pounds per day and does not have a tendency to udder trouble it is safe to milk but once a day and when reduced to ten pounds per day to discontinue milking. In drying off a cow care should be exercised in watching the udder in order to guard against udder trouble.

ARGENTINE COTTON

Trade Commissioner G. S. Brady, Buenos Ayres, reports that a German company has been formed to stimulate the growth of cotton in Argentina and thereby release Germany from dependence upon American raw cotton. The company is said to be made up of men directly interested in cotton goods manufacture, and the intention is not only to encourage Argentine production of cotton but also to create extensive German owned plantations in the north of Argentina.

Canvass of labor needs in cotton fields of San Joaquin Valley is being made by the Valley Fruit Growers Association, the Bakersfield Cotton Growers Association and W. B. Camp, cotton specialist of the U. S. bureau of plant industry.

Don't Miss the Big Money

THE virgin soil that the stumps keep out of cultivation in the best soil you have. You can pull out an acre or more of stumps in a day at a cost of from 8c to 5c per stump. No matter how big or tough the stump, it walks right out when the Hercules gets hold of it. With the stump puller all the long tap roots that spread out in all directions. The land is left ready for cultivation.

HERCULES Triple Stump Puller

Let us send you proof that thousands of farmers have made big money by the Hercules. Get our money saving proposition.

THREE BIG HEREFORD DAYS STATE FAIR GROUNDS, SACRAMENTO, CAL.

Are you going to get in on the ground floor with HEREFORDS? Through sheer merit this breed has forged ahead steadily in California and other western states, and this year for the first time, in the biggest beef cattle show ever staged at Sacramento, HEREFORDS outnumbered any other beef breed. There's a real reason for this increasing popularity, and it is measured by a dollars and cents standard. The three public sales listed below are full of opportunities to buy real breeding HEREFORDS.

Thursday, November 4

45—Registered Herefords—45

This is the regular fall offering of picked tops, known more popularly as the "Association Sale." Hereford breeders all over the coast have been striving constantly toward the improvement of their herds, and it is only natural to expect advancement in quality in each succeeding sale of picked cattle.

Foremost herds of the west will be represented in this sale, and the buyer who wants to add one or more extra choice animals to his herd, or the beginner who wants to start with that sort of foundation will find ample range of selection in this offering.

Sale under auspices of

PACIFIC COAST HEREFORD CATTLE BREEDERS ASSOCIATION

J. I. Cazier, Pres., Wells, Nevada. J. A. Bunting, Sec., Mission San Jose, Calif.

Friday, November 5

NEVADA HEREFORD RANCH

WILL SELL

55—Registered Herefords—55

Beau Blanchard 76th

HARRIS STANDARD 2ND is as well bred as any bull in the United States and is a wonderful sire. Our show herd for the past three years has shown some evidence of his breeding ability, but to be fully appreciated you must see the uniform excellence of his entire get on our ranch. His get have never been defeated in the Get of Sire class.

IN THIS SALE we will sell over 30 heifers sired by him, and many of them are safe in calf to BEAU BLANCHARD 76TH. Others will be bred to ABE MISCHIEF, by Mousel's mighty Beau Mischief, and to BOCALDO 21ST, by Hazlett's Grand Champion, Bocaldo 6th.

This is the first individual public sale offering made by NEVADA HEREFORD RANCH, and we believe the quality of the offering to be a credit to this herd, and one in which the buyer may rightly expect to secure correct breeding animals.

This herd is widely known as one of the largest and most richly bred collections of the breed in the west. Especial attention has always been given to the maintenance of a healthy herd, and this herd is now in line for Federal accreditation.

At 1920 California State Fair, BEAU BLANCHARD 76TH was Grand Champion in the greatest Hereford Show ever staged at Sacramento, and his young son PILOT, out of a Harris Standard 2nd dam, owned and exhibited by Wm. Briggs, Dixon, was first junior bull calf and Junior Champion.

Four of the first calves sired by BEAU BLANCHARD 76TH, and out of Harris Standard 2nd dams, bid well for high honors in the individual classes, and in the Get of Sire group stood second only to the get of Harris Standard 2nd. Remember that in this sale a large number of HARRIS STANDARD 2ND heifers sell bred to BEAU BLANCHARD 76TH.

Harris Standard 2nd

Owners:

J. H. CAZIER & SONS CO., WELLS, NEVADA.

Otis Cordell, Herdsman

Saturday, November 6

50—Registered Herefords—50

This offering rounds out the greatest Hereford selling event yet attempted in the breed's affairs in the west, and fits into the three days offerings especially well.

There will be a liberal number of cows, practically all young, and a number of them with calves at foot by richly bred sires. The cows themselves represent some of the most highly approved Hereford families and may well be rated as desirable breeding females of great usefulness.

The offering contains an especially interesting lot of heifers of substantial breeding, the sort that promise to develop into desirable and profitable breeding matrons.

Owners:

BARNGROVER & WRIGHT, SANTA CLARA, CALIF.

Every animal in the three offerings listed above is positively guaranteed to be a breeder; every animal over six months old tuberculin tested and individual certificates furnished.

For catalog of any or all sales, write the management.

The Kings County Fair

By J. P. Bennett

THE Kings County Fair Association held its seventeenth annual meeting at Hanford, September 20 to 25.

The fair from a standpoint of attendance was hardly up to expectations. However, the various displays were of excellent quality and were a strong testimonial to the high standing of Kings County as an agricultural and livestock center.

The large fruit crop now being gathered in this vicinity had much to do with keeping the attendance down, many people feeling too busy to attend the fair at this time. However, the men in charge did their part in providing a first class show that was well worth the effort spent in the advancement and upbuilding of the community.

The Cattle

A very creditable display of cattle was made. In fact, this was the strongest feature of the livestock show. Several herds were in competition and included many state fair winners.

The Holsteins were most strongly represented in numbers with Jerseys playing a close second. John Troup, Santa Barbara, judged the cattle in a highly capable manner.

A. B. Comfort, Fred Ross and J. W. Arthur, Hanford, showed Holsteins. J. E. Thorp, Lockford, and A. A. Perkins, Tulare, showed Jerseys. Chas. L. Weaver, Tulare, and E. B. McFarland, San Mateo, were the only exhibitors in the Shorthorn and Ayrshire classes.

The awards follow:

Holsteins

Aged bull—1, Arthur on Prince Gelsche Korndyke.

Junior yearling bull—1, Comfort on De Kol Segis Wayne.

Junior yearling bull—1 and 2, Ross on Rossmead Johanna Yerba and Rossmead Westport Lad. 3, Comfort on De Kol Juliana Mead.

Senior bull calf—1, Arthur on Rossmead King De Kol. 2 and 3, Comfort on Duke Riverside Wayne and King La Polka Lad.

Junior bull calf—1 and 2, Arthur on Creamcup Fidessa Burke and Creamcup Gelsche Walker.

Aged cow—1 and 2, Arthur on Alma Goldstone Girlie and Copa De Ora Holland Bawn. 3, Comfort on Peg o' the Mist Holland.

Two year old cow—1, Comfort on Juliana Pietertje Segis. 2, Arthur on Rossmead Bell Juliana. 3, Comfort on Wisconsin Ormsby De Kol Segis.

Senior yearling heifer—1 and 2, Arthur on Rossmead Colantha Rose and Rossmead Wayne Holland. 3, Comfort on Dora Snowflake Juliana 2nd.

Junior yearling heifer—1, Arthur on Lady Constance Beauty.

Senior heifer calf—1, Comfort. 2 and 3, Arthur on Rossmead Juliana Bess and Rossmead Bell Juliana Walker.

Junior heifer calves—1 and 2, Comfort. 3, Arthur.

Aged herd—1, Arthur.

Breeder's young herd—1 and 3, Comfort. 2, Arthur.

Get of sire—1 and 3, Comfort. 2, Arthur.

Produce of dam—1, Arthur. 2, Comfort.

Senior and grand champion bull—Arthur.

Senior champion bull—Arthur.

Senior and grand champion cow—Arthur.

Junior champion cow—Comfort.

Jerseys

Aged cow—1, Thorp on Nana of Mossdale. 2, Jenkins on Irene's Cadora.

Two year old cow—1, Thorp on Goldie's Nehalem Cowslip. 2, Jenkins on B. S. V. Leora. 3, Thorp on Bonnie of Mossdale 2nd.

Senior yearling—1, Thorp on Violet of Mossdale. 2 and 3, Jenkins on Golden G. Blossom and Golden G. Lilly.

Junior yearling—1 and 2, Jenkins on G. G. Louise and G. G. Beth. 3, Thorp on Queen Bess of Mossdale.

Senior heifer calf—1 and 2, Thorp on Girlie of Mossdale and Jolly Emerto of Mossdale. 3, Jenkins on Gertie's Golden Mary.

Junior heifer calf—1, Jenkins on G. G. Nana. 2, Thorp on Ramona of Mossdale. 3, Jenkins on G. G. Clara.

Aged bull—1, Thorp on Jolly Senator Raleigh. 2, Jenkins on G. G. Victor.

Two year old—1, Jenkins on G. S. V. Financial Owl.

Senior yearling—1, Thorp on Biddy's King of Mossdale. 2 and 3, Jenkins.

Junior yearling—1, Jenkins on G. G. King Pogis. 2, Thorp.

Senior bull calf—1 and 2, Jenkins on G. G. Victor Lad and G. G. Tony. 3, Thorp on Fairy Boy of Mossdale.

Junior bull calf—1, Thorp on K. F. Buttercup King. 2 and 3, Jenkins on G. G. Fox and G. G. Rex.

Aged herd—1, Thorp. 2, Jenkins.

Young herd—1, Jenkins. 2, Thorp.

Calf herd—1, Jenkins. 2, Thorp.

Get of sire—1, Thorp. 2, Jenkins.

Produce of dam—1, Thorp. 2, Jenkins.

Senior and grand champion bull—Thorp on Jolly Senator Raleigh.

Junior champion bull—Thorp on Biddy's King of Mossdale.

Senior and grand champion cow—Thorp on Nana of Mossdale.

Junior champion cow—Jenkins on G. G. Nana.

The Swine Show

Kings County has long been noted for pork production and the strong interest taken in pure bred swine, especially Poland Chinas. The show this year was on a par with previous shows. The pens were full although only two breeds were represented, Poland Chinas and Durocs.

Bassett Bros., Fred Ross, C. A. Vaughn, W. L. Haag & Son, all of Hanford, and H. D. McCune of Lemoore showed Poland Chinas; J. E. Thorp, Lockford; D. G. Cummings & Son, Visalia, and F. B. Ellis, Exeter, showed Durocs.

C. R. Doty, Los Angeles, judged both breeds in fairly satisfactory manner.

Poland Chinas

Aged boar—1, Bassett on King's Timm. 2, Ross on Big Timm. 3, Bassett on King's Gerstdale Jones.

Senior yearling—1, Haag & Son on Lendoris Liberty Bond. 2, Bassett on Model Giant.

Junior yearling—1 and 2, Bassett on The Comet and California Inspiration. 3, McCune on Pacific Prospect.

Senior boar pig—1, Haag & Son on Lendoris Liberator. 2, Fred Ross.

Junior boar pigs—1, McCune. 2 and 3, Bassett.

Aged sow—1, Bassett on Columbus Lady. 2, McCune on Edith Rose. 3, Bassett on Hopeful.

Senior yearling—1, Ross on Mollie's Ideal. 2, Bassett on Joe's Big Lady.

Junior yearling—1 and 2, Bassett on Gerstdale's Best and Miss Bob Orange.

Senior sow pig—1 and 2, Bassett on Timm's Glantess and Jumbo Girl. 3, Haag & Son on Lendoris Queen.

Junior sow pig—1, Bassett on Orange Glantess. 2, McCune. 3, Bassett on Miss Rainbow.

Produce of sow—1, Haag & Son. 2, Bassett. 3, McCune.

Aged herd—Bassett.

Young herd—Bassett.

Champion boar—Bassett.

Champion sow—Bassett.

Durocs

Aged boar—Ellis on Major Disturber.

Junior yearling—1, Cummins & Son.

Senior boar pig—1, Cummins & Son on Big Orion King.

Junior boar pig—1, Thorp on Mossdale Sensation. 2, Ellis on Tulare Pathfinder. 3, Thorp on Sensation of Mossdale.

Aged sow—1, Cummins & Son on Big Orion Wonder. 2, Ellis.

Senior yearling—1, Cummins & Son on Golden Sensation.

Senior sow pig—1 and 3, Cummins & Son. 2, Ellis.

Junior sow pig—1, 2 and 3, Thorp.

Get of sire—1, Thorp. 2, Ellis. 3, Cummins & Son.

Produce of dam—1, Thorp. 2, Ellis. 3, Cummins & Son.

Pair of pigs—1, Thorp. 2, Ellis. 3, Cummins & Son.

Champion boar—Ellis on Major Disturber.

Champion sow—Cummins & Son on Golden Sensation.

The Sheep

The Corriedale Sheep Co., Hollister, was the only exhibitor in this department and had very good exhibits of Corriedales, Leicesters, Southdowns and Shropshires and was awarded all premiums.

WHOLE MILK VS. SKIM MILK

An Iowa correspondent writes in Wallace's Farmer of Des Moines as to comparative values of whole sweet milk and separated milk for hogs:

"Whole milk has almost exactly the same composition as separated milk except that in each hundred pounds there are three and a half to four pounds of butterfat as compared with scarcely any butterfat at all in separated milk. Each pound of butterfat in the whole milk has a feeding value when fed to hogs of perhaps eight or ten cents, or, in other words, ordinary whole milk has a feeding value for hogs about 60 per cent greater than separated milk. Inasmuch as butterfat can be sold at the creameries for about five times as much as it is worth when fed to hogs, no one except possibly an occasional pure bred man feeds whole milk to hogs. Even pure bred men have found that whole milk has no decided advantage over skim milk which is properly supplemented with corn."

Another writer in the same publication says:

"We do not know of any experiments in the United States along this line, but we remember seeing in an Australian publication an account of an experiment which indicated that for pigs under 70 pounds in weight skim milk had a feeding value 50 or 60 per cent greater than for fattening hogs over 100 pounds in weight. Everyone knows that skimmilk is peculiarly worth while with pigs which have just been weaned. In fact, under some conditions we can see how skimmilk at this time might be worth two or three times as much a hundred

as with fattening hogs. For fattening hogs, 100 pounds of skim milk is customarily worth the equivalent of about ten pounds of corn plus five pounds of tankage."

A PLAN TO MOVE THE WOOL CROP

When congress reconvenes in December the American Farm Bureau Federation will urge immediate passage of a bill establishing a credit with Germany and her former associated countries equal in amount to the net proceeds of the sale of alien property in this country during the war. The money received by the alien property custodian during the war amounted to nearly a billion and a half dollars and the remainder now in the United States treasury after various claims and expenses are allowed will run well up toward a billion dollars. Sooner or later this money must be turned over to Germany and her associates and now is the time the central European countries can use it to best advantage. The raw materials which this money would buy in this country are the very things needed by Germany to start and operate her factories.

A careful survey of the world's wool supply gathered from the best available sources—some direct by cable—shows that the world's wool stocks are somewhat greater than usual. Where the usual holdings prior to 1919 amounted to about half a year's supply, or around a billion and a quarter pounds, the stocks now available seem to amount to about a full year's supply. But nearly all of this surplus is of the coarser grades. Apparently there is no real surplus of the finer grades of wool—the kinds which we use in this country to manufacture our clothing. The accumulation of coarse wool stocks seems to be a direct result of the inability of Germany and Austria to buy and consume their usual quotas. These markets have been practically closed for a long time now, and as a result coarse wool stocks have accumulated in all parts of the world, to depress the fine wool market also. Sending large quantities of coarse wool into German mills, where it is badly needed, would have a very wholesome and stimulating effect upon both the coarse and the fine wool markets the world over.

DISEASE PREVENTION IN ANIMALS

Increased suffering to farm animals from legalized inability to carry on experiments to discover causes and remedies of animal diseases will follow in California if the proposed anti-vivisection measure, number seven on the November ballot, is adopted, according to G. M. Haring, professor of veterinary science and director of the agricultural experiment station of the University of California.

In a letter to R. N. Wilson, secretary of the agricultural legislative committee in Sacramento, Professor Haring declares that if the act becomes law it will seriously hamper projects conducted by the agricultural experiment station in human and animal nutrition and stop work on five of the seven projects in which members of the division of veterinary science are engaged at Berkeley, Davis and Petaluma.

"Such a situation would be especially injurious to the swine raising industry, the security of which is now based on the use of anti-hog-cholera serum and virus. Even the poultry industry would be injured in that the manufacture of chicken pox vaccine would be stopped.

"Prohibition of the manufacture of vaccines against blackleg and anthrax, brought about by the bill if adopted, would render useless one of the greatest advances in eliminating unnecessary losses and stabilizing the beef production industry.

"Further reason for rejecting the measure is seen in the absolute prohibition of investigations on bacillus botulinus, which has been held responsible for the many cases of food poisoning, and the resultant wiping out of the olive industry of the state.

"It is necessary to use guinea pigs or chickens or other animals to determine whether canned goods or laboratory samples contain toxin. Should the measure pass it will be necessary to transfer the bacillus botulinus investigations and the manufacture of anti-toxin to another state.

Mammoth Dispersal Sale Rosamaines Rancho, Riverside, Cal. OCTOBER 19-20-21, 1920

Gerben Abbekerk Maid and Four of Her Daughters

GERBEN ABBEKERK MAID three times above 30 lbs. butter in 7 days, twice above 34 lbs., dam of nine living sons and daughters, six daughters and three sons, only 9 years old, and there are 105 of her descendants in this sale. She is a daughter of Sir Skylark Ormsby Hengerveld, who has the largest list of 30 lb. daughters of any bull yet developed in California. She can rightfully be called one of the world's great dams.

Tuesday, October 19

Promptly at 9 A. M. the dispersal opens with the sale of ROSAMAINES RANCHO in two parcels.

PARCEL NO. 1 — 235 acres with Rancho buildings and improvements costing over \$200 per acre. 100 acres bottom pasture; 60 acres fine alfalfa; 40 acres corn; two motor equipped pumping plants with unfailing water supply; all buildings electric lighted and sewerage; absolutely one of the greatest livestock breeding plants in the west.

TERMS ON PARCEL NO. 1—One third cash, balance six equal annual payments, interest 7 per cent, 2 per cent discount for cash on deferred payments.

PARCEL NO. 2—397½ acres adjoining Parcel No. 1 on the north. All first class vineyard, orchard, or alfalfa land, in crop regularly, with an abundance of cheap water. A first class investment either in connection with or separate from the balance of the Rancho.

TERMS ON PARCEL NO. 2—One half cash, balance in four equal annual payments, interest 7 per cent, 2 per cent discount for cash on deferred payments.

Immediately following sale of the Rancho we will sell

90 big red grand Shorthorn cows, 3 to 5 years old, fat and heavy with calf

18 registered Percheron mares and stallions

50 registered Duroc-Jersey hogs

1800 White Leghorn hens and pullets

A small herd of grade dairy heifers

All of the implements and equipment.

ARALIA MAID, 23.61 lbs. butter in 7 days, 86.49 lbs. in 30 days at 4 yrs. 1 mo. She is by Prince Aralia Walker, son of Prince Gelsche Walker and the 1100 lb. butter cow Aralia De Kol 3d, whose dam also made over 1100 lbs.

ROSAMAINES ORMSBY ABBEKERK, sired by a 32 lb. son of King Pontiac Netherland Segis 3d.

ABBEKERK PONTIAC, 24.24 lbs. butter in 7 days, 85.65 lbs. in 30 days at 3 years, 4 mos. She is by King Pontiac Netherland Segis 3d.

ROSAMAINES DUCHESS ORMSBY, a full sister to Abbekerk Pontiac. Due to freshen before sale.

Wednesday & Thursday October 20-21

We will disperse the splendid herd of

150 Registered Holsteins

Including:

KING PONTIAC NETHERLAND SEGIS 3D, the senior herd sire. By a son of King of the Pontiacs and out of Gerben Abbekerk Maid, whose picture and records are shown above.

SIR ORMSBY SKYLARK RAUWERD, the junior herd sire, by the same sire as the world's record cow Duchess Skylark Ormsby, and out of a 34 lb. dam by a half brother to King Segis, second dam a richly bred 29 lb. cow. He is a show bull.

GERBEN ABBEKERK MAID and her four daughters shown in the illustrations.

105 DESCENDANTS OF GERBEN ABBEKERK MAID, a very choice lot of uniform breeding.

50 FEMALES with official records up to over 34 lbs. butter in 7 days.

43 DAUGHTERS of King Pontiac Netherland Segis 3d, with records up to 29.91 lbs. butter in 7 days for a 3 year old.

30 FEMALES bred to King Pontiac Netherland Segis 3d.

50 FEMALES, or more, bred to Sir Ormsby Skylark Rauwerd, many of them daughters of the senior herd sire.

SEVEN DAUGHTERS of Sir Skylark Ormsby Hengerveld, sire of Gerben Abbekerk Maid.

ONLY NINE animals in entire herd six years old or over, and ONLY TWELVE OVER 4 YEARS OLD.

Every animal positively guaranteed to be a breeder; every animal over six months old tuberculin tested and sold subject to retest by the buyer, except as announced at sale.

ROYAL I AM

Junior Champion and Reserve Grand Champion
at Los Angeles Livestock Show, 1920

Royal I Am is a son of Great I Am, grand champion Duroc boar of Nebraska, 1920.

We are fortunate in being able to offer some choice fall Royal I Am pigs.

Address

GRAHAM-HENSHAW

Lancaster, California

Italian Vineyard Company

Guasti Berkshires

Weaned pigs, both sexes, from sows that farrow large litters and raise them. Priced at a figure any farmer can afford and that will show him a profit.

Alex. Wilson, Supt., Guasti, Cal.

Bastanchury
Better
BERKSHIRES
LA HABRA, CAL.
E. N. WHITTEMORE, MGR.

The boar is 60 per cent of the herd. We showed the 1st prize aged boar at the state fair this year. We have some of his pigs, both sexes, for sale at reasonable prices.

The Fresno Fair

By J. P. Bennett

The annual Fresno district fair was held at Fresno September 28 to October 2. It was successful in every way. The livestock show was one of the best in the history of the county and under the capable direction of Superintendent Fred Gatewood everything went very smoothly.

The horticultural and agricultural departments were extraordinarily good. The exhibits of autos, tractors and farm machinery were equalled only at the state fair. Large crowds were in attendance not only to see the livestock but to witness the auto races and other attractions that usually draw a crowd.

The Cattle Show

The cattle show was one of the strongest held this season outside of the state fair. The dairy breeds led in point of numbers with good herds of Jerseys, Holsteins, Ayrshires and Milking Shorthorns. There was very keen competition in many of the classes. Prof. W. E. Tomson of the university farm, Davis, placed the awards.

R. L. Holmes, Modesto; Harry Hill, Riverdale, and Santa Maria Stock Farm, showed Holsteins.

Guy Miller, Modesto; J. E. Thorp, Lockeford and A. A. Jenkins, Tulare, showed Jerseys.

Chas. L. Weaver, Tulare, and Murphy Bros., Perkins, showed Milking Shorthorns.

The big feature of the dairy show was the competition for the best five head of dairy cattle owned by one exhibitor. The prizes offered each year, \$200, \$150, \$100 and \$50, always bring out a strong show. This year R. L. Holmes of Modesto was first, E. B. McFarland, San Mateo, second; J. E. Thorp, Lockeford, third, and Guy H. Miller, Modesto, fourth.

Holstein Awards

Aged bull—1, R. L. Holmes. 2, Santa Maria Stock Farm.

Two year old—1, Harry Hill.

Senior bull calf—1 and 2, R. L. Holmes.

Junior bull calf—1 and 2, R. L. Holmes.

A. J. Van Cleef, Riverdale, Cal.

SOME FACTS FOR THE PORK PRODUCER

Experimental and demonstration work by the University of Missouri college of agriculture has shown:

That the proper use of supplementary feeds like tankage, linseed oil meal or wheat middlings increases profits derived from swine feeding. With corn worth \$1.20 per bushel, a ton of tankage saved corn to the value of \$203.64; likewise, a ton of linseed oil meal was worth \$113.80 and wheat middlings \$45.80.

That fattening hogs gained 23 per cent faster on a ration of corn and middlings than on corn; 32 per cent faster on a ration of corn and linseed oil meal than on corn alone; 32.6 per cent faster on a ration of corn and tankage than on corn alone; 38.5 per cent faster on a ration of corn and soy beans than on corn alone; 17.6 per cent faster on a ration of corn and germ oil meal than on corn alone.

That fattening swine gain 7.4 per cent faster when self fed than when hand fed the same ration.

That self fed hogs require no more

that the mice were not affected the experimenters ate freely of the cheese without bad results. It has been of interest to note that the gases used were successful in destroying the cheese parasites when they were on the surface of the cheese or in the storage rooms, and that they have not injured the palatability or wholesomeness of the cheese.

It has been of value to use mice in this feeding experiment, showing the safety of such material for human beings. Investigations of this character would be illegal if the Initiative Measure No. 7, prohibiting the use of animals for experimental purposes should not be voted down.

IT WOULD NOT LAST

The recent merger of the New York Herald and Sun, which resulted in the closing of the Herald office, caused no little disturbance among the newspaper men affected, several of whom had spent a lifetime at the desks they then held.

An old copyreader on the Herald, who had been on the desk for a little more than 40 years, threw down his blue pencil in disgust at the announcement that the old shop would go out of business.

"I knew darn well when they got me to take this job," he said petulantly, "that it would not be permanent."—Exchange.

SHE WAS FROM BOSTON

An observant young lady from Boston, on her first trip West, saw when crossing the Plains a herd of branded cattle.

"Oh, see the engraved cows!" she remarked enthusiastically.—Everybody's.

Johnson's Defender Jr.

Heads my herd of carefully selected sows. He should be seen to be appreciated. I can spare a few choice females or young stock either sired by or mated to this good boar. You will be pleased with any purchase made from me.

feed to produce a given amount of gain than when hand fed. Hence the practice can be recommended as a method of decreasing labor.

That when each feed is placed in a separate self feeder the hogs will choose the different feeds so that the gain will be both rapid and economical.

That the saving of grain resulting from the use of pasture crops is from 20 to 50 per cent.

The kind of forage crops best adapted for hog pastures by showing that clover produced 567.7 pounds of pork per acre; rape and oat forage produced 354.1 pounds of pork per acre; rape, oats and clover forage produced 414.6 pounds of pork per acre; sorghum forage produced 275 pounds of pork per acre; cow pea forage produced 212.7 pounds of pork per acre; soy bean forage produced 117.6 pounds of pork per acre; rye grain forage produced 211.7 pounds of pork per acre.

That a ration of corn alone is too expensive for producing pork, but that it must be supplemented by feeds like tankage, linseed oil meal, soy beans, germ oil meal, semi-solid buttermilk, skimmilk, wheat middlings or fish meal.

CHEESE PARASITES DESTROYED

Old cheese kept in storage is sometimes injured by attacks of cheese mites and by skippers which grow from the egg of a fly. This fly will attack cheese if permitted to live in such rooms. A cooperative experiment has been carried on for several months by the divisions of entomology and dairy industry in determining procedure that may be followed in destroying such insects without going to the expense of removing the cheese from the curing rooms and still maintaining the cheese in a condition safe for human consumption.

These experiments have included the use of hydrocyanic acid gas and carbon disulphide for fumigating, and the question of importance has been whether or not the cheese was injured by contact with the gases. In order to demonstrate this point the cheese was fed to mice immediately after it was removed from the fumigating room with no bad effect, and after noting

The McCarty-Shinn-Elliott Sale

The joint sale of Poland Chinas from the herds of Alex. D. McCarty, Modesto, Hugh C. Shinn and A. J. Elliott, Tulare, was held at the fair grounds at Tulare, Monday, September 27. The offering was an exceptional lot of Poland Chinas. While the hogs sold did not bring anything like their real worth, still they sold at a time when it was thought impossible to dispose of such an offering and demonstrated the fact that good stock will always bring the buyers.

It would be hard to find three more popular breeders than these three men and their high standing as well as the high class of their stock had much to do with helping the sale along. There were rather too many hogs listed for the buyers present, and until they were supplied the sale was very snappy. H. K. Dickson, Kern County Pig Club leader, was on hand with several of his club boys from Bakersfield and secured several of the best lots sold. H. L. Graham, Tom Edmundson, San Fernando, E. B. Peers, Owensmouth, and Earl Sturgis of the Santa Anita Rancho were there with bells on and not only secured some 12 head but, together with the Kern County support, made it possible to sell practically the entire offering. Johnny Glusing, Winton, who showed the grand champion boar at Sacramento, bought quite a number of choice sows to mate with his good boar.

The top of the sale was Perfect Beauty 2nd, prize junior yearling at the state fair. She was purchased by Lloyd and Tolinton, Santa Rosa, at

\$500, and after the sale resold to A. J. Elliott.

Paul B. Long, Tulare, secured the next top in lot 38, a great senior gilt sired by Hercules, at \$450, a litter mate going to Merle Sholts at \$260.

The average on 45 head sold was \$125.

Col. Geo. W. Bell was on the block and assisted by Fred Gatewood, Fresno, and E. A. Mead, Tulare, sold the offering in a very high class manner.

Following is a list of sales:

1. A. J. Elliott, Tulare, \$210.
3. A. J. Elliott, Tulare, \$500.
4. Tom Edmundson, San Fernando, \$65.
5. Johnnie Glusing, Winton, \$85.

40. Santa Anita Rancho, \$65.

Better Livestock---Better Homes

As a rule, better stock means better homes and better homes better stock. There are exceptions, of course, but when you think of the one it is very likely that you think of the other also.

Even if you are making no effort to grow high grade stock or purebreds you are apt, after taking more pride in your home and your buildings, to take better care of the ordinary stock on your farm. An expert can get better results with less fuel from an old and poor heating plant than a slipshod person will get from a high grade outfit. The most money is not always made with the highest grade or purebred animals. There are some men who make really good returns by handling good grade animals in an intelligent, practical way.

The thoughtful farmer knows that the only profitable animal is the well cared for animal. Many a man who is not at heart very kind has learned the lesson—so far as cattle are concerned—that the exercise of consideration and gentleness means the saving of dollars. Very few men are mean enough to be mean when they know it hurts their pocketbooks. Any one who gets a notion that it pays to give the best possible attention to the animals he has, even if poor, will not need much argument to convince him that better bred stock will yield him still better results.

In some of the older settled regions of the United States there are men who have stock that is bred well enough but has been handled in so shiftless a way that the animals might just as well be scrubs. In some of these cases the advent of an "up and coming" neighbor has worked a change of conditions.

In the more progressive communities organizations, county breeders associations, extension workers of universities and county agents have worked wonders and produced splendid results. Boys and girls livestock clubs have been able to bring reforms that no other agency could reach. Occasionally the older men who have never had very good ways and have become set in them are reached only through the kiddies.

About the first thing that may be done toward getting better stock and better homes is to check up on conditions as they are and see the many ways in which they may be improved. But most people are not able to make the best of what they have. A man who lets his buildings and fences fall down, pays no attention to rotation of crops, lets his manure leach away into

creeks, forgets or neglects to feed and care for his stock regularly, and lets his wife go out to pump water and split wood is apt to instill into the minds of his children the idea that nobody is ever a farmer who is smart enough to be anything else. On the other hand, one who maps out his course and lets no season go by without making some improvements in his way of doing things will surely find himself getting better animals and gaining in self respect and importance, not only to himself but to the community as well.

Gradual, continuous livestock improvement has been practiced for many years by the most successful livestock farmers everywhere. Improving livestock—grading up, eliminating the scrub, etc.—is merely following the practice of these successful men who for years have been keeping the best and "breeding the best to the best." It is well known that a good cow, for example, bred to a good purebred bull will usually produce a good calf. It is also well known that a better bull bred to a better cow will produce a better calf, and this applies to other kinds of livestock.

It was to emphasize this important practice that the United States department of agriculture, in cooperation with the different state agricultural colleges, inaugurated the "Better Sires—Better Stock" crusade to raise the general quality and usefulness of our animals. Not only the scrub sire is to be eliminated but the undesirable sire as well, even though he is a purebred.

A SHEEP WITH REAL FUR

The Karakul sheep imported from Siberia some years ago is making good in his adopted country, California. This sheep is especially noted for its fur, and as a result a new fur industry is now being developed in our state.

Although this sheep is especially prized for his fur, the mutton is good for food and the fat is very valuable. It has been claimed that a more vigorous sheep is produced by crossing the Karakul with a Mexican wool sheep.

Hawaiians are getting interested in milk goats, and a San Jose paper chronicles the sale of 57 Toggenburgs by the Ivy Lodge Estate, all of which were shipped on one vessel on September 4. It is said this is the largest single shipment yet made out of the state.

Veterinary

Bloody Milk

We have a three year old Holstein helper that is giving about six gallons of milk a day but the milk from one quarter of udder (right front) is quite bloody and has been for some little time. She has been fresh since June 2, and shortly after freshening she had the same trouble for a few days but apparently got entirely over it. She appears perfectly well and normal so far as I can tell, except for this. Have been milking that quarter separately, and the milk from the balance of the udder does not leave a trace of blood in the separator bowl. The teat in this quarter has always milked harder than the others, is a little larger and lately has a small lump or kernel like growth (size of a pea, perhaps) within it. If you can give us any assistance in correcting this trouble we would appreciate it greatly, as we are a hundred miles or more from the nearest veterinarian.—Subscriber, Wagner.

Bloody milk may be caused by a number of things. Often an injury or bruise on the udder causes the rupture of some blood vessels. It may be that in milking this quarter, since you say it is more difficult to milk than the others, the udder may have been bruised and the small lump within it may be the result of some injury that did not heal properly. It may be, however, a small tumor like growth in the udder which may be responsible for the bloody colored milk. I would suggest that you treat this quarter by applying hot and cold cloths intermittently just as hot as possible without burning. This can be done for about 15 minutes twice a day or even once a day for a few days, after which the udder may be carefully massaged with sweet oil or olive oil containing a little turpentine. Another remedy made for massaging the udder is iodine ointment one part, soft soap two parts. It is very essential that the udder be handled carefully and not bruised.—G. E. G.

Goat Gives Bloody Milk

What can be done for a goat that gives bloody milk? There seems to be sediment in it also. When she had her first kid, milk was bloody, but after a time cleared up. This time it stays slightly bloody all the time. If I remember right, it had nearly cleared up when she slipped and partly fell on her bag on a box and since then have noticed a small, somewhat hard lump up high next her body. Also, two months ago she was bitten by dog in same place. Both times milk flow was affected for few days. She seems to feel well in every way, but does not give as much milk from that side as before.—Subscriber, El Cajon.

The indications show udder injury, probably caused at the start by the udder being inflamed and swollen, causing rupture of some of the small blood vessels. Injuries of this kind will naturally cut down the milk flow. The lump on the udder is probably the result of failure to heal properly after the injuries. I would suggest that you apply hot and cold cloths intermittently for about ten or 15 minutes twice a day. These hot cloths should be as hot as possible without danger of burning. After this application it would no doubt be well to massage the udder gently with sweet oil or olive oil to which a little turpentine has been added. Great care should be exercised so as not to injure the udder.—G. E. G.

Rancid Butter

Have Jersey cow and recently butter has been getting rancid and bitter soon after churning. Feed is one of best of dairy mashes with bran, beet pulp and alfalfa.—Subscriber, Chula Vista.

Rancid butter is usually caused by volatile fats decomposing. In most cases, however, feed is responsible. From the feed you mention there should be no difficulty of this kind. However, if the cow is allowed to get any pasture some undesirable weeds might easily cause this trouble. In other cases this annoyance is increased by utensils that have not been properly sterilized. I would suggest,

therefore, that if the cow is getting any pasture she be taken from it or changed and that the utensils used in handling the milk be sterilized more carefully. These things might be of some assistance.—G. E. G.

A pair of very typy brood sows are Golden Model Lady 1st and 2nd. These sows were bred by Meyers and they were futurity winners

What One Dairyman Learned About HEBE

He had heard many conflicting stories regarding this new food product—some that it would injure and some that it would benefit the dairying industry. Desiring to form his opinion from facts rather than hearsay he started out to investigate. During the course of his investigation he called at the offices of the Hebe Company and asked some very searching questions.

"I have been told," he said, "that HEBE is being marketed as evaporated milk or a substitute for it. Is this so?"

"It is not," was the reply, "HEBE is produced, labeled, advertised and marketed as a distinctive dairy product for use in the home as a cooking and baking ingredient."

"But some dealers sell it as, or for evaporated milk" he objected.

"There are such cases of misrepresentation," was the reply, "but they are becoming fewer each day due to the widespread campaign of education which the Hebe Company is conducting by which the consumer is learning the exact nature and uses of HEBE and the dealer is being made to realize that his greatest profit lies in selling the product for just what it is." He was shown the methods employed by the Company to correct misrepresentation on the part of the distributor and misuse by the consumer. His attention was directed to the label which specifically states what HEBE is and its uses.

"Is not the real purpose of HEBE to develop a market for cocoanut fat rather than a market for skimmed milk?" he asked—

"Decidedly not," was the reply. "To make every hundred pounds of HEBE it takes 210 pounds of skimmed milk and only 7.8 pounds of cocoanut fat and this small amount of non-dairy ingredient is used for the sole purpose of supplying the large amount of dairy ingredient with the shortening and other elements necessary to make it desirable as a cooking medium. It is no more true that the skimmed milk is used as a vehicle to bring cocoanut fat to market than is it true that butter is used to bring salt or ice cream to bring gelatine to market. These non-dairy ingredients all serve the same purpose—to make the dairy ingredients better for the uses intended."

"How will the sale of HEBE benefit the dairy industry?" was the next question.

"By developing a human food market for skimmed milk" was the reply. Government reports were produced which showed that yearly over 30 billion pounds of skimmed milk was not finding its natural and most profitable market as a direct human food. The statements of government and other authorities were read to show the need of creating such a market if the dairy industry is to best serve humanity and itself. HEBE, it was pointed out, is one means to this end.

"How will this benefit all dairymen?" he next asked.

"That which benefits the industry as a whole must benefit each individual member," he was answered. "Every can of HEBE sold and every bit of advertising put out is helping to educate the public to a greater use of dairy products. The ice cream industry is a parallel case. Every dairyman, whether he ships his product to an ice cream factory or not benefits by the increased demand caused by the use of nearly 4 billion pounds of milk yearly by the ice cream manufacturers."

"Why are you advertising HEBE in the farm papers?" he asked.

"For no other purpose" he was told, "than to give other dairymen as we are giving here to you the facts of HEBE in its relation to the dairy industry so that these men may have a complete and accurate knowledge of the subject and form their opinion of our product and our company from facts and not from prejudice or from mis-statements on the part of wilful or uninformed persons."

At the close of the interview the dairyman visitor expressed his satisfaction at the frank and straightforward answers given to his questions and made this significant remark "If every dairyman who now sees in HEBE a menace to his business could have the opportunity of going into this subject with you as thoroughly as I have, I am sure he would see HEBE in an entirely different light."

We will be glad to discuss HEBE with any person interested, either by personal interview or by correspondence. Write for our booklet "The Missing Third" which discusses in detail the relation of HEBE to the dairying industry. Address 3073 Consumers Bldg., Chicago.

Chicago

THE HEBE COMPANY

Seattle

at Los Angeles last year. One of them now has fine litter by Top Sensation 1st.

J. M. Roberts, formerly field man for the American Jersey Cattle Club and who served as superintendent of livestock at the recent state fair, has accepted an invitation to serve as superintendent of dairy cattle and dairy products at the Pacific International Livestock Show to be held at Portland next month.

Prices ruled very conservative at the dispersal sale of Shorthorns held at the Willota Ranch, Suisun, September 30, but were no doubt influenced by the lack of condition of the offering—the cattle selling directly from the range. The entire lot, including many young things, made a general average of \$130. The Pacheco Cattle Company, Hollister, was the heaviest buyer, taking 17 cows with calves at foot and 12 yearling heifers. Merritt-Bowers Company, Tulare, were the

strongest bull buyers and secured several lots that were distinct bargains. Other buyers were: J. W. Bauman, Suisun; J. B. Alameda, Suisun; J. M. Brazelton, Vacaville; W. L. Claton, Suisun; W. K. Ford, Ukiah; F. L. Gordon, Suisun; Thos. Harrison, Santa Rosa; A. Humburg, Danville; Y. M. Hardin, St. Helena; Claus Mangles, Suisun; Henry Oeste, Davis; A. B. Spreckels, Stock Farm, Napa; J. J. Summerfield, Santa Rosa; W. C. Whitman, Vacaville; T. F. Walsh, Vallejo and F. L. Gonsalves, Vacaville.

farm bureau at Petaluma, a Holstein calf, King Marco Elzevere, consigned by Jane Garden Farms, Sacramento, topped the offering at \$420. Two Jersey bulls from the herd of A. B. Purvine, Two Rock, sold for \$300 each. Sixteen head were sold.

Building operations have been started at Strayloch Farms, the breeding establishment of C. Harold Hopkins, near Davis. Manager J. I. Thompson expects to have the large cattle barn well under way before the fall rains set in. When the building plans are completed Strayloch Farms will be one of the show places of Northern California.

Chas. Gatewood, Fresno, reports the sale of ten Poland China sows and gilts, including Polandale Betty, first prize junior yearling sow, to C. B. McNeil, Fresno. Mr. McNeil is building one of the best herds in the state and this recent purchase has helped him very materially toward that end.

Maxwell & Penfield are ambitious breeders of high class Durocs at Lankershim. Their fine brood sow, Henrietta, by Grand Model, raised ten March pigs sired by Great Model. These and other foundation litters are strictly of herd building character.

Manager Chapman of Oakmere Ranch, San Diego, writes that Big Bess was made grand champion at the San Diego fair; that as the ideal Big Type Poland, backed by the best blood imported from the East, she has made a host of friends among the breeders.

COMING "WEED BULLETIN"

Copy for the bulletin, "Weeds of California," will go to press some time in November. This publication, which is the result of wide investigation and careful study, will include over 100 illustrations and much valuable information relating to the noxious weed pests of this state. It will be issued by the state department of agriculture.

Sulton Mayflower, the famous Shorthorn bull owned by the University of California, is dead and his death can be considered a distinct loss to the livestock interests of the West and the Shorthorn breed in particular. This bull was sired by Sultan Stamp, one of the best sons of the noted Whitehall Sultan, and his dam was the imported cow, Mayflower 16th. Individually, Sultan Mayflower was quite outstanding and reminded one of his famous grandsire. However it was his worth as a sire that brought him the greatest fame. With limited opportunity he sired many of the best Shorthorn productions of the West. He was the sire of California's Marvel, grand champion steer at the 1918 Pacific International Livestock Show and champion Shorthorn steer at the 1918 Chicago International. He was also the sire of California Model, the highest priced Shorthorn bull ever sold at auction on the Pacific Coast. California Majestic, another son, was the winning senior steer calf at the 1919 International. In many of the better herds of the state will be found daughters of this famous bull. The cause of his death is ascribed to a form of paralysis.

W. N. Carruthers, Live Oak, reports sale of the Shorthorn cow, May Blossom 12th, a daughter of Hallwood Villager and out of May Blossom 11th, to the Estate of Thomas Dibblee, Santa Barbara, for \$1,500.

TOYON FARM ASSOCIATION

WILL SELL AT PUBLIC AUCTION

150 Registered Holsteins 150

November 10-11, 1920

State Fair Grounds, Sacramento, Cal.

The herds of Toyon Farm Association, Los Altos and San Francisco, are to be consolidated into one big herd on their Brentwood Farm. The herds now total approximately 350 head, and for the present the owners plan to carry only about 200 head, hence the sale of 150 head at this time.

100 Milk Cows in This Sale

Their first individual offering will include approximately 100 head of cows and heifers in milk, of splendid type and breeding, many with large official records and out of high record dams. There will also be about 30 bred and open heifers, and about 20 bulls in the sale.

Females Bred to High Record Bulls

The females in this sale are bred to Sir Pietertje

Ormsby Mercedes 43d, son of Sir Pietertje Ormsby Mercedes and Aaggie Wayne Peep, whose yearly records for five years exceed the total of any other cow; Sir Aaggie Mead, son of Sir Aaggie De Kol Acme out of a 1200 lb. daughter of the 1142 lb. cow Aralia De Kol; a son of the 33 lb. cow Bonnie Lass Pauline; and a 30 lb. son of Johanna Bonheur Champion.

A Healthy Lot of Unblemished Cattle

In this entire offering there are only three cows with blemished udders; no female of breeding age will be offered unless she is believed to be safe in calf; every animal is positively guaranteed to be a breeder; every animal is tuberculin tested by a Federal Veterinarian and sold subject to retest by the buyer.

Kounias Registered Stock Farms
Modesto, California

Thursday, October 28, 1920

This offering will contain the highest record cows ever offered in a public sale in Stanislaus County, substantially bred, and practically all young.

There will also be a choice selection of bred and open heifers and heifer calves of good type and breeding.

The list of bulls affords selection of high quality and breeding for dairymen, and a few of registered herd heading caliber, including the herd sire KING KORNDYKE AAGGIE FAYNE, whose dam is a 33 lb. daughter of King Hengerveld Aaggie Fayne; a choice young son of the famous Hollywood Farm sire, JUDGE SEGIS, out of a 21 lb. daughter of Forward Prince Segis, her dam a 31 lb. daughter of Sir Skylark Ormsby Hengerveld that made 1127.27 lbs. butter in one year; and many others of excellent breeding.

Every animal positively guaranteed to be a breeder; every animal tuberculin tested and sold subject to retest by the buyer except as announced at sale.

SECOND PUBLIC SALE Caledonia Farms' Shorthorns

(AT THE FARMS)

West Sacramento, Cal.

Tuesday, November 16

60 Registered Shorthorns

NOTICE

The date announced last week, has been changed from Tuesday, October 26, to the above date.

50 Females—10 Bulls

In announcing the forthcoming sale of Caledonia Farms' Shorthorns it is felt that offering is in every way equal to former drafts, and in many respects it constitutes a better balanced lot than have ever left the herd. In inviting the cattle interests of the West to appraise this lot we do so with confidence. The mature cows, 30 in all with 15 calves at foot, represent desirable and proven Scotch and American bloodlines. Individually they are of high excellence. The calves selling at foot are all sired by one or another of our three great herd bulls and the females selling bred will carry the services of the same bulls.

20 Heifers

A real attraction of the sale will be the 20 young heifers that have been bred. These young females will fit into any man's herd and will prove excellent investments for years to come. The established breeder or the beginner should not overlook this opportunity to add such material to his herd.

10 Bulls

The ten bulls that we have catalogued range in age from 12 to 18 months. Several of them are splendid prospects for herd bulls and all are the sort that will work improvement in any range herd. They are well developed, heavy-boned, strong constitutioned bulls, of good colors. Several are Scotch.

In considering this sale bear in mind that there will be a wide opportunity to select the blood of our three famous herd bulls—

Selection of Tractor Implements

By C. A. Bacon

(The following article was prepared for the benefit of California power farmers, at the request of the California Tractor and Implement Association, to increase public knowledge of the practical points of power on the farm. Mr. Bacon is manager research and agricultural extension of the Oliver Chilled Plow Works.

HE purchaser of a tractor has but one object in mind—greater production. The only service that he can secure from his tractor is power. The tractor must pull. The implement that follows the tractor determines the production. Hence, the selection of implements to follow the tractor is very important because the efficiency or worth of the tractor is determined by the volume of production. Increased production can only result from better methods and better work. It is perfectly obvious that the tractor will receive the blame for decreased crop production due to use of implements not fitted to work with the tractor, or not good for the purpose.

Many farmers who have been in the habit of using horse drawn tools for years do not understand why they cannot use the tractor in place of horses for pulling their implements.

As far as the plow is concerned, there are two fundamental reasons why this cannot be done successfully. The first one is—the tractor produces much more unyielding power than horses. The second one is—the center of power on the tractor is at the rear while on the horses it is at the front, making a much longer distance between the center of weight and the center of power, requiring entirely different hitch connections. Of course, there is another reason, and that is the inconvenience of attempting to operate a horse drawn plow from the tractor. But from the standpoint of the quality of work the two first named reasons are vital.

A plow bottom to turn the earth successfully must be operated in its true line of draft. The attempt to operate a plow built for horses with the center of power in the neighborhood of nine feet ahead of where it would be on the tractor necessitates a wider range of vertical hitch adjustment than is ever put upon horse plows. The other reason is that plows for horses are built light. Whenever an obstruction is met the horses will yield and the plow will not be sub-

jected to the severe stress that it is subjected to when it strikes an obstruction with the tractor pulling it. Something must give. It is usually the plow, if it is a horse plow, because of its lighter construction.

Another important phase in the selection of a plow lies principally in the quality of work the plow does. While ease and convenience of operation are largely to be desired, a more important item is the quality of plowing because it depends upon the way the earth is plowed how the crops get their start. The better the start the greater the chances for larger yields. The additional strength of the tractor plow enables the operator to plow deep, which is very desirable in many places. Horse plows are not made to stand the continuous hard work occasioned by plowing nine and ten inches deep.

If farmers would only remember that the start of their crops depends more upon the plowing than any other single operation it would be a comparatively easy matter to select the implements that give the most efficient service. But in these days of competition when everybody is talking light draft, light weight tools, that will do any kind of work any time, under any condition, and making other equally foolish statements about the phenomenal things implements do, it is sometimes very difficult to make a selec-

tion. However, if everybody would first consider what is necessary for growing plants in their soils they would soon begin to study the fundamental parts of plows and other tillage implements necessary to put the ground in that condition. Most of us are inclined to look at the surface of the ground and if it looks well on top we think we have accomplished a great deal in the preparation of the seedbed, but the trouble always happens lower in the ground. We must constantly bear in mind that the condition which determines plant growth is beneath the surface of the ground, not on top. If the ground is poorly plowed no amount of after preparation can put it in proper shape to make it produce 100 per cent in any given season.

The work for which the tractor is to be used is one of the important things when selecting implements. Obviously, for orchard work the farmer would not select an outfit intended for use on a grain ranch, but yet, as far as the principle of plowing is concerned there should be absolutely no difference in the arrangement of the soil particles by the plow. When it comes to the question of convenience of operation among the trees, doing the least possible damage to the trees by the outfit, there is a necessity for an entirely different selection of levers and convenience of operation as far as the implement is concerned. Such implements can be secured.

The use of the disk harrow, roller pulverizer and spring tooth harrow with the tractor is worthy of special attention because of the saving in time and the volume of work these implements can do. A tractor disk harrow cutting ten feet will do the same volume of work as two five foot horse harrows and do the work much more efficiently because the operator from the tractor can handle the angling of the gangs and will leave no uncultivated strips either on the corners or through the field. He will experience no trouble with turning such as he must with improvised hitches necessary for a battery of horse tools. The same rules hold true with roller pulverizers.

In a general way the additional strength of all tractor built tools makes them last longer, cause less trouble for repairs, effecting a saving in both time and money. While specially designed tractor implements are more expensive to purchase at the start, yet the better quality of work they do has a very important bearing upon increased crop production. Keeping the outfit operating continuously at vital seasons of the year can mean the difference between a crop failure and a crop success.

BUTTE COUNTY FARM BUREAU TRIES OUT MARIOUT BARLEY

By H. E. Drobish

SEVENTEEN farm bureau Mariout barley demonstration plantings in Butte County gave an average increase in yield of seven sacks per acre over the production of common barley in the check fields. This new barley, developed at the university farm, proved superior to common barley in every respect in all demonstrations in Butte County. Not only did the fields of Mariout yield more sacks per acre but the barley weighed from six to 15 pounds more per sack. It ripened from two to three weeks earlier and was much better filled than the common barley.

This early maturing characteristic of Mariout barley not only causes the kernels to fill better but enables the farmer on irrigated land to get his soil in shape for the fall crop a little earlier. One farmer said that this feature alone, if there was no increase in yield, would cause him to plant Mariout barley.

Mariout barley came originally from the desert regions of Africa. It was introduced because it seemed to be especially valuable for poorer soils in a region of light rainfall. The Mariout barley has a much shorter straw than common barley but the heads are heavy and the kernels grow very compact in the head. It is not as good as the common for a hay crop.

This barley is adapted to the lighter types of soil. In Butte County this year excellent results were secured on the heavy adobe soils. Such results

International 8-16 Kerosene Tractor

The Adaptable Farm Power

On sun-baked slopes, in rain-soaked valleys, and on mellow uplands you will find dependable International 8-16 Kerosene Tractors working efficiently, converting cheap kerosene into valuable farm power.

Plowing, disking, seeding, cultivating orchards, hauling on road and farm, pulling stumps, dragging roads, drawing mowers, hay loaders, grain harvesting machines; threshing grain, baling hay, cutting ensilage, sawing wood—on all these jobs and many more you will find tireless International 8-16 kerosene power rendering satisfactory year-round service.

The International 8-16 is adaptable to all forms of farm work. Its snug compactness, light weight, easy control, ample power, three speeds forward and general fitness for diversified service make it highly popular with farmers in all branches of agriculture. It has a place on practically every farm.

Fifteen years of tractor-building experience and over three-quarters of a century of general farm machine success, backed by a broad-as-agriculture reputation for fair dealing, quality and service—these factors are your assurance of SATISFACTION when you buy an INTERNATIONAL 8-16 KEROSENE TRACTOR. Talk with your nearby International dealer.

Bought, Sold and Rented

BUTRESS & McCLELLAN
205 Los Angeles St., Los Angeles

should not be expected, however, in the ordinary wet years when seeding is done prior to January 1. On heavy soil where early planting is desired Tennessee Winter barley should be used.

This year's planting in this county was merely an experiment, but the increase in yield of Mariout only in the fields where checks of common were planted, figured at \$2.50 per hundred weight, resulted in a profit of \$6,366.40. If all the Mariout barley harvested in Butte County in the farm bureau demonstrations is sold at \$6 per hundred weight, which is the present price in the state, the return over and above the return which would have been secured by planting common barley would amount to \$36,755.88. To say the least, this little farm bureau experiment has paid well, but the real value of the demonstration will be realized in the years to come.

The following is list of those who grew Mariout barley alongside common barley as a farm bureau demonstration, giving yield per acre in sacks of each:

D. L. Smith, Gridley, 34 sacks Mariout, 19 common; C. Cliffman, Gridley, 32 sacks Mariout, 22 common; T. Peterson, Chico, 13 sacks Mariout, five common; W. Green, Biggs, 30 sacks Mariout, 20 common; G. Canfield, Chico, 30 sacks Mariout, 20 common; C. Somes, Chico, 25 sacks Mariout, 16 common; B. Phillips, Chico, 33½ sacks Mariout, 11½ common; John Guill, Jr., Chico, 23 sacks Mariout, 10 common; J. P. Samuelson, Durham, 29 sacks Mariout, 14 common; F. E. Baxter, Durham, 33.09 sacks Mariout, 30.3 common; H. Nelson, Chico, 17.6 sacks Mariout, 16 common; S. Mealey, Gridley, 25 sacks Mariout, 23 common; Dodge Land Co., Chico, 27½ sacks Mariout, 15 common; A. Andrews, Oroville, seven sacks Mariout, four common; W. D'Egilbert, Nelson, 15 sacks Mariout, common fit only for hay; Ray Reedy, Chico, 17½ sacks Mariout, 10¾ common; W. F. Doty, Biggs, 18 sacks Mariout, 14½ common.

DURHAM FARM PRIZES AWARDED

In the belief that it would promote better farming and increase the interest of the farmers and farm laborers at Durham some of the members of the land settlement board and friends of the settlement who live at Durham offered the following prizes to be competed for in the season of 1920:

First prize, for best planned and cultivated farm, registered Romney Marsh sheep, given by Mortimer Fleishacker; second prize, for best dairy herd, pure bred cow or heifer, given by E. S. Wangenheim; third prize, for best cultivated ditch bank, pure bred Duroc-Jersey gilt, given by S. T. Mason; fourth prize, for best arranged and best cultivated garden on farm laborer's allotment, collection of garden seeds, given by T. C. Mitchell; fifth prize, for second best garden on farm laborer's allotment, pen of pure bred fowls, given by Elwood Mead.

The inspection of the farms and gardens of the settlement took place in September 22. The judges were: R. L. Beagles, superintendent plant introduction garden at Chico; L. C. Shirley, vice-president Butte County farm bureau; George Jones, farmer and fruit raiser of Butte County. George C. Kreutzer, superintendent of the Durham colony, acted as secretary. The following settlers were awarded prizes and honorable mention:

First, best cultivated farm—Frank E. Baxter, first prize; honorable mention, E. O. Messenger, Carl Nielsen, Bernice Bahmeier.

Second, best dairy farm—Thomas C. Christensen, first prize; honorable mention, Carl C. Nielsen, George E. Pearl, John Daly.

Third, best cultivated ditch bank—Carl Nielsen, first prize.

Fourth, best garden, two acres—O. N. Bigcraft, first prize; E. M. Willhoite, second prize; honorable mention, D. C. Crandall, Campbell Schooling, T. F. Megenity.

The judges expressed the belief that many of the farms inspected were worthy of prizes. They felt that the results obtained in the two years that settlers have been at Durham were remarkable and that in this time of social and industrial unrest, settlements like Durham are a source of inestimable political strength to the state.

Cultivate More Acres—Produce Bigger Crops—

Easy going on a track,
The Cletrac way.

The Cletrac will do it for you. It will speed up your plowing and discing—working 24 hours a day if necessary, 7 days a week. The Cletrac is the all-purpose tractor—adapted to all conditions. Used alone or in "fleets", it is the right size and type for almost any ranch.

Laying its own endless track, the Cletrac travels over the ground with a light, sure foot and a steady, powerful pull. The Cletrac is economical, too. Operates perfectly on kerosene, distillate or "gas".

Soft or sticky soil does not interfere with the Cletrac's performance. The endless track takes care of that. No danger from the Cletrac sinking in or packing the soil. The Cletrac does not miss the corners either. Turns short, swings back to the furrow quickly without loss of time or power.

Don't wait until the rush hits you—be ready for it. Buy your Cletrac at once and get prompt delivery.

Write for that interesting booklet, "Selecting Your Tractor"—it's free.

WEBSTER, WEBSTER & BLEWETT, Savings and Loan Bldg., Stockton, California. Established 50 years. Send for free book on patents.

FOREST CARE MEANS GROWTH
OF AMERICAN IDEAS

By Charles H. Shinn

At this time of the year when millions of people are taking trips to see friends, are traveling over the national forests and renewing their health and energy, some will be where they can do a little first-hand study of one or two of the problems of continued human existence on this planet.

We once asked one of the greatest of American thinkers: "What does the world most need?" Came the instant response: "Better brain power!" By that he meant, of course, more education of the right sort, higher average ability to do straight thinking, and broader fellowship everywhere.

It was a California newspaper man on his vacation this very month who complained in almost the same breath of the high cost of gasoline for his car, the high price of paper and books and the cattle that were grazing near to where he was camped. To all this a mountaineer replied: "Look deeper, please, and see the immensity of the whole great group of problems before our forest workers."

"Show me," the newspaper man responded.

"Let us begin with forest fires. If absolutely prevented—the end which foresters desire—none of the so-called 'forest waste' will be destroyed. Modern science, as so finely shown in the industrial research work at the ten year old forest laboratory, Madison, Wisconsin, is showing us how to utilize every cubic inch of it. You should visit that place and read an article about it in the July-issue of 'American Forestry.'

"As grazing improves on the national forests by reason of fuller co-operation between the owners of livestock and the government it is possible that large areas of moist meadows will be covered with paper producing woods, such as poplars. The sawdust piles and waste around old millsites will be utilized for paste-board and packing papers.

"Lastly, consider what men will do when all the oil and coal is exhausted. For one thing we shall make alcohol out of wood waste and sawdust to such a vast total that every forest floor will be swept clean. Long before that our private and our public foresters will be working together in perfect harmony."

"Write that down," the newspaper man told the mountaineer—and here it is!

FABRICS NAMED FOR CITIES

The origin of the names of popular fabrics is even more interesting than the tracing to third lingual roots of ordinary words. About the year 1329 the woolen trade of England became located at Worsted, about 15 miles from Norwich, and it was at this place that the manufacture of the twisted double thread woolen, afterwards called worsted, was first made. If not invented. Linsey-wolsey was first made at Linsey, and was for a long time a very popular fabric. Kerseymer takes its name from the village of Kersey and the mere close by it, in the County of Suffolk.

We have to thank Gaza in Palestine, the gates of which Samson carried away, for gaze or gauze. Gaza means "treasure." Voltaire, wishing to describe some intellectual but dressy woman, said, "She is an eagle in a cage of gauze."

Muslin owes its name to Mossoul, a fortified town in Turkey in Asia.

Tulle obtains its name from that of a city in the south of France. Travelers by rail in Brittany often glide past Guingamp without remembering that it was here that was first produced that useful fabric gingham.

Damask derives its name from the city of Damascus; calico from Calcut, a town in India formerly celebrated for its cotton cloth, where also calico was printed; cambric from Cambray, a town in Flanders, and tweed from the fabric worn by fishermen upon the River Tweed.

THE ATMOSPHERE OF ARGUMENT

"How's your singing society getting on?"

"Fine," answered Jud Tunkins. "The music hasn't come along very strong yet, but the debating is something extraordinary."

Household Department

HIS PARENT'S OPINION

He's never been to college and has little use for books.

Except the ones with lots of pictures in. He's not a fluent talker, though you'd think it from his looks.

But pretty soon we think that he'll begin.

We don't know how he learned so much, you'd be surprised to see

What marvelous intelligence he shows; It's just a source of never-falling wonder, sir, to me

The heaps of things our little baby knows.

Some children are accomplished; they can do a lot of things.

And do a number of them fairly well. One dances to perfection and another plays or sings.

Or in some other manner may excel. But not at two years often; they're comparatively old.

Our little skeezlecks now is barely two; You hardly would believe me, I imagine, if I told

You half the things our little one can do.

I've heard of other babies that their parents brag about;

They're prodigies, you'd naturally think.

The fond and foolish fathers quite believe it all, no doubt.

But I just smile and turn my head and wink.

I'm not disposed to blame them for their foolishness a bit;

They've got to make the most of what they've got.

But if you saw our youngster you would cheerfully admit

The cunning little rascal beats the lot.

DRESSMAKING

(Concluded.)

"O dad, need you ask? I'm so sick of this little old town that I can hardly stand it to walk to the postoffice. I know every teacher, every boy and girl, every possibility of school. I race through my books ahead of the rest and then have to go over the thing again with the class. And you don't have to be told that the school, like the town, is not what we'd like it to be."

"No," Mr. Prior admitted, "I don't have to be told that. I've made the mistake of sticking to the town till I can't leave, but I want my children to get out and make something of themselves."

He had found the paper he was looking for, and he held it out of Leila.

"There's a check for a hundred and fifty dollars," he said. "It came to me yesterday—as commission for selling Mrs. Lyon's house. Now, you can have it if you'll make it do the work of three hundred."

"O dad, thank you—and no thank you! How could I do it?"

"How could you make it reach? By using your brains. Your aunt has done her share, and now I'll do mine. The rest is up to you."

Leila's eyes questioned her mother, and read there that she was to accept.

"Very well," she said, flushing. "I'll do it, dad, somehow."

But her voice faltered. She knew why her mother, who was staring at a magazine, failed to turn the pages. She, like Leila herself, was absorbed with the thought of that outfit.

Two days later Miss Mina Lee appeared with her four pairs of scissors, her three cornered pincushion and her emery bag, and the village knew that the Priors were in earnest about sending Leila away. When the most self-effacing and industrious sewing woman in the county settled down in a house, it meant there was something being done. She was a friend of the Priors as well as their handy helper, and so she took it as a matter of course that she should be told the whole story of their difficulties.

"We've got to do it!" she declared. "Only think of Leila's going to St. Mary's! I once hoped to go there myself. That was before father died." She spread out her fashion books hastily, as if to apologize for having brought her affairs into the conversation. "Mrs. Prior, shall we shop by mail, and so save the expense of going to the city?"

So they studied fashions, estimated amounts of material, put down the requirements so far as possible and began work.

"I shan't need the riding costume," said Leila, "because I can't afford a horse, and my present school dress will do for tennis and skating. I'd like a silk gymnasium suit, but I suppose I'd better do with sateen."

"Your blue silk will serve for one

dinner dress," Mrs. Prior declared, "and I really think your old pongee could be cleaned and trimmed with coral colored satin and be made to do for another. Then you'll have to have one new one."

"A black taffeta, perhaps, with turquoise blue velvet on the bodice," suggested Miss Lee.

"If only my old coat were good enough!" said Leila with a sigh.

But they unanimously decided that it was not. The coat and the street suit they would buy ready made. Leila, who had talent for millinery, made the hats herself.

Of course Miss Lee's needle was not the only one that was busy. Leila and her mother sewed in every available moment, and soon forgot their scrupulous ideals about dusting. The meals became rather slapdash. Mr. Prior heard no talk except of the desired width of collars, the fashionable flare of skirts and the styles of sleeves, until he fled—even after supper—to his office. Miss Lee ceased to go home at night, but, like an anxious physician, "stayed on the case," sewing evenings and rising early in the morning to take some extra stitches, as she put it. Mrs. Prior began to look worn. There were circles under her eyes and her hands trembled. Once she put in a plea for moderation.

Can't we send some of your things on to you later, Leila?" she inquired. "Then Mina and I could finish them at our leisure."

But both Mina and Leila rejected the suggestion. They were feverish with their dressmaking orgy, and nothing could stay them.

"It will be so nice for Leila to be able to take everything out of her trunks in perfect condition!" said the enthusiastic dressmaker.

"Oh, let's finish everything up," Leila said.

The neighbors were forever dropping in to see how things were getting on, and their calls became more and more irritating to the three flushed and eager women. Hospitality at the Prior house languished as never before. It seemed the last straw when several of Leila's friends insisted on giving farewell parties. There was nothing she wanted so much as to be left to her tasks; but she could not reject the kindness of her friends. But it seemed to be the clothes of her friends rather than their faces that interested Leila at the parties. She had become possessed with the idea of fashions, and all of her usual sympathy, tenderness and geniality were swept into the background.

"The girl seems to be off her head about clothes," Mr. Prior complained to his wife. "Hasn't she another idea in her head? It seems to me education is going to be wasted on her."

"Oh, you don't think that really, Thomas," said her mother. "We've set a hard task for her—too hard, perhaps. Be patient; she'll come to herself presently."

"I don't understand women. Who'd think my little Leila would lose her head over clothes?"

Mrs. Prior could not deny that Leila had done so. Even in the tremulous hour of farewell, when for the first time the girl was leaving her home, she seemed occupied with the snaps on her gloves and the angle of her hat.

As Leila stood on the rear platform of the train, waving her farewells to her parents and her friends, she herself felt that something was wrong. It seemed to her that memories and regrets, loves and associations, were knocking at the door of her spirit and that she was refusing them entrance. All the room in her heart seemed occupied by other things—by little vanities and worries, details and fears. What if, after all, the tunic of her black taffeta were too long? What if they were not wearing girdles? Mina had such a liking for girdles that she had put them on everything.

There, the train has turned the bend. She had caught her last glimpse of all the people she knew best. Well, she must go in and ask for a paper bag for her hat, and she must remember not to rumple her Georgette crape collar against the chair back.

As she sought her seat she caught a glimpse of herself in a mirror and thought what a dark, fussy, fretful little thing she was. She wished she

When Writing Advertisers Mention California Cultivator

could look like her mother—only not so tired. But there were those forbidden thoughts knocking again! How would her mother spend the rest of the day? Lying down, resting at last in the dear little sitting room that had been allowed to fall into such sad neglect? Oh, why had she not made everything beautiful before she came away—put flowers in the vases, and left all the silver shining, and all the closets and shelves in order? Such a little treasure of a home as it was! And such parents as it held! And such friends as came knocking at its door—or, not even waiting to knock, came walking in, sure of a welcome, until that last fatal, feverish, curiously month when everything in the world had seemed blotted out except clothes.

"I'm a stupid, selfish, horrid pig!" said Leila to herself.

She had a ride of only four hours, and the last of it was enlivened by the young girls who got on the train, and who, Leila felt convinced, had the same destination as herself. But she was too shy to ask them, especially as most of them were with their parents. Watching them silently, she noticed their manners, their faces and their clothes—always their clothes. Several of them wore suits that Leila knew were quite out of date. But the wearers seemed unaware of that fact; they were very merry and rather noisy when at last the train reached Fairfield. A group of teachers and girls were on the platform, and all the passengers on the train craned their necks to watch the joyous greetings.

"This must be Leila Prior," said a pleasant voice. "I'm Mary Greer, and I was delegated to meet you. I know your aunt, Mrs. Whittaker Browne; she's my next door neighbor in the city, you know."

"Oh, I've heard of you," said Leila with awe.

This girl had indeed been long held up to Leila as a model. But Mary Greer failed to comport herself as Leila had feared she would. She was cordial and jolly, and Leila noticed, at first almost with shocked surprise, and then with relief, that she was wearing simple, unassuming clothes—a gray and green striped skirt and a soft green sweater. Somehow those clothes looked as natural as grass or leaves. Leila suddenly felt stiff and self-conscious. Was it possible that she could be too grand in her home-made things?

Mary Greer was introducing Leila to some of the girls round her and to some of the teachers, who gave her a hearty welcome. The scene and the occasion were quite as she had pictured them, yet she could not enjoy them as she should. Her heart leaped at sight of the beautiful campus and the mellow, old, rose hued buildings, but it sank again. She felt that she could not meet the occasion. She wanted to lie down in some quiet place and cry.

"Were you at all car sick?" asked Mary Greer sympathetically. "You're looking rather pale, aren't you? Or do you belong that way?"

Leila had to smile. "No, I don't," she said. "I'm dark and weird, but I have red cheeks when I'm feeling all right. I can't tell why it is, but I'm awfully tired—not fit to get up those steps, really."

Mary Greer put a vigorous, tennis hardened arm about Leila's waist.

"Here we go," she said commandingly. "Make a sprint of it. I'll take you to your room. It's next to mine. Formalities can wait till a more propitious hour."

Once in the quaint little room that had been her aunt's, and that she had dreamed of as the veritable antechamber to innumerable girlish delights, Leila broke down and sobbed. Mary Greer closed the door and locked it. She wisely let Leila's tears have their way for a moment or two. Then she asked:

"Is it breaking home ties?"

"I don't think so," faltered Leila, very much ashamed of herself and struggling to regain her calm. "I guess it's clothes."

"Oh, I know all about that," announced the senior. "Dressmaking's the serpent in the grass, the enemy in ambush. Wasn't I a victim of it myself as a freshman? The poor little freshies come here fagged to the verge of prostration. All nonsense. Could get along with half of what they have. Oh, yes, I know about the requirements, but take them with a grain

of salt. Wear your old clothes; borrow your sister's; tell the dressmaker to send them on later; but don't come into school with your nerves full of sand burs."

"O dear," said Leila with a sigh, "and I thought it was my duty! I got my things for half what I at first thought I should have to spend, but I've almost killed my precious mother, I suspect; and my little dressmaker, looked as if she'd had typhoid."

"Too bad! But here come your trunks. Shall I help you unpack?"

"Oh, would you? I feel as if I couldn't hang up a dress to save my life."

Mary Greer worked swiftly and efficiently.

"We don't go in for the extremes of fashion here," she remarked. "We look nice, I hope. We're not duddy. But, dear me, we can't be bothered with fuss and feathers. We've decided to make it bad form."

But as she lifted Leila's pretty, appropriate garments from the trunk, she had to pay them tribute.

"You're a perfect wonder to have superintended all that," she said. "I can see you're going to do what you set out to—if your strength holds out. But I've a bit of advice for you, if you feel you want it."

"Oh, I want it, please."

"If you must lose your head, don't do it over dressmaking," Mary Greer laughed lightly and held out her two hands to Leila with a gesture and smile that robbed the words of all offense. "Do you know, when I get married—as I suppose I shall sometime—I mean to do it suddenly, so that there'll be no chance for dressmaking. At least, none to speak of."

"But you have to have clothes!"

"Well, not so very many," said the other. "A few of the right kind will serve. But come, we must go. We'll stop in my room while I slip into a dinner frock."

Arm in arm, a few minutes later they descended to the refectory. Full of high spirits, girls by the twenties swarmed in with them.

"We part here," said Mary Greer with a smile, and gave Leila a friendly little push toward the freshman table.

The long tables, with their snowy cloths, bore asters in many hues. The hanging lamps gave a soft golden light, and beneath it the faces of the girls glowed with added loveliness. Leila found her place card and, following the example of the others, stood behind her chair. From her place at the end of the room beneath the great stained window the dean offered her "grace before meat."

"We thank Thee, Bestower of all blessings, for the food that is spread upon these tables, and pray that as we enjoy it we may partake of more enduring bread—the bread of friendship, which hath a sweet savor. May good will be as the cup of cold water with which we refresh ourselves, and gratitude for opportunity as the wholesome meat that strengthens us. Keep us ever conscious of our need for the sustenance of the spirit as well as of the body, and give us zest for our quest of learning. Amen."

Leila looked at the gracious face of the woman who had spoken, and by a chance met fairly her clear gaze. The dean smiled, and gratefully Leila smiled in answer.

Then the dean seated herself, and the girls followed her example. Leila saw the young, eager faces, noticed the stately room, felt about her an indefinable and beautiful atmosphere of courtesy, of hope, of youth and delight. Some one spoke to her, and she turned, half timidly, yet with pleasure, to reply. It was not until she was back in her own room two hours later that she remembered that she had not noticed a single dress worn at that memorable dinner.

"The spell is broken," she said to herself, and laughed. "I'll take Mary Greer's advice. The next time I lose my head it will not be over dressmaking."

If a lamp has been filled to overflowing a medicine dropper is an excellent thing for removing the superfluous oil tidily.

HINTS FROM HOUSEKEEPERS

Beef Tallow for Shortening

Sometime ago a subscriber was inquiring for a recipe for using beef tallow for shortening purposes. I have used the following and find it very good:

Try out three pounds tallow and strain and while hot pour into it one (about) quart cottonseed salad oil. Stir until cool and you will have a fat good for all cooking purposes.—Mrs. Geo. C. Nevins, Hemet.

Grape Syrup

Just read your question in Cultivator about a satisfactory way of making grape syrup. I have made some for the last two years and we found it very good.

I put the grapes to boil without water, mashing them just enough to get some juice so they will not burn. After they are done I drain off the juice, bring it to boil again and add to each gallon of juice one tablespoon precipitated chalk. (Caution has to be taken in stirring in the chalk, since the juice rises the same as if you put in soda.) Let stand over night. In the morning strain the juice through a cloth without disturbing the chalk which has settled to the bottom of dish. Boil the juice down to a syrup. I have never used Muscats, but I have used Malagas and also Emperors. I hope this may be a help to some of your readers.—Mrs. H. A. Bachmann, Woodlake.

Homemade Syrup—Cucumber Catsup

Cane syrup:

Here is a syrup made from home grown cane, also from an old issue of the Cultivator:

Cut the stalks into small pieces to handle easily. Then peel all the outside away from the pith and put the pith through the meat chopper, first with a moderate knife, then second and third times with the finest knife. There is always quite a quantity of juice comes out at the back of the grinder, so to catch it all put a cup on a chair or box beneath; save this cup of juice by itself. Now cover the ground pith with water and boil until the sweetness is all in the water and the pith tastes like sawdust. Strain into another kettle and boil until the water seems all boiled out. Add the cup of pure juice (that was caught) and boil together till it is the consistency wanted and it will be pure white syrup with no bitter or strong taste. Do not make it as thick as molasses, the longer you boil it the thicker it gets and the stronger it tastes.

This was from A. E. W., Redondo.

* * *

Sugar Beet Syrup (home method):

Cut tops off beets, clean by soaking a few minutes and scouring with coarse stiff brush. Cut beets into slices as thin as one-sixteenth of an inch if possible. A butcher knife may be used, but a cole slaw cutter or some other slicing device is more convenient. The sliced beets are placed in a tight barrel and just enough hot water to cover them, boiling if possible, is poured in at once. The barrel is then covered with several thicknesses of canvas to hold the heat. The sliced beets are allowed to soak for about an hour. The barrel is agitated from time to time without being uncovered to bring out the sugar from the beets. The liquid is then drawn off, strained through several thicknesses of cheese cloth and placed in a kettle in which it is boiled slowly until it has evaporated to the thickness desired. It is important that the boiling be slow and the process take several hours. The work may be done outdoors if desired. Be careful not to scorch the syrup. The scum which rises to the surface of the liquid is skimmed off to remove the strong beet flavor. The syrup is bottled or canned while hot and sealed to prevent molding. It is dark in color but has a pleasant flavor.

* * *

Cucumber Catsup: Peel very thin six large fresh cucumbers, chop fine, add scant tablespoon salt and let them drain in colander an hour. Add two small or one large onion chopped fine, one teaspoon white pepper and one pint vinegar. Stir ingredients together well and seal in jars.

Let this stand at least a month before using. This catsup keeps for years. It is made without cooking and retains so perfectly the taste of fresh cucumbers that anyone fond of cucum-

bers likes it.—Mrs. H. R. De Hoff, Oxnard.

Grape Syrup

I think this is the recipe for which "Subscriber Fallbrook" asks in the Cultivator of September 25. It was published in the Cultivator of March 8, 1919:

"The following simple method for making syrup from grapes is much used in Southern Italy and can be employed in California just as well," says the Placer County Farm Bureau Weekly.

"This syrup can be made in any kitchen and is suitable to be used with hot cakes, cooking and other purposes for which corn syrups are used. It is much superior to most of the syrups on the market.

"The grapes are stemmed, crushed and heated nearly to the boiling point for a few minutes. The juice is then strained off through a muslin bag in the usual way and placed in a wide shallow pan on the stove. Eggshells are put in with the juice to neutralize certain of the acids—say about a dozen eggshells to the gallon of juice. Or prepared chalk (from the drug store) may be used instead of the shells—about one and a half to two ounces to the gallon.

"The juice is then kept boiling slowly until it thickens to a syrup of the desired consistency. It is then again strained through a bag and kept in jars."

We tried this last year, and it was much liked as a table syrup, but it was not tried for cooking purposes.

In putting the juice through muslin bag so much seemed to be wasted that would not go through the meshes of the cloth that we took only the seed out, then boiled the rest down, and it kept well, sealed in the usual way in Mason pint jars. If we used anything to neutralize the acid it was eggshells, but I cannot remember surely.—Mrs. J. F. Delzell, Lindsay.

HOUSEHOLD QUERIES

Dill in Pickles

How large should dill be to be used for dill pickles? Mine is about five inches high but I fear it is too small yet. I have never made any dill pickles but am anxious to learn. Can or should the dill be transplanted now? It came up rather thickly. I am afraid my cucumbers will be gone before the dill is ready as some of the vines seem to be dying now.—Subscriber, Oxnard.

The usual practice in making dill pickles is to use the entire umbel after it has blossomed or is in seed. The stems are broken off just below the blossom cluster and laid in the pickle jar with the cucumbers. The young plants have the same flavor so possibly it would be satisfactory to use these young plants now if inquirer has plenty of them. Of course, it would be necessary to use much more of the young green leaves than of the more aromatic seeds or blossoms. These plants, however, should mature yet this season so may be of use for later cucumbers. They are too high to transplant now; that should be done when they are two or three inches high.

Our inquirer does not ask for directions for making the pickles but in case she does wish recipe, here is one:

Use earthen or wooden crock. Use freshly picked cucumbers. Don't rub off spines in washing them. Place layer of dill plant over bottom of vessel and if liked a small quantity of mixed dill pickle spices which may be purchased at most groceries. On this place two or three layers of small cucumbers, another layer of dill plant and spices, repeating layers until container is almost full. Cover with layer of beet leaves or grape leaves at least an inch thick. Fill and cover with brine made of one pound of salt, 10 quarts of water and two-thirds quart vinegar. Allow to stand until fermentation ceases (3 to 4 weeks). Seal with paraffin. The pickles may be kept indefinitely by heating to boiling in brine in which they are made and sealing boiling hot in glass jars.

The way they are fixing up dairy barns these days, a feller would almost rather be a cow than a boarder at a cheap hotel.—Hoard's Dairyman.

Always Attractive and Comfortable

YOU will find in Martha Washington shoes that rare combination of style, beauty and comfort which delights every woman.

You can always be sure that your Martha Washingtons add the desired touch of graceful style which completes an attractive costume.

Equally sure, also, that your feet will never suffer. For Martha Washington shoes are built for comfort and wear as well as for appearance.

Martha Washington shoes are made in all the newest styles and shapes. But be sure and look for the Martha Washington name and the Mayer trade mark on every shoe for there are many imitations of these famous shoes.

If your dealer doesn't handle Martha Washington shoes write us.

White, 2.02½.

Gyp.: 2.80.

Bran: Kansas, 38.00-50.00.

HAY

Alfalfa Growers of California, October 6: The tremendous decline, still continuing, of corn, barley, oats, wheat, etc., has brought about an easier feeling. The alfalfa market shows sympathy with these other markets, though logically this should not be the case as there is no overproduction on supplies of alfalfa in the state, on the contrary there is a shortage which is bound to make itself felt abruptly between now and next spring. Neither can the cause of the easy feeling be laid to heavy stocks in the hands of dealers and consumers; on the contrary these stocks are very much lighter than usual at this time of the year. The market at present is not regulated very much by supply and demand, but principally by the condition of the money market; this is at the bottom of the phenomenal breaks in the prices of grain, cotton, wool, cattle, etc. Present prices of alfalfa hay are lower now than they should be and will discourage production, if they continue. The impression of the general public seems to be that prices of alfalfa are high, but they only see the prices quoted for fancy quality, while the great bulk of the production consists of ordinary hay which at about \$24, Los Angeles means a loss to the producer. Prices could be easily restored to the legitimate level and kept there, if the Association were strong enough to adjust the distribution to the current demand, but the unorganized marketing by outside growers in fits and starts under the present conditions only "from hand to mouth buying," makes the market so sensitive that it is easily thrown out of balance. What is there fore needed now more than ever is a stronger Association, that is more members and acreage, and this can very easily be accomplished if the present members will do their part by bringing in their neighbors who are still on the outside. There were 600 tons of hay of all kinds received on the Los Angeles tracks the week ending October 2, and 250 tons held over as against 1000 tons the week before.

POULTRY

Wholesale prices are:

Prices in this market remained unchanged Monday from those of Saturday. There was but light demand in all lines and heavy arrivals expected. According to merchants on Front Street there is every prospect of a break in prices shortly. Quotations:

Broilers, 15 pounds per dozen, 50.

Colored fryers—2 to 3 lbs., 38@40.

Colored young roosters (smooth), 3 to 4 lbs., 40; staggy, 25@27.

Old roosters (colored), 20@23; market firm.

Leghorn hens, 3 lbs. and over, 25@30.

Large colored hens, 38@40.

Young Pekin ducks, 25; old ducks, 23@25; young geese, 25; market easy.

Live Belgian hare, 20@22; dressed, 25@30; market firm.

Dressed Turkeys—Young, large, .60; market firm; fancy, 50@53; live turkeys, young, 45@50; old, 45@50.

Squabs—Large, 55@60 per lb., market firm.

Pigeons—3.00@4.00 per dozen; market firm.

LIVESTOCK

Western Meat Company prices are:

Cattle: Grass steers, No. 1, weighing 1000 to 1200 lbs., 9@9½; do, 1200 to 1400 lbs., 8½@9; do, second quality, 7@7½; thin, 5½@6.

Cows and heifers: No. 1, 7½@8; second quality, 6@7; common to thin, 3@4.

Calves: Light weight, 10@11; medium, 8@9; heavy, 7@8.

Lambs: Milk, 9@10; yearlings, 7½@8.

Sheep: Wethers, 7@7½; ewes, 5½@6.

Hogs: Weighing 100 to 150 lbs., 15½@16; 225 to 300 lbs., 16; 300 to 400 lbs., 15.

Figs: Fancy black, 25-lb. bxs, 12c lb.; choice black, 25-lb. bxs, 9c lb.; extra choice, 25-lb. bxs, 11c lb.; choice whites, 25-lb. bxs, 12c lb.; fancy whites, 25-lb. bxs, 18c lb.; whites, 70-4 oz. 8.75 box; whites, 50-6 oz., 3.50 box; 10-4 layer, fancy whites, 2.25 box.

Prunes: 30-40 prunes, 25-lb. bxs, 23c;

40-50, 25-lb. bxs, 21c; 50-60, 25-lb. bxs, 19c lb.; 60-70, 25-lb. bxs, 16c; 70-80, 25-lb. bxs, 12½c

BEET GROWERS WOULD HAVE SUGAR MILLS

Keen interest is being evidenced by sugar beet growers in various sections of the country in the possibility of producing their own sugar on the farm by some simple process or of establishing and operating their own sugar mills. Owing to the scarcity and high price of sugar numerous inquiries on the subject are being received by the U. S. bureau of plant industry.

According to specialists of the bureau who have made a close study of all phases of beet sugar production, there are several fundamental features to be taken into consideration in the establishment and operation of sugar mills. In the first place no simple or inexpensive method of making sugar from beets on a home or small scale has been devised. Therefore a fully equipped sugar mill is necessary in producing sugar from beets. The smallest beet sugar mill to be successful should slice not less than 500 tons of beets a day for a period of 100 days each year. Since the average yield of beets in the United States is ten tons per acre, not less than 5,000 acres of beets must be grown annually for each mill of this size. A smaller acreage would probably cause the mill to operate at a loss under normal conditions. There is almost always a larger or smaller loss of beet acreage during the season in every community where beets are grown, hence in order to bring 5,000 acres of beets to maturity it would be wise to plant about 5,500 acres. In order to insure the production of from 5,000 to 6,000 acres of beets annually in a given beet area there should be available in that area at least from 15 to 20 thousand acres of good beet land, so that proper crop rotation can be practiced. This acreage should be so located that from 25 to 50 per cent of the beets grown can be delivered at the sugar mill by wagons, and the remainder of the beets should have a freight haul of less than 100 miles, in order to avoid heavy freight charges.

The construction and equipment of a mill of 500 tons slicing capacity would cost under present conditions approximately \$750,000. This is about 50 per cent above pre-war costs owing to the increased price of materials and the higher scale of wages. In addition to the initial cost of the mill approximately \$500,000 of working capital would be required in cash for overhead charges and operating expenses until returns can be expected from the sale of sugar.

Probably the most important of the other items to be taken into account in the operation of a beet sugar mill is that of a supply of sugar beet seed. A 500 ton mill would require about 100,000 pounds of seed annually to insure the production of sufficient beets for a 100 day run. Sugar beet seed of good quality has been produced in the United States each year for several years, and those who are considering the erection of beet sugar mills should look into the possibilities of producing their own seed. This minimum sized mill would require in addition to its permanent employees about 300 workmen for the operating period and a good supply of pure water, high grade lime rock, and plenty of coal for fuel, besides numerous other supplies.

SUDAN GRASS

The U. S. department of agriculture has made investigations as to Sudan grass and finds that it is proving a remarkably economical means of producing large quantities of very good hay. It has issued Farmer's Bulletin 1126, 32 pages filled with text and illustrations. The book is summarized:

Sudan grass was obtained in 1909 from the Sudan government at Khartoum as the result of a systematic search for a form of Johnson grass without root stocks. No other plant importation ever gained such immediate and widespread popularity in the United States.

Sudan grass is strictly an annual without underground root stocks. It grows to a height of three to five feet in drilled seedings and five to eight feet in cultivated rows. Drilled seedings are generally preferred for hay and the cultivated rows for seed production.

Sudan grass requires a warm climate for its best development and is of most value as an emergency hay

crop, being superior to millet for this purpose in all except the northern third of the United States.

In irrigated sections of the Southwest Sudan grass yields practically as much hay as alfalfa and is very useful in providing a variety of roughage for dairy cows.

The best time to cut Sudan grass for hay is when it is in full head, but the grass can be harvested somewhat earlier or later than this with no material loss in feeding value.

Sudan grass is a good soiling crop but is of minor value for silage. The hay is equal in feeding value to that of timothy, millet or Johnson grass.

It is being utilized more and more as a summer pasture in the Central and Southern states and is valuable as a pasture in the irrigated districts of the Southwest.

There is less danger of prussic acid poisoning in pasturing or feeding Sudan grass than larger sorghums, but care must be observed in pasturing the grass, especially in the Northern states.

Feeding experiments have shown Sudan grass to be an excellent roughage for work animals and stock cattle and only slightly less valuable than alfalfa for milk cows.

Seed production is profitable only in certain favored localities. Johnson grass seed is dangerous as an adulterant in Sudan grass seed south of the thirty-eighth degree of latitude only. There Johnson grass behaves as a perennial and is difficult to eradicate.

Sudan grass hybridizes freely with the sorghums and care is necessary to keep it from becoming a mongrel crop as have many of the sweet sorghums.

TO ERADICATE OBJECTIONABLE BIRD ROOSTS

At certain seasons of the year blackbirds, starlings, cowbirds, English sparrows, purple martins, robins and others establish nightly roosts at which thousands of the birds often gather. Frequently these roosts are located in the residential sections of cities, where their noise and filth become a decided nuisance. To remove such roosts the following methods are recommended by the U. S. bureau of biological survey:

When the roost is populated with birds not protected by federal or state laws (usually the case with blackbirds, cowbirds and starlings) and when local regulations do not forbid, the use of shotguns is the most effective in bringing relief. Shells carrying No. 6 or No. 8 shot and loaded with black powder in order to make a loud report will give the best results. Firing may be done with perfect safety even in thickly settled sections, if directed upward toward the tree tops. In large roosts, where the bird population may be as great as 30,000, the work of four or five men will be required. Shooting should begin when the first birds appear early in the evening, as then they may be easily frightened. Later on when darkness arrives the use of guns avails but little, as the birds will then move only a few yards at a time. Shooting should be kept up on successive evenings until the birds move on.

In the case of large roosts it may take five or six evenings to accomplish the desired result. Even after the birds have moved on vigilance is required lest they attempt to reestablish the roost, either in the same tree or in a new abode. If they establish themselves where they will again be objectionable, the process must be repeated until the roost is moved to a locality where it will not be a nuisance.

When protected species are concerned or when roosts are formed in localities where the use of firearms is prohibited, Roman candles may be used. Relief has been obtained even by installing electric lights or bells in trees where the birds roost.

INDUSTRY'S NEED OF OIL

"Industry's Need of Oil" was the subject of an address by George Otis Smith, director United States geological survey, department of the interior, before the American Iron and Steel Institute. The following is an abstract of Director Smith's remarks:

The last ten years might be called the petroleum decade. The world war depended upon American oil wells for

motive power. Gushers and oil booms increased popular faith in an inexhaustible supply of petroleum. Domestic production doubled and consumption more than doubled, so that Mexican oil has become an absolutely necessary part of our supply. These ten years mark a transition from oversupply to overdemand.

The ever increasing demand for gasoline and fuel oil are the outstanding oil needs, so that the question of priority must soon arise. With an estimate of seven billion barrels in the ground and the 1920 consumption closely approaching a half billion barrels, this rapid pace cannot long be maintained. Benzol and alcohol from the coke ovens promise only enough motor fuel to meet part of the present increase in demand; oil from oil shales will not be labor cheap like the petroleum now flowing from the wells. Regard for the future forces us both to plan to use less oil and to import more.

Some restriction in gasoline consumption must soon come; fuel oil in locomotives and stationary steam plants must give way to the demand for this fuel by the navy and United States merchant marine, which alone this year require one-third of the output of fuel oil. Oil as a power saver has a unique function and the demand for lubricating oil must continue to increase as the use of machinery increases.

Pioneering for oil in foreign countries by American capital will not only help secure the needed oil but will also furnish markets for American manufacturers, especially of steel products. Planning for the future needs to include more attention to supplies of raw materials to insure the country's industrial life.

AGRICULTURAL SOLDIERS

Responding to complaints made largely through the National Board of Farm Organizations that recruiting activities by the army, navy and marine corps were tending further to increase the existing shortage of farm labor, the war department, by direction of Secretary Newton D. Baker, announced today that it had taken steps to reduce to a minimum the recruiting work of the army in rural communities and to concentrate its efforts in the larger cities.

Secretary Baker, however, intimated that even before complaints had reached the department he and his associates appreciated the situation and had taken measures to reduce rural recruiting. Instructions have been issued under which the activities of army recruiting parties outside of the largest cities will be reduced to a minimum and recruiting concentrated in the more thickly populated localities.

N. E. Shaw, secretary of agriculture for Ohio, A. P. Sandles and other farm leaders in the Buckeye state brought the matter officially to the attention of Secretary Baker. Mr. Shaw said the situation in Ohio was very serious and needed immediate attention.

Charles S. Barrett, chairman of the National Board of Farm Organizations, and Charles A. Lyman, secretary-treasurer of the same body, said the war department was pursuing an enlightened course in taking an action which in itself recognizes agriculture as of paramount importance.

"The time has gone when the instruction of a soldier will be limited to drilling and other purely military matters," said an officer of the war department. "While establishing an efficient defensive force, it is the aim of the war department to create a great industrial army so that as fast as the young men are discharged they can take their places as producers."

The future army will not spend a part of the day in drill and the remainder in idleness. A nation's defense consists of something more than an army that can shoot straight, ride hard, manipulate an airship or bomb a town. A defensive army must be an army that can produce food as well as repulse an army of invasion, and to this end it is the policy of the war department to make farmers of as many recruits as can by any means be induced to adopt the profession of agriculture.

The courses in agriculture taught at the army schools are under the direct supervision of experts obtained from the leading agricultural institutions of the country.

SEPTIC TANK

With running water provided in the home provision must be made for the resulting waste. Lacking a sewer system, the discharge is often into the common cesspool, which is merely a cistern or storage pit, in sandy or otherwise porous soil, three or four feet square, 12 to 20 feet deep and loosely curbed with plank. No provision is made for carrying off the waste from the cesspool, as it is expected the liquid waste will readily seep into the surrounding soil.

H. B. Roe, agricultural engineer at Minnesota University farm, finds the drawbacks to the cesspool quite definite. A suitable soil in which to dig it is not always present; in time the surrounding soil becomes saturated or plugged with the solid or semi-solid waste matter; the cesspool is then quickly filled beyond its capacity and overflows the surface with offensive liquid waste, so that a new pit must be dug and curbed from time to time; seepage of the waste through the soil is apt to cause serious pollution of well water strata in the vicinity.

A practical alternative to the cesspool is the septic tank, says Mr. Roe. The tank, which usually has two chambers separated by a baffle, consists essentially of a watertight concrete box set below the ground to exclude all the light and most of the air. The raw sewage or waste from the house is carried into the first or sludge chamber, where it is held from 12 to 36 hours. Most of the solid waste is broken up by natural bacterial and chemical action into liquids and gases. The final discharge is from the second chamber either in a slow, steady flow or intermittently every 12 to 24 hours by means of an automatic or hand operated valve. The nearly purified liquid thus discharged may be carried direct into a little drain or into an absorption system of drain tile laid with open joints near the surface, where the purification is completed by the sunlight, air and leaching action in the soil, or it may be discharged upon the surface or into a ditch at some distance from the house where an open stream dilutes and carries it away.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS, MARCH 21, 1916.

of California Cultivator, published weekly at Los Angeles, Cal., for October 1, 1920.

STATE OF CALIFORNIA.

County of Los Angeles, ss.

Before me, a Notary Public in and for the State and County aforesaid, personally appeared Frank J. Ironmonger, who, having been duly sworn according to law, deposes and says that he is the publisher and business manager of the California Cultivator and that the following is to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to-wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are: NAME OF PUBLISHER, POST OFFICE ADDRESS, Publisher, Cultivator Publishing Co., Los Angeles, Cal. Editor, C. R. Messenger, Los Angeles, Cal. Managing Editor.

Business Mgr. Frank J. Ironmonger, Los Angeles, Cal.

2. That the owners are (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding one per cent or more of the total amount of stock). Cultivator Publishing Co., Los Angeles, Cal. R. M. Teague, San Dimas, Cal. Frank J. Ironmonger, Hollywood, Los Angeles, Cal. J. H. Yetter, Los Angeles, Cal. W. R. Wood, San Dimas, Cal. E. H. Sanford, Claremont, Cal.

3. That the known bondholders, mortgagees, and other security holders owning or holding one per cent or more of total amount of bonds, mortgages, or other securities, are: (If there are none, so state).

None.

4. That the paragraphs next above, giving names of owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholders or security holders appear upon the books of the company as trustees or in any other fiduciary relation, the name of the person or corporation for whom such interest is being held, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is (This information is required from daily publications only.)

FRANK J. IRONMONGER, Business Manager. Sworn to and subscribed before me this 25th day of September, 1920.

(SEAL) ROBERT WHITFIELD, Notary public in and for Los Angeles County, Cal. (My commission expires April 4, 1923.)

Training For Service

What science and engineering have done to develop the mechanical efficiency of the telephone, specialized training has done in the development of workers.

Plant engineers, linemen, directory clerks, toll operators, equipment installers, electrolysis engineers, trouble hunters, line repairmen, test table operators, chief operators, contract agents, building engineers, line installers, exchange repairmen, plant inspectors, trouble operators, fundamental plan engineers, draftsmen, estimate clerks, exchange operators, cable testmen, equipment inspec-

tors, wire chiefs, traffic engineers, galvanometer men, cable splicers, facilities engineers, surveyors, information operators, switchboard installers, accountants, testmen, supervisors, station repairmen, equipment engineers, directory operators, statisticians, appraisal engineers, routing operators and scores of other skilled employees are specially trained for the exacting work of providing telephone service.

Throughout all work of telephone construction and operation there is a ceaseless endeavor at mastery of service that makes for improvements beneficial to the public.

The Reliable Blue Flame Wickless Oil Heated Colony Hover

This Hover Represents our 30-Inch, 42-Inch and 52-Inch Sizes.

THE MODERN HOVER

This hover has the same chick capacity as the coal burning brooder. They are made in four sizes, 18 inch, 30 inch, 42 inch and 52 inch hover. A few of the special points on this oil heated hover are as follows:

Burns Coal Oil	No Oil Fumes
Steady Blue Flame	Visible Oil Feed
Comfortable and Easy to Operate	Convenient and Safe
Economy of Operation	No Coal, Smoke or Gas
No Wick to Trim	The Flow of Oil is Regulated Automatically
	Abundance of Heat

The Best Poultry House

By Jean A. Koethen

THE beginner who this fall plans for a house for the pullets he is to raise next winter will not decide on his plan without visiting the most successful poultrymen in his own neighborhood and studying their houses. He will have in mind, of course, the peculiarities of his own location, the direction of the prevailing wind, the slope of the ground, the amount of land available for a house. Other things being equal, he will follow the lead of his neighbors, especially of those whose experience entitles them to respect.

The one word which sums up the essential characteristics of a good poultry house is, "Comfort." It must face away from the wind. It must be dry at all times. It must be so constructed as to keep out rats and other pests. It must be easily cleaned. It must at all times allow free entrance and circulation of air. It must, if there is any difference in elevation, be built at the highest available point so that damp, cold air will drain away from it. A house at the bottom of a

waste than into 14 foot or 18 foot. They may be built of any length desired and divided into sections of 20 to 24 feet. A section, or "house," if we choose to call it that, thus contains about 320 square feet of floor and accommodates around 100 birds, for three square feet of floor should be allowed for each White Leghorn hen. Some poultrymen, to be sure, put 125 hens in such a house, but it is better to allow a little too much room than too little. Hens that are crowded are much more liable to attacks of roup than those with abundant room. These shed roof houses are generally seven feet high in front and 5 to 5½ feet in the rear and the droppings boards are high enough to permit the use of the whole floor for scratching.

Gable Roof House

Figure 2 shows a house of different type which is not as generally used, but which is particularly well adapted to a windy climate. This house has a gable roof, with the long slope to the front. The front is boarded up two-thirds of the distance from bottom

1. Shed Roofed House with Adjustable Shutter. Essenberg Ranch, West Riverside.

ravine or arroyo is a roup breeder. It must admit the maximum amount of sunshine, for sunshine is the greatest of germicides. It must provide sufficient room for the prospective flock. It must be so constructed that both sun and rain can be kept out when necessary.

The Shed Roof House

Figure 1 shows a type of house which is in very general use in Southern California. It is known as the shed roof type and is probably the most economical of all. Built to face east or south, it admits through its open front the cleansing, life giving sunshine to the farthest corner. As it has only one slope of roof there is no waste of timber or paper. The wide door at the end gives the caretaker access to both nests and roosts. The shutter of wood or canvas, fastened by hinges to the front of the roof, may be adjusted to admit any desired amount of air or sun, or may be closed entirely in a storm. These houses are usually 16 feet deep because timber cuts into 16 foot lengths with less

to top, the feed hoppers being so arranged that they are accessible from both inside and out. A wide door in the middle of each section and another at the end assure abundant ventilation. With the opening under the eaves above the droppings board tightly closed, hens in such a house are well protected in the hardest wind.

No-Yard House

Several types of no-yard house are used by California poultrymen. Some are similar to the house in Figure 1, with more room allowed for each hen. Where no yards are used four square feet of floor space is allowed for each hen instead of the three required for yarded hens. Others follow the plan of the Charles Weeks house shown in Figure 3, with variations. The essential characteristic of this house is that it keeps the hens in very small flocks. According to the original plan only 20 hens are kept in a space 8 by 8, but I have seen a house 10 by 12, housing 50 hens, which called itself a Weeks type house. Hens kept in these houses are on sand and in con-

2. Low Gable In Center of Roof. Front Closed from Bottom. Decker Ranch, San Gabriel.

finement for the whole of their laying career.

The advantages claimed for the no-yard house are that they take up less room, prevent spread of disease by keeping the hens in small flocks, make a larger egg yield possible than is usual in larger flocks. Its main dis-

3. Charles Weeks House. Cornele Ross Ranch, Pomona.

advantage would seem to be the amount of labor required to care for hens in so many units. This house is largely used around Pomona, and I have seen it in San Gabriel and Gardena.

Another type of no yard house is used, I am told, around San Diego. This is the Corning house, a long house in which the hens are kept in flocks of 1,000 or more. It is of the usual depth and divided by partitions which separate only the droppings boards, so that every hen in the house has the run of the entire house. Those who use these houses claim that the lessening of labor makes up for any possible increase of disease or decrease of production.

It is evident from what has been said that there is no "best" poultry house. Some may be better suited to certain localities than others, but in general it is the man who uses it that makes or mars any house. Given the careful sanitation and the conscientious attention to detail which is the life of the poultry industry, a man may keep his hens in any kind of house that appeals to him. Nevertheless, he will do well to follow his neighbors unless he is sure he can do better.

Poultry Queries

Conducted by J. A. Koethen

Leg Weakness in Hens

We have a number of hens with leg weakness. Can you prescribe a remedy to prevent or cure this disease?—Subscriber, Petaluma.

Leg weakness in hens is not a disease but a symptom. Sometimes what is really lameness due to rheumatism or tuberculosis is called leg weakness; sometimes weakness and prostration of the whole body, as in aspergillosis, seems to the observer to be merely weakness in the legs. The hen keeps quiet, not because her legs are weak, but because she is weak and ill from unsuspected disease. Sometimes there is paralysis caused by pressure on some of the nerves of the abdomen, due to indigestion or to inability to lay an egg which is in the oviduct ready to be laid, and the hen walks unsteadily or tries to walk and falls on the ground. Since it is useless to try to treat a symptom, it is necessary to first determine what is the probable cause of the weakness. If you will write me more fully just how the leg weakness manifests itself in your hens, what other indications of illness there are, and how they are fed, I may be able to suggest the cause of the trouble and its remedy. In nine cases out of ten, when more than an occasional hen is affected, there is something wrong with the ration.

Hatching Ducklings

Will you please tell me if ducklings can be successfully hatched in an incubator and if eggs from young ducks are all right to set. I have some fine young Mallards, now six months old, from which I am anxious to hatch next

spring.—Subscriber, Ripon.

Those Mallards will be all right to hatch from by January. I believe experienced duck men prefer to use a drake that is a little older than the ducks. If you have a drake that was hatched early last spring, or one from the year before, you ought to get

strong, vigorous ducklings. Yes on the big duck ranches all the hatching is done in incubators. The temperature must be kept a little lower, but the directions with your machine will tell you just how to run it.

Vitality for Molt

Especially in time of molt does the hen need invigorating, feather-building and body-building elements — AND THAT'S JUST WHAT LACTEIN furnishes—so beneficial—a proven fact that has created the enormous LACTEIN DEMAND. Add vitality to the hens when nature demands. LACTEIN answers nature's demand scientifically.

ASK YOUR POULTRY SUPPLY DEALER FOR LACTEIN — feed it the year round—vitalize your hens to the highest point of efficiency and health. GET LACTEIN NOW.

LACTEIN CO.

Main Office — Factory
Modesto California

Adds Profit to Any Feed

The compounding of LACTEIN Condensed BUTTERMILK, with LACTIC ACID developed to the correct degree, imparts the condition of absolute digestion to all feeds. And this means that every feed is giving up its full strength to the poultry. Combined with this point is the fact of the REAL FOOD VALUE OF LACTEIN—and the health and strength it imparts to the system of poultry. The maximum poultry profit is obtainable through the use of LACTEIN Condensed BUTTERMILK.

At the bottom of your letter to advertisers just say "California Cultivator" and prompt reply is assured.

OLYMPIC

Egg Mash—Scratch Feed

YOU can't fool chickens with sawdust. To obtain a profitable egg production you must feed more than "filler". The combination of OLYMPIC Egg Mash and OLYMPIC Scratch Feed will bring even a poorly fed flock back into laying in about two weeks.

Made from carefully selected whole grains, blended in scientific proportions, you'll find no better poultry feed than OLYMPIC Scratch. Every handful registers uniform quality and is entirely free from dust.

OLYMPIC Egg Mash with *Dried Buttermilk* is the egg making feed and all around health builder. The *Dried Buttermilk* it contains compels digestion and assimilation of all feeds.

The Test Tells

MR. W. S. FREEMAN, a breeder of Single Comb White Leghorns of Hayward, California, writes as follows:

"During April when my hens fell off about 31% normal egg production, I tried OLYMPIC Scratch Feed and OLYMPIC Egg Mash with *Dried Buttermilk*. A test was made by feeding 200 hens on OLYMPIC Egg Mash dry in hopper and OLYMPIC Scratch buried in litter, as per instructions.

"In about two weeks the production drop was checked, furthermore a decided improvement was made in the condition of the hens. The feeds were greatly relished by the hens, too.

"I intend to continue using both the OLYMPIC Egg Mash and the OLYMPIC Scratch. Yes, sir, I highly recommend both feeds to every one. The splendid results obtained on my flock can be duplicated on your flock, too."

OLYMPIC

CRATE FATTENER

With Dried Buttermilk

is probably the most profitable market conditioner manufactured. Recently one of the largest wholesale poultry firms in the West, a concern that ships more than 10,000 birds a week, reported the following results of an experiment:

92 White Leghorns fed 100 lbs. of OLYMPIC Crate Fattener with Dried Buttermilk, gained 40½ lbs. in eight days.

A like number fed 180 lbs. of corn, oats, barley and semi-solid buttermilk, gained but 32½ lbs. in eight days, or at the rate of only 17½ lbs. per 100 lbs. of feed.

Also ask your feed dealer about:

- OLYMPIC Chick Mash
- OLYMPIC Hog Feed
- OLYMPIC Dairy Feed
- OLYMPIC Calf Meal
- OLYMPIC Stock Feed
- OLYMPIC Horse Feed
- OLYMPIC Pigeon Feed
- OLYMPIC Alfalfa Molasses Feed

*The Finest Story Ever
Written for Farmers—Free*

Have You Received Your Copy Yet?

ARE you interested in better living—more comfort and leisure, less labor?

Then you must have this book. You have never read anything like it. You will never put it down until you have read the last word of it.

More interesting than many a novel, especially to women, it tells how city comforts have come to the farm; how every dark corner has been brightened, how the burden of toil has been lifted from women's shoulders, and sons and daughters made more contented.

Reading this book, a farmer sees *his* home transformed into a city dwelling; his

wife happier with less toil and more comfort; his children with a new satisfaction in the farm.

Inspired by the message of this book, thousands of farmers have brought electricity to their farms, and year 'round contentment and happiness with it.

You can read this same book with its wonderful message. You will enjoy this romantic tale of how greater happiness and comfort have come to the farm. Send for it now, while copies are still available, free.

Walnut Prices Help Swat H. C. of L.

SOME cooperators have held that one result of cooperation would be "all the traffic will bear." It is different these days; the intelligent cooperator says "Give us fair return; make the producer a fair price." And a fair price these days, in the minds of most of us, at least, has a somewhat downward tendency from the prices of last year. Raisin growers acted on this general principle. Wheat growers, while they are not cooperating as yet to any extent, are likewise accepting lower prices. Now come the walnut growers with 1920-21 prices which are materially lower than those of last year. The walnut industry has shown wonderful strides, and this is due in a large part to the intelligence of the management of the walnut growers cooperative association. To give an idea of this growth here are shipments and prices obtained over a period of a dozen years:

Year—	Production (pounds)	Price No 1 Soft Shell (cents)	Price Fancy Budded (cents)
1909.....	18,700,000	11.5	15.0
1910.....	19,200,000	15.0	17.5
1911.....	25,000,000	14.0	16.5
1912.....	22,500,000	14.0	16.5
1913.....	22,700,000	16.0	19.0
1914.....	17,800,000	16.5	20.0
1915.....	29,650,000	13.6	17.0
1916.....	29,200,000	15.5	19.0
1917.....	33,000,000	20.1	24.1
1918.....	40,230,000	28.0	31.5
1919.....	57,000,000	31.5	34.0

Prices F. O. B. California.

The opening quotations to the wholesale trade, as announced today by General Manager Carlyle Thorpe are as follows, f. o. b. California:

Diamond Brand No. 1, Soft Shells, 22½c; Diamond Brand No. 2, 16½c; Diamond Brand Budded, 25½c; Standard Budded, 22½c per pound.

The costs of automobiles, silks, cottons and other staple commodities have been tumbling topsy turvy, but nothing much has happened to food prices, aside from the partial collapse of the sugar market which still shows an advance of 100 to 140 per cent pre-war prices, so the walnut growers deserve credit for establishing a worthy precedent by bringing the cost

of at least one staple food product down to the bottom of the toboggan.

This action upset all precedents and came as a complete surprise to the trade since it is well known that the walnut growers have brought the present crop to maturity under pressure of the highest production prices in the history of the industry. Then, too, the output is much lighter than last year's, and the fact that the walnuts are of much superior size and quality naturally made it appear probable that firm prices might be expected.

General Manager Thorpe says the board of directors decided upon a sharp reduction in opening prices because they were sufficiently familiar with public sentiment to know that heavy price reductions in practically all foodstuffs must ultimately be made and that the walnut growers felt they might as well lead the procession by swinging the axe good and hard, thereby getting back to a reasonable price basis the quicker, and profit by maintaining the confidence of the public. He predicts that the low prices named will result in a swift and steady movement of new crop walnuts and that they will develop a strong and advancing market which will prove of ultimate advantage to the growers.

Not infrequently the farmer has been called a profiteer, but this action on the part of the California Walnut Growers proves that the farmer is one of the country's foremost price cutters.

In connection with this deep cut in prices it will be remembered that the opening prices named by the association in 1919 were regarded by the trade as being so decidedly in keeping with the trend of the times, as regards fair prices, that General Manager Carlyle Thorpe was in receipt of many telegrams from wholesale grocers, complimenting the association growers upon their fairness as well as their sound business judgment. The result was that walnuts moved faster than ever before in the history of the industry.

It will be remembered (Continued on page 511)

OAKLAND OWNERS REPORT RETURNS OF FROM
18 TO 25 MILES PER GALLON OF GASOLINE
AND FROM 8,000 TO 12,000 MILES ON TIRES

THIS NEW OAKLAND SENSIBLE SIX FOUR DOOR SEDAN IS POWERED WITH THE FAMOUS 44-HORSEPOWER, OVERHEAD-VALVE OAKLAND ENGINE

ALMOST the finest accomplishment of the Oakland Sensible Six Sedan is the character of service it has delivered the American farmer. Summer and winter, over good roads and bad, this capable and sightly car has afforded him and his family the utmost in efficient personal transportation. Today the high-power and light-weight principle of construction underlying Oakland's thrifty performance is embodied in an even stronger chassis of longer wheelbase. The comfort, the usefulness and the reliability of this competent model combine to a value not to be equaled in any other type of car.

One Dollar Yearly

The Livestock Show in the South

By R. P. Royce

THE third annual Los Angeles Livestock Show is now a matter of history. For eight days Southern California was provided an opportunity to see at first hand a showing of better livestock that was a distinct credit to the entire West. When it is recalled that this annual show was brought into existence but three short years ago, and that the conditions surrounding the initial event were the most discouraging that any similar show has ever been called on to face, the 1920 exhibit must be reckoned a success. The success of a livestock show is too often measured by the gate receipts and the real purpose—the inspiration for a community to adopt improved breeding material because of the economic possibilities of better blood—is often overlooked. If the 1920 gate receipts are to be used to measure the success, then it can be frankly confessed that the management was disappointed. But if one is inclined to be an optimist and believe that the future welfare of Southern California was served

in a definite and emphatic manner, there can be little doubt but that the show was in every way a success. This matter of livestock is a very real problem for Southern California. The leading agricultural authorities of that section of the state are convinced that livestock holds the key to increased or even maintained production. Every orchard, grove or truck farm is facing, or soon will face, the problem of soil fertility, and it is becoming increasingly clearer that only through the medium of animal fertilizers can success be registered. Therefore the first problem is one of livestock and the second is one of better livestock. In short, the purpose of the Los Angeles show is to draw attention to the importance of animal husbandry and particularly to the advantage of handling the improved sorts. Such being the case, the show just closed fulfilled its purpose. The show was staged on the grounds of the Sixth District Fair Association, and because of cramped

quarters the management was forced to depart from the plan followed in former years and found it necessary to erect two barns within the infield across from the grand stand. Such a plan necessitated the crowds crossing and recrossing the track. Another oversight on the part of the management was a failure to provide attractions that would draw the night crowds. There were plenty of attractions during the mornings and afternoons. Judging occupied nearly all of each forenoon and the afternoons were overcrowded with events ranging all the way from a light horse show to bathing girls. Indeed, the multiplicity of afternoon events crowded in on the visitors to such an extent that at times a three ring circus would have seemed dull in comparison. Probably the management learned an expensive lesson. Another feature of the show that was the cause of wide criticism was the exorbitant charge of one dollar to the main grand stand and the

smaller stand serving the horse show. Fifty cents to enter the grounds and a dollar to get a seat was too much of a good thing. Notwithstanding the few points subject to criticism, that the exhibitors and visitors were inclined to overlook, the show pointed the way to the future and demonstrated that there was a real purpose served. Taken as a whole, it was the most ambitious effort yet made in the Southland. Quality ran high in all departments and indicated that during the past three years a marvelous livestock development has been made. It is understood that an attempt is to be made to secure an appropriation from the next legislature to be used to establish the show on a permanent basis. **The Dairy Cattle** The outstanding feature of the entire show was the exhibit of dairy cattle. Each important breed was represented, but the showing made by the Holstein breeders—practically all from the South—was declared to be (Continued on Page 518.)

We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

EDITORIALETTES

The lives of five persons paid the penalty for endeavoring to beat an overland train. This was at the crossing of the Santa Fe near Glendora, last Sunday afternoon, with full view of the track and the approaching train, with a wigwag going in full operation and with three other automobiles stopping to give the train the right of way acting as warning to the driver of the death machine. Why didn't he stop? No one ever will know, for every one of the five in the machine was instantly killed. The number of lives being sacrificed to this speed mania is pitiful, even appalling.

An overland train drawn by one of the powerful compound locomotives coming down grade often has a speed approaching 60 miles an hour. At that rate of speed a train a quarter of a mile away arrives at the crossing in 15 seconds. The spirit of the gambler, which is in all of us more or less, may induce us to take a chance. If our speed beats the 15 seconds of the overland we are given the thrill because we got away with it. If, however, we fail to step on the gas hard enough and just equal the speed of the train, the thrill fails to materialize and sorrowing friends endeavor to explain how it happened. The 15 sec-

onds we would have stopped our car, increased by about one second for each car of the train as it passed over the crossing, would have caused loss of only one-half to one minute of time, which would have made us dead sure. That is better than being sure dead.

A good suggestion for our congressmen was made by a subscriber recently: "Instead of free seeds, why not free automobile parts?" Respectfully submitted.

Some months ago the Cultivator had an article regarding the George Junior Republic and made reference to remark by R. A. Condee, farmer and instructor in animal husbandry there, in a word, that agricultural training of boys is made more effective by association with animals of high breeding. At that time the animals in "the Republic" consisted of a few grade and fewer pure bred Holstein cows and Duroc-Jersey hogs. Later a young bull calf of the type of breeding desired was secured and a couple of helpers added to the dairy. The months passed, the young bull developed and was exhibited at the recent Los Angeles Livestock Show. He proved to be a winner of the grand championship for the breed, and in that winning he had no easy task, for animals exhibited were representatives of the finest breeding on the Pacific Coast.

At no time has Mr. Condee had command of sufficient capital to purchase the high type of animals he would have liked. It has been a matter of slow building up. But good judgment and knowledge of the points of animals which are winners proved even better than the possession of unlimited capital. All honor to Mr. Condee and to the boys who have worked so faithfully in caring for and fitting the animals for the show.

Once upon a time a man rushed up to the station master and said: "Can I catch the 10:20 train?" The station master replied: "Sure, if you run fast enough; it left two minutes ago." That man had just about as good a chance to catch his train as does the irrigator of deciduous fruit trees to save his next year's crop if he assumes that he can delay his irrigation too late in the fall and still produce a crop of plump fruiting buds next season. Next spring's mails will bring to this office innumerable requests for help for peaches showing little leaf, for fruit trees showing wealth of sickly looking bloom but few fruits setting. It will simply be a case of backing up to the preceding fall and irrigating. Lack of fall irrigation is not the only cause of spring troubles, but it is a prolific cause, and the grower may well take advantage of every opportunity to fill his late summer and early fall soils with the "optimum" of moisture.

We are heartily in favor of the initiative and referendum. We believe that the past few years have shown their worth to the state of California. On the other hand, their continuance is jeopardized by their unwise use. This is proven by this particular year when a score of measures are passed up to the voter to decide. Most of these should have gone directly to the legislature. The trouble is that few of the voters have opportunity or time to fully familiarize themselves with these measures and vote intelligently. It is a fairly safe proposition, where one lacks understanding of the measure on which he is voting, to vote No. However, the duty has

been put upon us to decide these questions, and there is nothing to prevent the voter from having the full text of the measures in question in time to read and inform himself. It is now only two or three weeks until these questions are to be decided by the voters and it is unfortunate that the text of the proposed laws is not in their hands.

Of the score of measures on which the voters are called upon to decide the Cultivator must advise a No vote on Number 7, "An Act Declaring it to be Unlawful to Dissect, Vivisection, Torture or Experiment upon Any Living Human Being or Living Animal, etc." The title sounds humane and there is appeal in it to every human with a heart. But in the text it says "The words dissect, vivisection, etc. are defined to mean that dissections or experimentation upon, etc." Further "It is unlawful * * * for the purpose of experimental physiological or experimental pathological investigation, etc." The college of agriculture of the University of California asserts that the success of this measure would prevent the production within the boundaries of this state of hog cholera serum, of black leg vaccine, of small pox vaccine, of an almost innumerable number of remedies, or rather preventives, of deadliest diseases of humans and of animals. This is apparently admitted by those working for the passage of the bill for we have just received from Mrs. Rosamond Rae Wright, president of the California Anti-Vivisection Society, an article or address by Dr. Wm. R. Bradshaw "The Uselessness of Biological Products in the Treatment of Livestock Ailments." Much is made in this address of the fact that hog cholera is not a cure, only a preventive. That is also the claim of the believers in the serum treatment; it immunizes well hogs. Likewise hydrophobia once developed in the human being has never been cured. But literally thousands of children given Pasteur treatment after inoculation with the deadly virus through bite of rabid dogs have been saved a horrible death. Many safeguards to humans would be removed and great suffering to livestock will result if the anti-vivisection initiative act is approved by California voters. It is No. 7 on the ballot. Vote No.

Custom of centuries makes it entirely proper to terminate the life of the old family cow that leather may be produced to protect our soles from the pricks and bruises of thorns and pebbles or even to slaughter the gamboling kid that our hands may be covered for—no, not comfort—simply for vanity. But that to inconvenience or possibly sacrifice one animal that hundreds of other animals or humans may be saved to usefulness and service is wrong, is cruel, is uneconomical, is even unethical will be a hard problem to solve to the satisfaction of California voters.

As one of its slogans in the fire protection campaign which it is conducting in the Minnesota pine country the department of agriculture suggests: "Fire Destruction is Quick, Forest Growth is Slow." Another equally striking and true is: "One Tree Will Make a Million Matches; One Match Will Destroy a Million Trees." The Cultivator wishes it could express more strongly than ever the truth that we should take no chances with matches, camp fires or cigarette stumps. Burnt timber pays no wages. When a fire is discovered

every one of us should become a member of a volunteer fire department, gather in others and do our best.

Riverside is dressed in her best for she has invited all California to visit all this week and till Tuesday of next week at her agricultural fair. Reports of the first days success indicate the greatest yet held there. All classes are well filled and livestock especially is making a great display. Secretary Van Pelt is highly gratified at the showing. Perhaps one of the principal features is the exhibit of the Riverside County farm bureau. Mr. Bennett, Mr. Klein and others of the Cultivator staff are on hand getting a story for next week's paper.

A subscriber to the Cultivator came in the other day and said: "Say, instead of jumping off on this idea of taxing all of us land owners and allowing personal property holders to go free, why can't we have an enactment, or at least a readjustment, which will permit a land holder, whether an individual or a corporation, to hold not to exceed 1,000 to 2,000 acres of land, according to its producing possibilities." This suggestion has been made by a speaker before a gathering of Sacramento Valley farmers. There certainly must be some way of securing more equitable division or distribution of the land than through dispossessing by excessive taxation. It is not a fair distribution of taxation and is not American.

"Making a Wreck of California's Lemon Industry" is the title of a very forcefully written booklet which is being circulated in many of the lemon producing districts of the state. It is by J. L. Matthews of Covina, Los Angeles County, and is filled with a vast number of facts regarding the lemon industry and the incomparable loss which has come to it. It has a political trend which makes it impossible for the Cultivator to use.

KEEP THEM AT HOME

California has suffered because of the unwelcome inhabitants of trees, vines and fruits which have been brought from almost every part of the world. Nearly all our most serious pests are imported. Now we have learned to keep them out, at least vast numbers of them, and we hope we will learn to keep all such pests from entering either through the harbors of the Pacific or the Atlantic. Likewise, let us be equally as careful in sending them on to others. Our own productive industry will be benefited by such a course because of the good will of other countries.

E. H. Ehrhorn, formerly of California, now chief plant inspector of the Territory of Hawaii, appeals to California in this particular. The board of commissioners of agriculture and forestry of the islands has found it necessary to rule that no shipment of potatoes or apples in the natural or raw state, whether by freight or express, shall be permitted to be imported into the Territory of Hawaii from ports on the Pacific Coast of the United States of America unless such shipment is accompanied by a certificate signed by a qualified officer of the city county or state from which the shipment is made, that the shipment has been inspected by him and is shipped free from insect pests and plant diseases.

Regarding this action, Mr. Ehrhorn writes Commissioner Ryan of Los Angeles County:

"This action by the board has been taken as a result of the poor condition of shipments of potatoes and apples arriving here from Pacific Coast ports, due to the infestation and infection by various insect pests and plant diseases, which are in a large measure responsible for the poor quality of the above mentioned commodities offered for sale in the territory and which in the past have been the cause of the rejection of a number of shipments."

Pruning Mature Orange Trees

By Robert W. Hodgson

FIFTEEN years ago and more it became evident that many of the trees in our citrus orchards did not measure up to the best of the variety to which they belonged. A. D. Shamel of the department of agriculture brought that fact home to citrus growers and uncovered the reason for this condition and its remedy. The reason, briefly, is: most of our commercially important citrus varieties are extremely unstable and constantly breaking up through bud mutations into inferior strains which unwittingly have been propagated and planted. The remedy is the use of buds for propagation purposes taken from the very best trees only and the top working of inferior trees to the best strains.

The Unstable Navel

As an illustration of the importance of this fact it is only necessary to follow the history of the Navel variety. Known here only for about a half century, it has given rise to a number of well known strains, including the Thomson, Golden Nugget, Navelencia, Buckeye, Yellow and others. In contrast, let us consider the history of some of our deciduous fruit varieties. The Baldwin apple of today is exactly the same as it was 150 years ago. As a class deciduous fruit varieties are rather stable.

This instability of citrus varieties influences the pruning. Each strain and type has its own habit of growth, some exhibiting rather wide differences from the original and standard variety. Many of our orchards con-

tain a half dozen or more different strains of the same variety yet the trees are all given treatment and are expected to respond similarly.

Still another factor is the peculiar property possessed by citrus trees in California as well as by certain other plants of producing different kinds of growth in the same individual. This quality is known as polymorphism and greatly complicates pruning.

Not all the leaves or other parts of a citrus tree possess the same efficiency. There are wide differences in tissue efficiency. Water sprouts and suckers have been well named, for it has been demonstrated recently that both are entirely parasitic in nature, abstracting excessive amounts of moisture from the tree and not returning elaborated foodstuffs to any degree. Sucker leaves have been found to evaporate many times the water per square inch that is lost by fruit wood leaves and to manufacture but a fraction as much carbohydrate material. Elimination of such growth makes for greater efficiency in the tree. On the other hand, old coriaceous leaves, past their prime, have been found to act similarly and to be a drain on the tree. Old hardened tissue beginning to show deterioration should be removed for the greater efficiency of the tree. Differences in tissue efficiency, as will be indicated later, play a vital part in regulating pruning practice.

Why We Prune

Large trees are expensive to handle.

A tall tree costs much more to fumigate than a medium sized tree, and the same applies to spraying. Labor is today perhaps the biggest factor in costs of production. The old Baronio system of lemon pruning, and the more recent hedge pruning, in which the trees were sheared off level at an arbitrary height, reflect the fact that it sometimes does not pay to climb too high for the fruit. Perhaps that time is coming again. I sincerely hope not, but it is a fact that, located on deep and fertile soils, citrus trees if not pruned are apt to become too large for economical fumigation, spraying and picking of the fruit.

Again, if left alone the trees become so dense that the major part of the crop is borne on the outside. To protect themselves against the too intense sunlight they develop a very dense outer foliage which results in the above mentioned failure to bear inside fruit. Noticeable differences in the response of the trees to this illumination factor occur in different parts of the citrus districts. The Washington Navel orange trees at Whittier and at Bakersfield look like two different varieties. At Whittier the tree is a strong, sturdy, upstanding, and not too dense tree. At Bakersfield it is a dwarf, very compact and dense, and decidedly squatty. No sunlight whatever filters through to the interior.

It is possible by judicious pruning to so regulate the amount of light filtering into the trees as to encour-

age interior fruiting to the point where a medium sized tree carrying fruit well distributed throughout its bearing area will greatly outyield a much larger tree the crop of which is all borne on the outside.

Rational System

I believe that a rational system of citrus pruning is based upon, first, recognition of the fact that there are different kinds of growth in citrus trees, together with the ability to distinguish them; second, a knowledge of their performance; and third, a clear understanding of differences in tissue efficiency.

What are the kinds of growth to be found in citrus trees? The writer prefers to classify them under two heads; namely, vegetative sorts and fruit wood, but the common terminology used by pruners is "sucker wood," "intermediate types" and "fruit wood." Trees propagated from vegetative growth buds grow rapidly and vigorously from the beginning. They make fine, vigorous appearing nursery trees. Such trees in the orchard at three years frequently are larger than fruit wood trees at five. They make a splendid appearance but come into bearing rather late, sometimes delaying this until seven or eight years of age. For ten or 15 years they may bear well, although the fruit is apt to be coarse and of inferior quality. They are weak mechanically and require propping or wiring and are subject to much breakage. Frequently after ten or 15 years of fair bearing they begin to show signs of deterioration (Continued on Page 512.)

Thoroughly Equipped Modern Ranch

SINCE old hide and tallow days the Spanish grant ranches of California have been producers of much of the livestock of the state. In the earlier days the hides, and possibly the horns, were amongst the principal factors in the production, for tallow was not always abundant. But there has been a material change and some of the most aristocratic of pure breds of the state, and even of the nation, are produced on these old time stock ranges.

Amongst others, on the sides of the Spadra hills in eastern Los Angeles County is the old Charley Wright place five miles west of Pomona. This place has great stretches of some of the richest land in the world, lying along the bottoms of San Jose Creek, and

other rich grazing lands in the Spadra hills, stretching down toward Fullerton nearly seven miles. In earlier days Mr. Wright had thousands of head of cattle and hundreds of horses mostly of the old time mustang type.

Today's scenes on the same ranch are materially different. It is now the site of the Diamond Bar Ranch, prop-

erty of F. E. Lewis. There are 7,500 acres within the boundaries of the ranch and a few hundred other acres are required for the various activities. Mr. Lewis has owned this place but a few years, but has made wonderful changes in its appearance in that time. The principal interest as yet has centered in the production of pure bred

Duroc-Jersey swine. It is one of the larger producers of pork and pure breds. There are thousands of porkers which have been thrown out from the pure breds. Of these there are something like 300 registered and strictly high class stock, but out of the hundreds capable of registry and considered amongst the purest of the pure breds they have secured, through most rigid system of culling, 48 sows which are now producing future prize winners.

There are also 1,000 grade Herefords which are being built into a much finer beef animal by the continual use of pure bred herd headers. The time will come, and it is not far distant, when the Herefords, like the porkers, all will be pure breds. In fact, it is all (Continued on Page 524.)

DIAMOND BAR RANCH				Year				Year				HERD RECORD			
Name & No.	Sex	Age	Color	Year	Year	Year	Year	Year	Year	Year	Year	Year	Year	Year	Year
See's Line Mark															

Reproduction in miniature of upper portion of page from breeding record as used on Diamond Bar Ranch. The entire page is 11 by 14 inches with perforations for use in loose leaf covers, lines for records of 11 animals. This is declared one of the best of labor saving appliances on the ranch. This Record is supplemented by a series of cards which follow the pigs from pen to pen—blue for boars, buff for sows, and salmon color for porkers.

Picture at left shows train moving down the line and troughs so built as to receive feed from the tank car. Attendant is getting ready to operate feeder and fill trough as the train passes by. Center picture, a small portion of farrowing barn with locomotive passing down the line. At right, R. K. Walker at the "throttle" ready to discharge mixture of buttermilk and concentrates into trough. The feeding is done while train is in motion.

Agricultural News Notes of the Pacific Coast

Northern California

The rice crop is estimated at about 4,000,000 bags.

An outbreak of anthrax is reported at Grimes in Sutter County.

Mendocino's Apple Show will be held at Ukiah October 27-30.

Sonoma County will have slightly smaller prune crop than last year.

Sonoma County reports wonderful drying weather for her prune crop.

A farm bureau hog auction was held at Durham, Butte County, October 14.

Pear blight is receiving vigorous attention in orchards of El Dorado County.

A dehydrating plant at Roseville in Placer County is handling large quantities of Zinfandels, Tokays and Matros.

A prune and apricot exposition was held at the newly established deciduous experiment station at Mountain View, October 6-8.

The two farm centers of Capay Rancho in Tehama and Glenn Counties made a large display of products at the Glenn County fair.

Sugar beet farmers of the Pleasanton section of Alameda County are securing good sugar tests on their beets, tests running as high as 22.8 per cent.

Potato Inspector Shear of the state department of agriculture has been on a tour of inspection through Sonoma, Siskiyou and Humboldt Counties.

The 1920 hop crop has been selling at prices ranging from 55 to 62 cents. Large shipments have been sent to Japan, Australia, India and South Africa.

County Horticultural Commissioner Dutton of Mendocino has stopped the bringing into the county of fruit boxes from Sonoma County in an effort to keep out phylloxera.

Local centers of the Glenn county farm bureau will hold meetings at Capay, October 20; Elk Creek, 25; Grapevine, 27. The annual meeting of the county bureau will be held at Orland October 23.

An organized campaign for control of predatory animals is to be undertaken by the state department of agriculture working with S. E. Piper who has been in charge of such work for the United States biological survey in the western states.

V. G. Stevens has been appointed county horticultural commissioner of Contra Costa County. Stevens was formerly with the United States bureau of entomology as first assistant under R. L. Nougaret, now chief of the viticultural service.

The California Bean Growers Association announces schedule of advances which it will be enabled to make to members for 1920 crop. It is: Large whites, 3c; small white, 3c; pinks, 3c; blackeyes, 3c; red kidneys, 6c; red Mexicans, 3½c; cranberries, 3c; Bayous, 4c; Tepary, 1c; Henderson Bush, 4c.

No fall shearing was done by many sheepmen because of excessive demands of shearers who had formed combination and demanded 17½ cents for hand shearing, 22½ for machine shearing. This, together with the state of the wool market, was too much for the sheep owners and the sheep are still wearing their fall coats.

Central California

Olive picking has started in the Lindsay district of Tulare County.

Farm bureaus of Tulare and Kings Counties are considering establishing a cooperative sawmill.

Cotton harvest is in full swing in the Corcoran district of Kings County. Cotton is all short staple.

Associated Raisin Company has begun suit to prevent delivery of a 44 ton crop of Sultana grapes to an outside packer.

Shafter Growers Association of Kern County has secured a large quantity of rooted grapevines to distribute to members.

Cotton growers of the Lindsay district of Tulare County have formed an association and will incorporate in regular form.

The Chamber of Commerce of Lindsay, Tulare County, is urging all who can to list rooms to accommodate visitors and fruit workers.

California Peach and Fig Growers announces that I. J. Condit has been employed as field man to assist growers in cultural problems.

Apple evaporators in the Watsonville district are all busy. A larger proportion of the apples are being marketed fresh than last year.

A new grain elevator is being erected at Stockton by the Sperry Flour Company. It will have a storage capacity of 160,000 bushels.

Since picking started in the olive orchards of Tulare County growers generally are raising their estimates, and a large crop is now expected.

The almond growers state that the freight rate from Spain to New York on almonds is less than half the rate from California to points east of the Mississippi.

A Tulare County farm bureau cow testing association has been formed. It is expected that a tester will be secured so that the work can be started early in this month.

Drainage demonstrations were held last week in the vicinity of Watsonville, Santa Cruz County. They were under direction of the county farm bureau and the university extension.

Olives processed in accordance with new ruling of the state board of health for 40 minutes at 240 degrees Fahrenheit are said to retain their excellent appearance and good flavor.

This is pomegranate packing season at Porterville. Pomegranates are bringing fancy prices in Eastern markets and additional plantings are being made each year in this section.

Members of the California Associated Olive Growers met recently at Lindsay to discuss details of the contract with the California Packing Corporation and to pass on question of employing inspector.

Victoria Brunaro Johanna, a Holstein cow belonging to Mrs. Anne Donders of Fresno, leads in the seven day milk division of all cows under five years, according to report of the Holstein-Friesian Advanced Registry.

An intensive campaign for members has been started by the Farm Bureau Marketing Exchange recently organized in Merced, Madera and Stanislaus Counties. L. D. Love of Livingston has been appointed campaign manager.

Southern California

Yucaipa, San Bernardino County, celebrated Apple Day October 8.

Monday, October 18, will be Farm Bureau Day at the Riverside fair.

Taxes for 1920 become due October 18 and delinquent December 6.

The two walnut houses at Carpinteria, Santa Barbara County, are ready to receive nuts.

Los Angeles County farm bureau testing association now is testing about 4,000 cows.

There is a notable display of poultry at the Southern California Fair now being held at Riverside.

The Riverside County farm bureau is discussing advisability of raising membership dues from \$2 to \$5.

Associated Chambers of Commerce of Riverside County met at Arlington, October 5, in annual meeting.

The new state speed law went into effect October 1, making speed regulations uniform through the state.

A drainage district is proposed in the Cypress section of Orange County to cover some 8,000 acres of alkali lands.

A new citrus packing house is to be built by the Anaheim Citrus Association. The new house will cost \$75,000.

The walnuts of the Carpinteria Valley are showing up of fine quality and there has been little blight in the groves.

The cooperative cannery at Riverside has closed its season's run, having handled 2,300 tons of apricots and peaches.

The Riverside County farm bureau is preparing extensive exhibits for the Southern California fair to be held at Riverside.

Los Angeles harbor is rejoicing in news that freight schedules have been sharply reduced on railroads terminating at that point.

Cotton growers of the Coachella Valley have formed an association, agreeing to pay not more than two cents a pound for picking.

Embargo against shipment of alfalfa into California has been extended to include Utah, Idaho, part of Wyoming and Washoe County, Nevada.

County Horticultural Commissioner Sharp of Riverside reports that county has 25,037 acres planted to citrus fruits, 25,020 to deciduous fruits.

The California Lima Bean Growers Association has named prices at 8 cents for "Seaside" and 7½ cents for the regular choice re-cleaned grade.

Banning has had favorable prune drying weather. The "Press" says: "Prunes are being knocked, picked up, dipped, and laid out as fast as possible."

Citrus growers of Ventura County held a field institute at the Riverside experiment station on October 8. Professor Vaile was in charge of lectures and demonstrations.

At a recent meeting of the Farmers Alliance at Blythe a committee was appointed to canvass the Palo Verde Valley to learn the sentiment as to kind of crops to put in for 1921.

Lettuce growers of Westmoreland, Imperial County, expect to have the earliest lettuce crop in its history. It is expected to begin shipping in time to reach Eastern Christmas market.

The Coast and General

The pecan crop of the Mississippi Valley is very light.

The Pacific Coast cranberry crop will be large this year.

October 30 will be observed in New York state as Apple Day.

The fair recently held at Tillamook, Oregon, brought out fine display of dairy cattle.

Washington reports greatly increased interest in potato seed certification this year.

Fear that recent light rains in Washington would crack the prunes are proved unfounded.

The Oregon Growers Association has just completed a new apple packing plant in Green Valley.

Fruit shippers of western Washington are determined to secure from the railway a lower freight rate.

Sweet potato curing houses in Texas have been erected to the number of 128 with a total capacity of 1,000,000 bushels.

Fruit growers of Terrace Heights, Washington, have formed a cooperative marketing association and purchased warehouse.

The Interstate Commerce Commission has announced ruling that will enable carriers to make additional charges on diversion.

Japan has barred importation from United States, Canada and other countries of fresh apples, peaches and pears to prevent introduction of codling worm.

Presidents of two of the largest tire manufactories in this country have recently denied rumors that short staple cotton was being substituted for long staple.

According to estimates of the Oregon Cooperative Growers Association, the prune crop of Oregon and Clark Counties will not exceed 60,000,000 pounds.

The supervisor of vocational education for Arizona reports 47 applications for the home economics course. There is shortage of teachers in this department.

The Woman's Club of Phoenix is offering prizes to pupils of the public schools for the best exhibits of sweet peas at their annual sweet pea exhibit held each spring.

New York buyers of California wine grapes report serious shrinkage in weight, due to poor packing and handling. Alicantes have come through in better shape than other varieties.

Apple growers of Prosser, Washington, are now shipping out Winter Bananas, Jonathans and King David. Several shipments of King David have been made to Manila and Liverpool.

Two Arizona men have been elected to receive the Rhodes scholarship course at Oxford. Franklin D. Walker of Flagstaff will go this year and Bradford Trenham of Bisbee will go in 1921. Both are University of Arizona men.

Arizona's share of the national forest receipts for the current year is \$189,402. This sum is divided among the counties where national forests are located, and according to law expended for the public roads and schools of such counties. Ten national forests are located wholly or partly in Arizona.

Advance Announcement

BEST **TRACKLAYER** "Thirty" TRACTOR

Due to the insistent demand of farmers and orchardists upon the C. L. Best Gas Traction Company for a high grade tractor that could be used where the power required did not justify the purchase of a Best Tracklayer Sixty, the Company has perfected a 20-30 Horse-power model of practically the same design as their famous "Sixty"

AFTER months of trials and tests, this model is declared an exceptionally high-grade tractor, and factory production has been started. The design and materials used in this new "Thirty" are the outcome of a decade of high-grade tractor-building experience, and the knowledge gained by the successful operation of the Company's various models in the field. With each model, improvements have been made until today the "Thirty" stands a mechanically perfect tractor.

This new model is especially adapted to orchard work. It is small, compact, turns in its own length and is very easily managed. It will also eat up practically any belt job to which you may put it.

Working parts of the "Thirty" are entirely enclosed, and all gears are run in a bath of oil. Anti-friction bearings are generously used at points where long manufacturing experience dictates. Manganese steel tracks insure long life to the truck units. All working parts, though enclosed, are easily reached. The power is generated from a Best motor

—a motor which has long been recognized as the leader in heavy-duty tractor motors—bore $4\frac{3}{4}$ ", stroke $6\frac{1}{2}$ ", valve-in-the-head. The following additional description of the new "Thirty" will prove interesting:

Power Rating: Twenty h. p. at the drawbar, 30 h. p. at the pulley.

Speed: High, $3\frac{1}{16}$ M. P. H.; low, 2 M. P. H.; reverse, $2\frac{1}{2}$ M. P. H.

Dimensions: Length (not including seat), 9' 4". Height, top radiator, 59". Width over all, $11\frac{1}{2}$ " shoes, $53\frac{1}{4}$ ". Width between tracks, $30\frac{1}{4}$ ". Ground clearance, $11\frac{1}{2}$ ". Drawbar, $16\frac{1}{2}$ " high. Track centers, $41\frac{3}{4}$ ". Standard equipment, $11\frac{1}{2}$ " shoes. Length of track on ground 60". Stationary Drive: Standard pulley, diameter 12", with a 7" face. Pulley speed, 800 R. P. M. Belt speed 2513' per minute.

Weight: 6700 pounds.

Write for full information, specifications, prices and name of nearest dealer.

San Leandro

California

FAGEOL

WALKING TRACTOR

The three outstanding reasons for this tractor's superior performance are the positive traction of its grouser wheels, the solid live drive axle operating through individual clutches in each drive wheel, and protection of moving parts from dust.

It works with equal satisfaction in all soil conditions. Wet places are navigable because the grouser wheels are self cleaning.

Choosing Soils and Crops

By Ernest Branton

UNDER the auspices of the Los Angeles County farm bureau Prof. J. W. Nelson of the state college of agriculture lectured at Hansen Heights on choosing soils when looking for a home place; selection of proper crops and best soil practice. The meeting was presided over by C. H. Landenberg, local director of the farm bureau, who introduced V. F. Blanchard, assistant farm adviser, to make a few announcements of future meetings contemplated in the Hansen Heights section. The more important of these will be a pruning lecture and demonstration by Dr. J. C. Whitten. Prof. Nelson then gave the audience some extremely profitable advice on soils and their treatment, of which the following is a brief synopsis.

"Were I looking for a place to locate I should first consider the soil. Usually one settles first and considers soil problems later. Much money is sometimes spent on perfecting titles, but not a penny on soil surveys,

years of light rainfall. In some parts trees have stopped growth in midsummer though leaves still cling and at times one was seen where leaves have dropped. Too often the owner harvests the fruit and then sits down in the belief that his season's work is done. But this is the very period when the tree prepares for the next year's fruit, if fruit is to be borne. From June to November deciduous trees store vitality and food for the coming crop. I found in many orchards soil 'air dry' below the upper eight or ten inches, so dry, indeed, that it was actually drawing moisture from the tree roots, the small feeding roots dead and in some case the trees dying.

Reading Soil and Tree

"Not until June 25, ranging to August 5, could we tell, even under the microscope, the leaf buds from the fruit buds. Then the work of storing and preparation goes on until November, during which month all becomes dormant and leaves drop. We have made a set of charts, based upon crop production following series of dry years and series of wet years. The winter of 1917 was a wet one in our best prune districts. The following summer, 1918, the yield was good; the second season, 1919, the yield was heavy, for the trees had builded and stored well from the stimulus of the 1917 rains. Following this the rains were light, the trees began running down and the 1920 crop was poor. We could trace such conditions back over the full period in which rainfall records were kept, or 35 years. We found in all parts of the state that leaves were dropped in June and July and no preparation made for next year. But we also found that everywhere fall and winter irrigations were practiced crops were uniformly good.

Soil Moisture Necessary

"We must have proper soil moisture, for aeration, working of bacteria, optimum conditions, are dependent upon this factor. How can we determine soil moisture? Do not look for surface signs of need or distress; it is then too late for best results. Even now the wilting point has been reached in some orchards over the state. Trees have been shocked and are adjusting themselves to drought conditions and are becoming dormant, a serious state indeed. Bore down and examine soil; apply water when soil needs it; do not heed the tree or other crop. Orchards are declining through lack of soil moisture when they should be in their prime. Dig and bore and irrigate while the tree is in prime condition. Closely observe moisture content and you will soon be able to judge through experience when soil is within one per cent of the wilting point; then apply water at once. If you cannot determine for yourself call on your farm adviser; he will aid you.

"Profits are made in horticulture, as in all industries, by observation of fine points, the little things, yet soil moisture is 75 per cent of the problem of success. We used to think that if we filled the soil with water that after the root zone was exhausted the lower storage was drawn upon through capillary attraction. We now know that water once down stays down, that movement of water is by gravity only. Scratching the soil for a half inch to kill the weeds is as good as a three inch dust mulch. This may save you from needless cultivation. One pound of humus increases the moisture holding capacity of the soil eight to ten pounds. Pay strict attention to soil conditions and bring back prosperity and that lost \$2,000,000 per year."

HOT

Jim—My pinchers are mad today.

Dick—How is that?

Jim—Why, I left them in front of a fire and they lost their temper.—September Boys' Life.

WRAPPED UP IN ITSELF

Teacher—Who can tell me what a cow's skin is used for?

Sammy—I kin, teacher! It's used to keep the cow's moat in.—September Boys' Life.

Determining Soil Moisture
Assistant Farm Adviser Blanchard at the auger, Prof. J. W. Nelson at right, examining borings.

analyses, etc. Oftentimes the soil is comparatively worthless in spite of the perfection of title. The soil content and condition is all important. Make borings in several places, six feet deep, to determine what you are about to purchase. Find out what the soil is fitted for and plant accordingly. Make no mistake. If you will grow oranges you should find orange soil and not purchase that best adapted to peaches or some other crop. Sixty per cent value only is now received in sections of best orchard practice. Catch up this 40 per cent deficiency by study and experiment.

Soil Survey and Map

"Draw a map of your land on a sheet of paper. Then make borings in many parts and enter upon map what soils are found in various parts, if there is a variance. Natural soil moisture and permeability are important factors, also climate. From a study of these determine what trees or other crops you will plant. Recently a high official of the United States department of agriculture lectured on 'Economics of Agriculture' and stated that important and far reaching changes are to come, based upon the needs or adaptability of the soil. See that trees suited to light soils only are placed in such soils, and do likewise for heavy soils. Grow trees to produce much leaf surface; leaves are the lungs of the trees; without a sufficiency vigorous trees cannot exist more than vigor is possible in a human being with insufficient lungs. Attend farm bureau meetings. Also analyze through frequent visits conditions and practices on the best farms in the neighborhood. Study deeply. Science is 25 per cent of the game; practice 75 per cent.

"Study of soil moisture and moisture movement is imperative. The orchards of California suffered a loss of \$2,000,000 last year in decreased production owing to lack of soil moisture. After eight months investigation throughout the state I find bad soil conditions in all parts and they are worse this season by reason of three continuous

FISK

The Greatest Small Car Tire Value— And Why

THE Fisk Clincher Cord offers the greatest tire value on the market for the small car owner.

To make a good straight-side cord tire and an equally satisfactory clincher cord is a success seldom achieved. The bead on the Fisk Clincher Cord is different from any other bead made. It fits the clincher rim properly and gives to this tire every advantage that the big cord straight-side tire provides.

There is no mileage, no resiliency, no satisfaction to compare with that of the small cord tire when it fits the rim, and the Fisk Clincher Cord does fit.

Next time—BUY FISK

Sold only by Dealers

The State Convention

Director Hecke reports in merest outline some of the good things of the coming state convention beginning at Fresno November 9.

The convention will open on Tuesday morning, November 9, with the usual courtesies, and the opening address by the director of agriculture will review the present status of the agricultural interests and bring out clearly some of the more fundamental considerations which must be taken up at a meeting of this kind. Following this there will be discussions of the present and future problems of cooperative associations in California.

Wednesday, November 10, will be given over to a discussion of standardization of fruits and vegetables and transportation. With markets for agricultural products declining, as they have been recently, the fruit growers face very serious difficulties, and these are only added to by the shortage of cars and other serious transportation problems which must be dealt with intelligently and speedily.

The meeting for Thursday, November 11, will open with a discussion of "Some Important Phases of Crop Statistics" by the agricultural statistician of the newly inaugurated Cali-

fornia Cooperative Crop Reporting Service carried on jointly by the state department of agriculture and the United States bureau of crop estimates.

"Advertising as an Aid to Marketing Products" is a subject of live importance at this time, and we hope to have one of the foremost authorities on this subject in the United States address the convention.

Plant quarantine is doubly important at the present time owing to the large number of pests and diseases not in the state at this time, but which threaten our borders. It is hoped to have one of the recognized American authorities present to speak on effective and efficient quarantine measures.

On Thursday afternoon the program will be given over to matters concerning legislation, at which time the agricultural legislative committee, which was inaugurated at the Fifty-second State Fruit Growers and Farmers' Convention held in Chico last year, will report.

The banquet in the evening will be interesting, and at the same time some important topics will be presented for consideration.

Friday, November 12, will be given

to the discussion of dehydration of fruits and vegetables, and it is evident from the widespread interest taken in this subject by the people of the state as a whole and the inquiries which are constantly being made concerning the efficacy and types of evaporators that many people will attend this session. Simultaneously with this it is hoped to have a meeting of the Certified Seed Potato Growers' Association.

One of the important factors in the promotion of better fruit production and marketing is the group of men comprising the county horticultural commissioners. These men from the various counties of the state will be present throughout the Fruit Growers' and Farmers' Convention and, in addition, will hold a meeting of their own association on Monday and Friday of the same week.

The present program gives promise of no spare moments. Business of vital importance will be discussed and definite policies and plans decided upon. All those interested in the future of California agriculture are urged to arrange their plans to attend the entire convention.

THE PROVERB APPLIED

"I am tired of giving wedding presents," said Jobson.

"Well, returned his cynical companion, "it is better to give than to receive."—Boston Transcript.

THE CURE FOR BLACK ALKALI

By R. R. Snowden

It is well known, as pointed out by Hilgard some years ago, that gypsum reacts with black alkali (sodium carbonate) to form the beneficial calcium carbonate and the relatively harmless sodium sulphate; but another very promising means of its cure appears to have been up to the present entirely overlooked.

Sodium carbonate (black alkali) destroys vegetable matter, appropriating its carbon, under conditions favorable to oxidation, to form with itself the relatively harmless bicarbonate.

The cheapest form of vegetable matter—wheat straw for instance—may be used till sufficient change has been made in the soil to permit the growth of large crops of some kind of vegetation just where needed to complete the reclamation. Wheat straw compared with other materials proposed will be found far the cheapest. One ton of wheat straw theoretically converts 3.68 tons of black alkali into the bicarbonate, while this same amount of reclamation would require 3.4 tons of concentrated sulphuric acid or 6.5 tons of commercial gypsum, which contains about 92 per cent of actual gypsum. Whatever plant foods are contained in the wheat straw will be so much fertilizer added to the soil.

WALNUT CODLING MOTH CONTROL

The same rules and regulations pertaining to the control of the walnut codling moth which were in effect during the past season, except such changes as appear below, will be enforced this season, says an order sent out by G. H. Hecke, director of the state department of agriculture.

It shall be the duty of every person dealing or trafficking in walnuts to furnish a complete report of his transactions each week to the director of agriculture, or his duly authorized agent, on forms provided by the department.

All reports must be complete and executed in a clean, legible manner.

Every person handling walnuts will be listed as a walnut dealer and will be considered as such by the state department of agriculture until due notice has been given of his resignation.

All purchase of walnut meats must be reported the same as whole nuts except that they will be shown in pounds instead of sacks.

All sacks or containers of walnuts must be sterilized at some place approved by the department of agriculture as soon as possible after they are emptied and in no case shall more than one week's supply be allowed to accumulate.

At the beginning of the walnut season all sacks which are to be used for walnuts must be placed in convenient sized bundles and released by a duly authorized inspector before being delivered to any grower or agent. Said inspector will place a tag on each bundle certifying to its immunity from the codling moth and stating the number of sacks contained therein.

Any attempt to move walnut sacks from one place to another without the proper tag is a misdemeanor.

Until further notice all communication with reference to the above rules and regulations will be with the pest control service, State Department of Agriculture, Room 507 Union League Building, Second and Hill Streets, Los Angeles. Telephone, Pico 3621, Station 105.

STATE ACQUIREMENT OF LOGGED-OFF LANDS

The question of what will be done with strictly forest lands in California after the timber has once been logged will be a subject for consideration by the next legislature, according to a recent decision of the state board of forestry. It is pointed out that because of the long time required to bring forest trees to commercial size private interests engaged in logging virgin timber cannot be expected to be interested in the growing of new forests.

To bring new forests to commercial size after the present forests have been removed will require protection from fire and the reforestation of

REO

"How Long Are You From Town?"

It is no longer correct to ask "How far are you from town?" but, "How long are you from town?"

You can easily recall the time when to live five or ten miles from town was to be isolated.

Today the country home twenty-five or thirty miles out is considered "in the suburbs."

Distance doesn't matter—time is all that counts.

The automobile has brought the country nearer the city—it is about one-sixth the distance in terms of time that it used to be.

All but the farm itself—its supplies and its produce. Where horses are still depended upon to carry supplies

to, and to deliver the produce from the farm to market, the distance is as great as ever.

This Reo Speed Wagon does for the farm itself what the automobile did for its owner and his family.

It bridges the last gap between farm and market.

It enables you to get "top o' the market" for your produce—and on the return trip it brings your meats, groceries and other supplies as fresh as they go to the city dweller.

A modern farm is incomplete without a Speed Wagon.

And—you know of course—"If it isn't a Reo it isn't a Speed Wagon."

Sulphur

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards 6 times they will not be affected by MILDW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand and Fleur de Soufre, packed in double

sacks, are the finest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

VENTILATED Sublimed Sulphur—Impalpable Powder, 100% pure, in double sacks, for Dry Dusting and making Paste Sulphurs.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men \$5 per day for making the solution and applying same.

To create additional available plant food and prevent smut in grain, drill into the soil 110 pounds per acre of TORO BRAND SPECIALLY PREPARED AGRICULTURAL SULPHUR—or our DIAMOND "S" BRAND REFINED POWDERED SULPHUR. This soil treatment has increased various crops up to 500%. Send for Circulars No. 6, 7 and 8.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur, Mixtures, etc.

Carried in stock and mixed to order. SAN FRANCISCO SULPHUR CO. 624 California Street, San Francisco, Cal.

We are equipped to make immediate shipments. Send for Price-List and Samples.

Ask us for prices for Carbon Bisulphide, the surest remedy for destroying ground squirrels.

areas that will not reforest themselves. For these reasons the state board of forestry proposes that the state acquire logged-off lands not suited for agriculture and proceed in the business of raising trees. It is proposed that lands that were logged in such a way as to protect the young timber and leave sufficient trees so that new forests will grow more readily shall receive first consideration. There are more than 600,000 acres of logged-off land in California most of which is better suited for growing forest trees than for agricultural purposes.

WALNUT PRICES

(Continued from Cover Page)

that during the war the cost of many foodstuffs advanced from 120 to 300 per cent, while walnuts at their peak only advanced 80 per cent, so it is evident, Mr. Thorpe points out, that the new price of walnuts makes them decidedly reasonable in comparison with the price of any other food commodities.

Consumers of walnuts this year will be glad to know that what California lacks in quantity she will make up in quality, because whenever there are fewer walnuts there are bigger and better walnuts. This is the unwritten law of a light yield, and it is always in the consumer's favor.

This year's crop of California walnuts will amount to about 46,000,000 pounds and will bring the growers from \$10,000,000 to \$12,000,000. The association's by-products factory will recover between \$1,000,000 and \$2,000,000 more from hand sorted walnut meats and charcoal made from walnut shells. This latter economy is wholly in favor of the consumer, since overhead expenses of the business are greatly reduced by the elimination of waste.

The walnut harvest has been in progress for approximately ten days. The nuts are of excellent size and are filled with plump white meats. A great many carloads of new crop walnuts will soon be on their way to eastern markets.

That the California walnut is recognized as a staple food product is indicated by the fact that the consumption has almost trebled in the last six years. The production was 17,800,000 pounds in 1914 while this year it will be at least 46,000,000 pounds. Mr. Thorpe says the universal use of walnuts all the year round is largely the result of the housewife's discovery that walnuts are really a food and that they can be used in the preparation of all sorts of table delicacies and after dinner confections. The slump in sugar prices lately has greatly increased the demand for candies made with walnuts and many housewives are returning to the idea of making their own confections, it is said.

The association reports that its carry over of last year's walnuts, which amounts to less than five per cent of the crop, was due to the combined influence of chaotic market conditions, high priced sugar and foreign competition, and that the small quantity of last year's walnuts on hand is moving in such a satisfactory way that it will doubtless all be out of the way before any new crop walnuts reach the market.

Mr. Thorpe points out that the California walnut industry must soon be given the benefit of an adequate protective tariff if it is to be saved from ruin. Within the past nine months the importation of foreign walnuts, chiefly from Southern Europe and Manchuria, has amounted to more than 50,000 pounds. This is a greater quantity than ever before found entrance to this country in any period of 12 months, and such competition, based upon prices lower in many cases than the actual cost of production in California, is certain to bring disaster to the great walnut industry of California unless an adequate protective tariff be provided without unnecessary delay. He points out that the low plane of living in foreign countries creates in the importation of walnuts to this country an economic problem of such magnitude that the California growers will not be able to withstand it for long.

The **BLASTER** says—
"I use **GIANT**
It gets them out
cleaner"

Professional blasters know explosives. They have tried all the different makes. Many of them say "Giant gets the stumps out cleaner." John Zurr of Santa Rosa, Cal., writes:

"From the beginning of the time I have been using powder for stump blasting and other agricultural work, I have found the powder made by The Giant Powder Co. to be the most satisfactory. Each certain percentage of Giant Powder is exactly what it is represented to be."

Tell your dealer you want the genuine Giant Farm Powders—Giant Stumping or Eureka Stumping. The Giant trademark on every box is your sure protection against imitations.

It will pay you to write today for our book, "Better Farming with Giant Farm Powders." It tells scores of money-saving ways of doing farm jobs—land clearing, ditching, tree planting, etc.

Avocados on the Half Shell

The California Avocado Association held its semi-annual meeting at the Hotel Pasadena, in Pasadena, October 9. There were three marked divisions: fruit exhibit, avocado lunch and after dinner speaking. The autumn meets are not the best for fruit exhibits, the springtime furnishing many more of the large or Guatemalan type, yet the exhibit of avocados was a good one and of other tropical fruits the display was unusually large. One Pasadena introducer of rare plants had the most extensive exhibit of this class of fruits that the writer has seen, all grown within a few miles of Pasadena.

At the luncheon more than 400 sat down to face plates upon each of which lay a half fruit in the shell (or skin); also an avocado cocktail and avocado salad. Afterward were served sliced avocados and crackers, the "makins" of sandwiches of your own construction, and this was followed by a hot dish of scalloped avocado and other good things to eat, finished by avocado ice cream. Inasmuch as the diners filled completely two large rooms, the management was forced to provide other quarters for the audience, which was done by repairing to the convention hall across the street where was heard

The Speaking

President Wm. H. Salmon made a short official address and some necessary announcements, after which he

introduced Prof. F. L. Griffin, associate professor of agricultural education, Berkeley, who made a strong plea for better financial support for the state university, saying that at present the citrus and avocado course of instruction was suspended for lack of funds to procure qualified instructors. The three speakers following were assigned avocado subjects and a synopsis of their remarks will appear in a later issue. They were: Ernest Branton of the Cultivator staff, "Thirty Years Observation of Tropical Fruits"; D. W. Coolidge of Pasadena, "Seven Truths About Avocados," and R. W. Hodgson, Los Angeles County farm adviser, "Avocados as a Commercial Industry."

Throughout the day the secretary was busy registering new members. The greatest jollity prevailed, "and all went merry as a marriage bell." The place and date of the regular annual convention will be announced later, for with past and present growth of membership and number of diners the executive committee know not where to find suitable quarters for what is certain to be the largest assemblage of avocado advocates ever known.—E. B.

The California Tractor and Implement Association is planning a survey of conditions under which women work on California ranches to determine how power on the farm may help.

INTERNATIONAL FARM CONGRESS

The fifteenth annual session of the International Farm Congress will be held at Kansas City, Missouri, December 9-11. Among the subjects up for consideration are:

Marketing: Cooperative associations, crop pools, warehousing and determination of prices. Development of domestic and foreign markets. Relation of cooperative selling associations to consumers leagues.

Production: A continuation of the studies relative to adequate and better balanced production of all farm products and livestock.

Tariff Protection: Protection of American agriculture from competition of cheap labor and cheap land in other countries by the erection of an adequate tariff wall.

Transportation: More efficient railroad service. Development of the navigable waterways. Building and maintenance of roads.

Immigration: With relation to its effect upon farm labor, and the ownership and operation of farm lands.

Legislation: Proposed laws affecting agriculture.

Reclamation: Development of arid, semi-arid and swamp lands. Flood protection by drainage, and by storage of storm waters for irrigation.

Education and Farm Home Life: Reports, discussions and constructive action.

Farm Organizations: What they have accomplished and what they may be expected to accomplish.

RICE EXPERIMENT STATION

The rice grower is up against a serious situation. The season has not been as satisfactory as the former one and present indications are for exceptionally low prices with slow demand. This has caused many a grower to look at the serious side of the production and marketing situation, and some have maintained that the activities of the federal department through its station in Butte County have not been directed so as to secure their best interests. This has caused the members of the chamber of commerce at Chico to make investigation as to the situation and at a recent meeting of the board of directors the following resolution was passed:

"Whereas, reports are being given circulation in the press of this valley and state to the effect that the rice experiment station of the federal department of agriculture, located between Biggs and Richvale in Butte county, is failing to make itself useful to the rice growers of this valley, and, whereas, we believe that this station has performed its functions in a creditable manner; be it resolved, that the directors of the Chico chamber of commerce do hereby give public expression to their appreciation of the work of this station as a whole, knowing that the work of the station in the isolation, multiplication and distribution of rice varieties and determining the amount of water and proper seasonable distribution required for effective rice irrigation under Sacramento Valley conditions, in the demonstration of methods for the elimination of weeds, and the experimental demonstration of the unfitness of many types of rice for cultivation in this valley, have been of great value to the rice industry of the Sacramento valley and to the numerous individual rice growers who have seen fit to profit by this work."

UNIVERSITY TO HOLD FRUIT SHOW

The division of pomology of the University of California, in cooperation with the newly organized Pomology Round Table, an organization that existed at the university before the period of the war, has planned a fruit show that will be held at Berkeley on November 18, 19 and 20. The show will be educational for the students as well as for the many alumni that will be on the campus during the big game with Stanford on the 20th.

Growers are asked to send specimens of fruit to compete for awards. Since it is primarily an educational enterprise on the part of the students no cash awards can be offered. Ribbons, however, will be given to the first, second and third places of each variety and class. The fruit will be displayed with the variety, name and address of the grower attached. The judging will be done by a student committee.

SORGHUM SYRUP

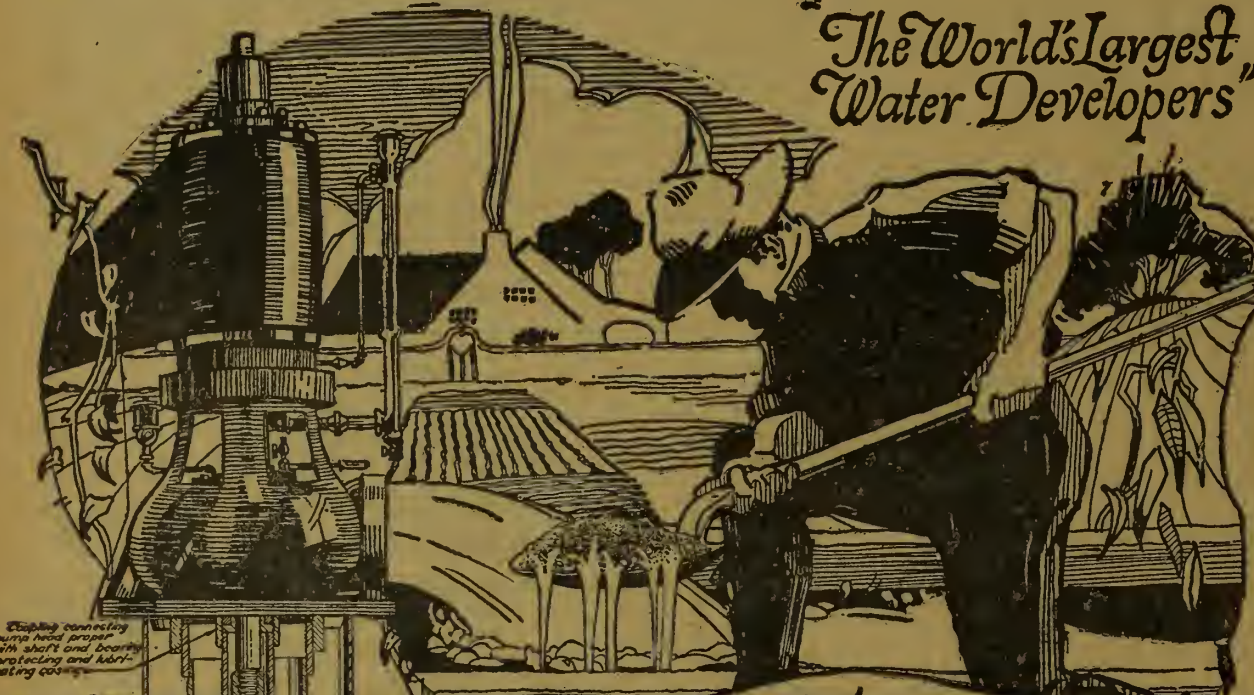

At a recent Fresno fair the Hughson Sorghum Syrup Company made demonstration to the satisfaction of many an inquirer as to the high quality of California "sorghum." This company is producing a very high quality of syrup and thinks it largely due to soil conditions of Stanislaus county. The Hughson mill has capacity of about 25,000 gallons.

PRUNING MATURE ORANGE TREES

(Continued from Page 505.)

and the yield drops off. They have passed their prime and are on the down grade. Perhaps reheading at this time will remedy this condition.

Trees propagated from fruit wood buds behave quite differently. They grow more slowly and consequently are stronger in structure. They are precocious, sometimes blooming and they frequently bear a very respectable crop. How long they will con-

tinue to bear satisfactory crops of good fruit we do not know. We have not had enough experience as yet. There are trees of this sort 40 years old and better, still bearing fine crops and in good health.

There is some variation in the behavior of trees propagated from intermediate types of growth. Some consider the shade tree lemon as an intermediate type which has largely lost the bearing habit.

An extremely important fact related to the pruning is that trees composed of fruit wood require very much less pruning than trees propagated from vegetative sorts. It is my opinion that our citrus pruning problem will be largely solved when orchards are set out of trees propagated from the best selected fruit buds only and when all our present inferior and off-type trees have been top worked to better sorts.

The answer to the question of what kinds of growth one should use has been at least indicated in the discussion of the behavior of the different sorts. Fruit wood alone, where possible, and intermediate or vegetative sorts only where necessary to fill in openings or to fill out trees which have suffered accidents.

Practices to Avoid

Much has been said recently by Mr. Shamel and others regarding injury following severe pruning of citrus trees. I believe this statement should be qualified to read "normal citrus trees." Severe pruning of healthy normal citrus trees is clearly inadvisable for at least two reasons. In the first place, the bearing area is materially reduced and trees cannot reasonably be expected to carry normal crops until this deficiency has been made up. In the second place, the leaves are the laboratories where plant foods are elaborated and a material reduction in leaf area acts precisely like starvation. In fact, it is easier to starve a citrus tree to death through severe pruning than it is to accomplish the same result by withholding fertilizer.

There are marked differences in tissue efficiency in citrus trees. I have seen numerous cases where citrus trees received rather severe pruning and with most excellent results. The pruning was confined however to the removal of inefficient tissues, including vigorous sucker wood and old growth showing evidences of deterioration. Severe pruning of normal citrus trees however is to be avoided at all times.

Heading back or "stubbing" is a practice which should be discontinued as decidedly wasteful. It disturbs the balance of the tree with the result that its energies are expended in length growth of an undesirable nature and to an unnecessary degree. Where branches are too long they should be shortened in by cutting to well established laterals. This will not cause the tree to throw out a mass of wild sucker growth which must later be cut off. Heading back is a practice now being abandoned by deciduous fruit growers in favor of the new "long" system of pruning. In my opinion it is even worse with citrus than is the case with deciduous trees. Once adopted it must constantly be followed or the trees get out of condition. It is wasteful of the energies of the tree and expensive to keep up and should be abandoned.

Bearing in mind the fact that our orchards are made up of trees of many different strains, of trees propagated from different types of growth and carrying tissues of widely different efficiencies, it is obvious that any mechanical system of pruning cannot be satisfactory. And yet that is exactly what is being done universally by growers as well as by investigators. Until we have our orchards composed of uniform trees no such method can be expected to give results worth serious consideration. Each tree presents its own problem. Perhaps the first tree in the row chanced to be propagated from fruit wood from a high yielding strain. All the pruning it requires is a little thinning out to permit the entrance of light. The very next tree may be of a kind of growth that demands frequent and even vigorous pruning. To prune both moderately does neither justice. The one is thrown out of equilibrium and encouraged to sucker growth; the other is not curbed enough. It can thus be seen that citrus pruning comes down to an individual tree problem and requires more knowledge and skill than the pruning of perhaps any other fruit tree.

Citrus pruning in a nutshell consists in the use of trees propagated from the best selected buds only; second, the rigorous exclusion of all undesirable types of growth; and third, a judicious thinning of the outer canopy of foliage so as to encourage interior fruit bearing.

California Cattlemen's Convention

By Ernest Brauntton

In connection with the Livestock Show at Exposition Park, Los Angeles, the California Cattlemen's Association held a get-together meeting on October 7, O. B. Fuller presiding. Sylvester L. Weaver, vice-president Los Angeles Chamber of Commerce welcomed the assembly on behalf of that organization and urged closer and more extensive organization among the varied cattle interests. In illustrating the strength of organization he told of a guard at an insane asylum building a roadway with a half dozen husky patients. Upon being asked if he was not afraid they would get together and overpower him, he replied: "Don't worry, if they could get together they wouldn't be here." He told of the confidence that comes with growing numbers: "A man who had a successful bank was asked how he attained success. Said he just hired a room, hung out

a big sign 'Bank' and waited. Person after person came and deposited a hundred or two at a time until finally, he said: "They showed such confidence in it that after a while I put in a couple of hundred myself."

Clinton E. Miller then welcomed the delegates on behalf of President Murphy and the directors of the Livestock Show. He was followed by Francis M. Cuttle of Riverside in an address on forestry and reforestation, urging cattlemen to aid in the work. He said we were growing but 12 cubic feet per acre of lumber per annum and consuming 42 cubic feet. Also that through wasteful methods we recovered but 320 board feet out of every 1,000 board feet cut down. He told how through deforestation floods in China had washed down mud from now bare hills until it covered hundreds of square miles of valuable valley lands, that now the Chinese are carrying back the soil to the hills,

building little dams across tiny ravines and planting trees in the deposited soil. This work is going on under supervision of Americans. Stockmen are vitally interested in conservation of water for government reports state it requires 15 to 30 tons of water to grow a pound of beef and that 430 tons of water are used in growing one ton of alfalfa.

H. A. Jastro of Bakersfield, introduced ("if introduction is necessary") as the father of the livestock industry in California, made a strong plea for closer cooperation and coordination on the part of all. He said Mr. Weaver had referred to the industry as the third in size in the state. Mr. Jastro said he presumed the two first were the auto and movie industries, as the livestock industry was of first importance, which statement elicited much laughter and applause. He further said he was very optimistic over the future of California for after traveling through the other states and over much of the world he was convinced that California was the only state that could build a fence around itself and "watch the rest of the world go by." Its soil produces everything

needed by man to eat, to wear, to use. He closed with a fervent appeal to all cattlemen to join the association.

Judge Canfield of Santa Barbara was the next speaker and outlined a plan for the establishment of county sales agencies, a plan warmly commended by the chairman and President Bixby. H. L. Musser and Professor P. B. Kennedy then gave very interesting talks on forage grasses, illustrated with living specimens of a dozen or more species, provided by Mr. Musser. We hope to give the subject matter of these talks in a separate article. The last on the program was a vigorous, stirring address by President Fred H. Bixby, who gets down to "grass roots" in all his talks. He said Melilotus alba, sweet clover or white melilot, is the best plant to bring back depleted soils of any he has grown. He has 1,200 acres of it. On sugar beet lands that had dropped to a yield of six tons to the acre after sweet clover had been grown and turned under, the yield jumped to 20 tons an acre. He said steers turned into it grew fat and the plants were so high the steers were lost in it, being more than six feet high. He advocated cutting it once a month, no matter what the growth made. He also asked for more dehorning, saying that of 14 carloads of steers shipped to Portland, the trip being supervised by himself, the cattle in cars where all were dehorned gained eight pounds each, while those horned, in cars by themselves, lost 56 pounds each.

HUDSON
SUPER
SIX

The Exclusive Super-Six Motor Gives This Advantage

*From Men Who Do Not Own Hudsons
Comes An Interesting Expression
on Super-Six Performance*

Many men who covet its abilities learned to admire Hudson from the viewpoint of the "man in the other car." Perhaps you, too, have noted the characteristic all Hudsons reveal when fast going without exceeding the speed limits, is a factor.

Alertness and immediate response to the throttle accounts for the way Hudsons take advantage of every driving opportunity. There is no motor labor.

When Driver and Car Act as One

You frequently hear Hudson owners speak of the way their cars answer as though they were a part of their own impulse. Never a sense of the mechanical. All feeling that there is a motor and complicated mechanism is absent.

No wonder Hudson owners are so partial to their cars. And no wonder other motorists are forced to recognize the Hudson quality.

Pride of ownership to many means beauty of line and the qualities that excite admiration while the car is inactive. In those particulars the Super-Six in every type of design meets every wish. But it is pride of performance

that excites the greatest praise for Hudson—whether it be in establishing world records for speed, acceleration and mountain climbing, or in the constant uninterrupted and therefore economical operation required in private service.

Yet Hudson's supremacy means no added complications, weight or size. It results from an exclusive Hudson invention, which added 72% to the power of motors of its size, and increased efficiency by 80%.

A Leadership That Has Stood For Five Years

For five years that invention has kept Hudson foremost in performance. And since its discovery and adoption Hudson has always been the largest selling fine car in the world.

The unrelenting study, experiment and development of years has made the present Hudson a finer car in many ways than those earlier Super-Sixes. No rival challenges its supremacy by official proof.

You will best assure delivery when you want it by speaking for your Hudson promptly.

Hudson Motor Car Company, Detroit, Michigan

(4016)

PRICES NAMED ON LIMAS

The California Lima Bean Growers Association has named prices on the 1920 crop and issues the following statement:

The California Lima Bean Growers Association today commenced to quote its Seaside grade of new crop limas and baby limas for the ensuing 20 days' shipment, on the basis of 8 cents per pound f. o. b. for limas and 7½ cents per pound for baby limas, regular choice recleaned grade one-fourth cent lower.

These are very low prices and are away below the average, actual cost of production, particularly upon regular limas which are showing less than half a normal crop yield for the second succeeding season, due to shortage in rainfall the past year.

Because the wholesale grocery trade of the country, who are the chief distributors of beans and all other food products, have had their finances and credit standing placed under a severe strain through recent heavy declines in sugar, coffee and rice, also some lines of canned goods, they are much depressed, professing to believe that prices are lowering or about to lower upon all commodities, and they are refusing to buy any new goods, excepting in very small quantities. Even though their present state of mind may be unwarranted, the Lima Bean Growers Association recognizes that it must have the wholesale and jobbing outlet, and felt the naming of low first prices to be necessary to secure the interest and confidence of this trade in our commodity, and that this should insure a firm and reasonably advancing market. Such a consummation would please the trade, would give the consuming public good quality limas and baby limas cheap, and, to the extent of the advance, reduce the heavy loss to the growers.

The future of the lima bean market depends very largely upon whether the growers insist upon forcing the sale of their crops regardless of buying demand or of price obtainable when offered for sale.

BEETS AND TOMATOES

Throughout the Compton district of Los Angeles County the sugar beet crop is good and the harvest is in full swing. On the ranch of F. L. Walton two fields will yield 12 and 14 tons, to the acre. The owner plows the beets out and they are topped, piled and loaded by crews paid according to a printed scale based on the tonnage yield. Thus a 12 ton crop pays the harvesters \$1.30 a ton while a ten ton crop pays \$1.50. In the whole Compton district the yield is at least 25 per cent better than last year's, this district being always depended on to raise the average yield of beet lands.

Mr. Walton also has 35 acres in tomatoes that as a whole make a fine appearance. An unrecognized trouble

RHUBARB---Wagner's Giant Plant Now

September, October and November are the best Fall months to plant.

Growers who planted last July and August have already harvested over 15 tons per acre netting \$1000 eleven months from planting. For further information, write J. B. Wagner, Rhubarb Specialist, 1550 East Villa St., Pasadena, Cal.

The advertisers in the California Cultivator are known to be reliable and we recommend them to our many subscribers.

is taking some of the largest and best plants in full bearing. Still, the estimated yield is ten tons to the acre throughout the field. The San Jose Canner will run about 11 tons, perhaps more, while the Stone will yield two to three tons less. A "Sacramento Canner" was introduced this year and was claimed to be superior to the San Jose but up to date gives no superior promise. These tomatoes were planted in May on high ridges eight feet apart and six feet apart on the ridges. The aim is to get the latter as high as possible, and they are at present 12 to 18 inches above the irrigation furrows. The land is strongly alkaline, soil very retentive of moisture and capillarity strong. So the vines must be kept as high as possible. For three years Mr. Walton has received \$20 a ton for his crop and this year is paying \$4 a ton for picking. Melilotus alba, the sweet clover, is one to two feet high on the better soil and one heavy crop has been cut and fed to stock. At the lower end of field, where the alkali content is greater, however, no Melilotus will grow. Another tomato grower in the district said his best crops came from land sown early to barley and the barley turned under when soft and succulent, about 18 inches high. Tomatoes planted soon after yielded an unusually large crop of fine fruits.

SUPERIOR QUALITIES OF PERUVIAN ALFALFA

Peruvian alfalfa has decided advantages over other varieties for those sections of the United States where it will grow, say forage experts of the United States department of agriculture. This should be taken as applying to the true or hairy Peruvian alfalfa and not to the so-called smooth leaved Peruvian. This latter name the specialists regard as unfortunate, as it leads to confusion in the seed trade. The "smooth Peruvian" is hardly distinguishable from common alfalfa.

The principal advantages of Peruvian as compared with common alfalfa are its more rapid growth, quick recovery after cutting, and ability to grow in cooler weather, thus furnishing more pasturage during the winter and in late fall and early spring.

The territory in which common alfalfa could be profitably replaced by Peruvian includes a comparatively narrow strip down the Pacific Coast and along the Mexican border and the Gulf, thence up the Atlantic Coast to the vicinity of Charleston, S. C. It cannot be grown to advantage where the winter temperature falls below ten degrees.

This alfalfa was first introduced into this country by the United States department of agriculture in 1899. The earliest introductions were not perpetuated, however, and it was not until 1903 that considerable efforts were made to produce a supply of seed.

WATER HOLES OF THE DESERT

The United States geological survey reports that the movement for the protection of prospectors and travelers on the arid desert plains of this country was begun many years ago by George W. Parsons, a prospector and desert expert of Los Angeles. In 1901 Mr. Parsons made a trip across the desert region of California with Professor W. L. Watts, state mineralogist, and on his return urged upon the Los Angeles chamber of commerce the necessity of placing guide posts and of developing water holes in the desert.

Mr. Parsons' work led to an appropriation by congress, as a result of which the United States geological survey, department of the interior, in cooperation with the department of engineering of California, surveyed the Southern California desert and has recently issued a report entitled "Routes to Desert Watering Places in the Salton Sea Region, California," by John S. Brown.

This report may be secured by writing for Water Supply Paper 490 of the U. S. Geological Survey, Washington, D. C.

AND CAME TO STAY

"I believe," said the cheery philosopher, "that for every single thing you give away two come back to you."

"That's my experience," agreed Phamley. "Last March I gave away my daughter and she and her husband came back in May."—Boston Transcript.

The most efficient Tractor in America

Bates Steel Mule Excels at Orchard Work

THE unusual adaptability of the BATES STEEL MULE makes it the Ideal Tractor for Orchard Work.

Its design is narrow and low allowing the soil to be disced close up to the trees without injury to the low hanging branches.

The flexible construction of the BATES STEEL MULE allows it to ride smoothly over the roughest places without injury and the twenty-four cleats constantly gripping the ground, guarantee perfect traction under all conditions.

The front wheels make easy steering and comfortable riding. Bates Crawler Shoes have hardened steel parts and are 100% oversize—that's why they last for years.

When Writing Advertisers Mention California Cultivator

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Cottony Cushion Scale

Am sending an insect which increases with great rapidity. What is it and how can I control it?—Subscriber, Stockton.

This is a healthy specimen of cottony cushion scale, rather we should say, these, for there have apparently been hundreds of them hatched in transit, as the box was filled with youngsters. This cottony cushion scale, Icerya purchasi, at one time threatened the destruction of California orchards. They were saved, however, by the introduction of a natural enemy, which at that time we called Vedalia cardinalis. We believe this name has been changed, but that is not so important as the fact that the beneficial insect succeeded in practically eradicating the white scale pest. We say practically, for the eradication was not complete and once in a great while a grower, as does our inquirer, finds an infestation. Would suggest that the subscriber who has this infestation write Harry S. Smith, California State Insectary, Department of Agriculture, Sacramento and explain the situation. We think that he may be able to supply a colony of the vedalia. However, if the infestation is not serious fumigation or even one of the similar emulsion sprays will be sufficient to control it.

Nurseryman's License

What is required under our present state laws of a man, not a registered nurseryman, to sell his production of plants, trees and vines?—Subscriber, Springfield.

The state law requires: "Any nursery, agent, jobber, person, firm or organization operating in the state of California, who ships, sells or handles nursery stock, trees, plantings, shrubs or vines which are for planting or propagation purposes, within the border of the state, shall register with the state commissioner of horticulture and shall pay the same \$1 for such registration for a period of one year."

Write to Geo. H. Hecke, Director of Agriculture, Sacramento, for full information.

Weakling Rabbits

What ails my little rabbits? After they are big enough to walk out of their nest I find them dead in the pens. We feed the does green and dry alfalfa and barley, give fresh water twice a day, keep hutches clean. We breed does when little ones are six weeks old.—Subscriber.

The rabbits in question are nothing but babies and must be so treated in care and feed. They cannot eat green feed freely or heavy, coarse, fibrous grains and hay and digest the food their stomachs are not yet fitted for. If mother doe has the right kind of nourishing food and plenty of nurse they will obtain their food at the proper place and not eat other foods till

nature has prepared them for it. Take doe and rub hand over nipples, eight in number, and examine veins or milk ducts that connect them and see if they are full and plump. Some does never make good mothers in this respect. Good mothers must be selected and are worth the highest prices. Would advise letting does rest two weeks between bearing of young and breeding; it pays in the long run. Feed your green in rack up high so small stock cannot reach it. Sprinkle fine leaves of dry alfalfa where young can get it (in clean place). Feed plenty of nourishing food to doe before kindling and after, and if parent stock is strong and healthy your troubles will soon cease in this respect.—W. D. W.

Bagging Grapes

The grower of a small quantity of table grapes recently wrote in, asking as to advisability of bagging grapes, this primarily to prevent depredations of birds.

Bagging of grapes is not practiced in California. Some growers near large Eastern markets have followed the practice of using ordinary Manila grocer's bags, tying over the bunches in order to protect from the birds and, in addition, to extend the season. Where grapes are easily grown and are cheap the practice would not pay, although the cost in old days is reported to be only about one cent per pound. The season with Catawbas was not extended at all while with Delaware grapes an extension of 40 days was possible. The coloring of some grapes is also increased, but with others, "especially Catawbas, was not so high."

Keeping Cut Dahlias

Please let me know how best to keep cut dahlias for five or six days.—Subscriber, Ceres.

There is no way of keeping dahlias for such time except where general conditions are favorable. They are best picked late at night or very early in the morning. Two methods of treatment are used, with about equal results. One is to scorch the ends over a fire and the other is to dip ends of stems in boiling water for just a few seconds. The latter seems to find most favor with growers. Plenty of fresh water and pure air are also essential. If used in the house place flowers in deep fresh water each night and keep outdoors or where air is pure and cool. There will always be found great variance in the keeping qualities of the different varieties.—E. B.

Non-ripening Himalayas

I have a number of Himalaya blackberry vines on which the fruits do not ripen, though a heavy crop now hangs on. The soil is sandy loam. We irrigate them two or three times a week. Would too much water prevent them from ripening?—Subscriber, Highlands.

Too much water would doubtless prove a deterrent to ripening or even proper development. The berry crop is a climax to the growing season; if soil is overcharged with water such climax may never come. Doubtless you have given the plants about four times as much water as they need, though there may be other contributing causes to non-ripening. Would water far less in future, but mulch with stable manure.—E. B.

Budding Stock

What roots are best for budding to peaches, apricots, almonds and walnuts, and when do you plant seeds? Can I hire a budder and successfully grow my own nursery stock?—Subscriber, Denair.

Peach stock will do for peaches, apricots, and almonds. It is better to secure the pits as soon as available, from canneries or other sources. Place them in shallow boxes of sand. In the spring, about March, pits will sprout. Run light furrows for nursery rows, place sprouted pits therein and cover about two inches deep. Walnuts should be grafted on the "Northern" Black, native to North Central California. You may hire a budder and successfully grow your own stock, but unless you thoroughly understand the work and need a large amount of trees we would advise buying them from a commercial grower.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Separate—Community Property

I purchased a farm, partly with money acquired before marriage and partly with funds accumulated after marriage. The deed is in my name. My wife refuses to live on the farm and says that she will sign the deed only in case I give her her part of the farm. The farm has doubled in value since purchase. Could I sell the farm without her signature, and if not, what would be her proportion?—Subscriber, Fallbrook.

The portion of the purchase money which was acquired by you prior to your marriage is, of course, separate property, and that acquired after marriage, community property. The farm being in your name there is a certain presumption that it is separate property. However that may be, even if it is community property, under the law as it stands at present, where the record title to the community property is held by the husband, he may convey it and such conveyance shall be presumed to be valid as to any purchaser or incumbrancer in good faith without knowledge of the marriage relation. In any event, such conveyance is conclusively presumed to be valid at the expiration of one year from the filing

Lee Union-Alls

The most popular work and play garment in America.

The millions of Americans who are wearing LEE UNION-ALLS insist on the trade-mark not merely because of the great comfort and convenience of these nationally famous garments but because they reduce substantially the high cost of living.

"Just Like Dad's!"

of such instrument in the recorder's office. The interest of the wife in community property is a sort of inchoate interest, which is held in abeyance during the marriage relation and comes into effect rather upon the termination of the marriage relation than otherwise. It is exceedingly difficult to ascertain just what her interest would be, but if the deed is made at the present time it would doubtless be effective.

Undivided Estate

Three years ago a farm was left equally to four sisters. Two of the sisters desire to dispose of their interest. The other two refuse either to sell or buy and pay no attention to the requests of the two desiring to sell. Is there any way to force this sale?—Subscriber, Mountain View.

The four heirs are doubtless tenants in common of the property and each owns an undivided one-fourth interest in the whole property and action may be brought by one or more of the sisters for a partition of the property, accord-

ing to the respective rights of the persons interested and for the sale of such property or part thereof, if it appears that a partition cannot be made without great prejudice. In action of partition the court may order sale of the whole of the property, if it is found that for any reason it is not susceptible of equal division, and thereupon the proceeds of such sale may be divided among the parties according to their interests. Each of the sisters is the owner of an undivided interest, but the usual purchaser does not care to make such purchase and the undivided interest would doubtless be sold at a price far lower than its true value.

Veterinary

Sore on Shoulder

Horse has had sore on shoulder for five months which refuses to heal. What treatment should be given?—Subscriber, S. Yoshinaga.

It may be necessary to give your horse a rest for a time as shoulder galls of this kind which have been running for some time are often rather difficult to heal. One of the best treatments I would suggest is white lotion. This can be made up as follows: Lead acetate 1 ounce, zinc sulphate ½ ounce, water 1 quart. The affected parts should be bathed with this solution two or three times a day. Another remedy which often produces good results is made up of 1 part powdered lead acetate, 1 part powdered alum, and 2 parts powdered sulphur. This can be dusted on the affected parts after they have been thoroughly cleaned. The white lotion will probably give the better results and a rest should also be given in order to allow this sore to heal.—G. E. G.

Possibly Ringworm

Having read of others troubles that they have brought you I am writing to see if you cannot help me in mine. We have a pig about four months old that has a swelling on his left hip. It is a regular mushroom sort of a sore which sometimes is bloody and at other times has a crust on it. We thought at first that another pig had hit it or possibly it had been hurt on a nail, but we failed to find one around. Was told that it was a ringworm, but anything we do for it does not seem to help. Pig eats well and has grown right along, but has not made nearly the growth that the other one has on the same feed. We have fed them sour bran and barley with cooked vegetables with water and Lactein. Is the trouble in the feed, do you think? Have put iodine, coal oil and Spratt's Disinfectant on it, but nothing seems to help it at all. Do you think we should separate that one from the others? Could it be something that the other ones could catch? We are finding lots of good pointers in the Cultivator since we subscribed for it and hope you can tell us what to do for our pig.—Subscriber.

This trouble is rather difficult to diagnose. However, ringworm seems to be a possibility. Ringworm is contagious and the affected animal should be kept in a pen by itself so that it will not infect the other animals. This trouble is caused by a vegetable parasite which develops and grows rather rapidly. It is often found around the head and neck or around the back quarters, especially on the hips or hams. Perhaps the best treatment would be to first remove the crusts or scabs by washing with warm water in which an ounce of carbonate of potassium has been added for each quart of water. A brush can best be used for this purpose. The affected parts should then be treated as follows: Apply ointment of 2 teaspoons iodine mixed with 4 teaspoons vaseline. This should be rubbed on with a gloved hand, as human beings may be infected with this trouble. This can be repeated about every three days. Another treatment which is very effective is made up of carbolic acid 1 ounce and alcohol 2 ounces. This can be applied to the affected parts with a feather or small brush, usually once or twice being sufficient.—G. E. G.

BOSTROM IMPROVED

Shipping weight 15 lbs. Price \$22.50 Has TELESCOPE with magnifying glasses which enable you to see cross on Target quarter of a mile. Pays for itself on the first job of IRRIGATING, DITCHING, TILE DRAINING, TERRACING, etc.

Best investment any land owner ever made with Twenty-Two Dollars and Fifty Cents. Simple, accurate, durable and complete with full instructions. Used and endorsed by Agricultural Schools, County Demonstration Agents, and farmers from Atlantic to Pacific, and you will endorse it too, after using it—if not your money back.

BOSTROM-BRADY MANUFACTURING CO. 89 Stonewall Street, ATLANTA, GA.

JOHNSTON TURBINE CENTRIFUGAL PUMPS

Installations can be made in wells 16 inch or larger. Produce 300 to 4,000 gallons per minute. Ask for Folder No. 4. American Well & Prospecting Co., 407 E. 3rd, Los Angeles.

Working Capacity

The "Caterpillar" Tractor is more often purchased on the basis of its actual working capacity than on mere horsepower ratings. It is for that reason that it is so generally chosen in preference to other tractors of higher nominal rating. Big working capacity is the result of a liberal surplus of power over its rating, minimum transmission losses, non-slipping track, trouble-free performance.

The Holt Manufacturing Company Stockton, Calif., Peoria, Ill., Los Angeles, Calif., Spokane, Wash., San Francisco, Calif.

COMBINATION

Pre-Breeding Season Sale Poland Chinas

Sale to be held on Wednesday, October 27th, at LOOKINGBILL & VELZY'S UNION STOCK AND SALES YARDS, POMONA.

40 head of useful breeding stock from the well known herds of E. Avery Newton, Lankershim, and H. Christlansen, Arlington, will be catalogued for this occasion, and papers for every animal sold.

This sale is to be known distinctly as "a pre-breeding season sale." With three or four exceptions these sows and gilts are purposely sold open, that new owners may mate them in November to their own boars for March litters.

First Prize and Grand Champion Blood

Three crack herd boars, also a few young boars of early spring farrow, to be found in these offerings.

THE LIVESTOCK SHOW IN THE SOUTH

(Continued from Page 503.)

the equal of any show ever held in the West. The Guernsey show was a close second in point of quality and the Jersey and Ayrshire breeders came in the order named. The dairy division was considerably stronger than that seen at the recent state fair. The dairy cow seems to fit into the scheme of things down South to better advantage than any other type of livestock, and with the many high class herds already established and the wide interest that is being manifested in Southern California, it can be predicted that that section will become one of the most important dairy centers of the United States.

The Los Angeles County farm bureau had an extensive exhibit detailing their various activities. The event was taken advantage of to put forward the work of the cow testing associations and, by means of selected animals, the records of which were known, the value of testing and the futility of selecting cows on any other basis than that established by the Babcock test and scales was demonstrated. Six cows were used and each day a demonstration was held by Assistant Farm Adviser Gordon, in which the crowds were asked to pick the high producing cows. The production records ranged from around 300 pounds of fat to above 700 pounds.

The California Dairy Council maintained a booth where the food value of dairy products was demonstrated and milk drinks dispensed.

Much of the success of the dairy cattle exhibit was due to the efficient work of G. W. Brown, the superintendent. The judging was done by Professor H. H. Kildee of the Iowa state agricultural college and Geo. E. Platt of Los Angeles.

THE HOLSTEIN SHOW

By C. L. Hughes

Records show that during the past four years Southern California breeders have bought over \$250,000 worth of registered Holsteins in public sales in California. Add to this the \$41,000 paid for King Korndyke Pontiac in the St. Paul sale by Anita M. Baldwin, and some of the large private transactions, and it is a safe estimate to place Southern California Holstein purchases at half a million dollars during the four years just passed.

The presence of this splendid Holstein blood in Southern herds has already made itself felt in the official production lists of California, and at the 1920 Los Angeles Livestock Show presented what was in many respects the greatest Holstein show yet seen in California.

In a show which abounded in features, the exhibit of James J. Jeffries, Burbank, commanded attention as one of outstanding merit. Reference to some of his individual entries will be made later on, but it may be noted here that the strength of the showing made by this herd is due to the get of Mr. Jeffries' great herd sire, King Segis Pontiac Jannek.

Another exhibit that deserves praise of high order was that of California George Jr. Republic, Chino, whose small herd furnished some of the highest award winners and were dangerous contenders in every class in which they showed.

Santa Anita Rancho, Santa Anita, showed much the same herd as was shown at Sacramento, winning a liberal number of top places and losing a number of hair line decisions for first place.

Burr Farm, Los Angeles, were strong contenders in every class and were liberal winners as the list of awards shows.

Rosamaines Rancho, A. J. Stalder, Riverside, showed a splendid herd that won a liberal number of places in the money.

Special mention should be made of the few head shown by E. R. Stalder, Nuevo, who has only a small herd, yet managed to reach top place and close to the top in several hotly contested classes.

F. F. Pellissier, Whittier, E. D. Barry Jr., Daggett, Los Angeles County Farm, Hondo, and Frank Reed Sanders, Mesa, Arizona, with only a few entries, added to the strength of the show and furnished some first prize winners.

It was strictly a Southern California show, one of which the entire state may well be proud, and there were a lot of really high class individuals in several of the big classes that couldn't find room to get inside the five money places.

The class of aged bulls brought out four entries, and the state fair grand champion was forced into second place by the splendid Dichter Spofford Korndyke Lad 5th, shown by California George Jr., Republic, who was later made senior and grand champion. This is a very flashy bull, just now entering mature form, and holds great promise for the next few years. The Stalder entry, King Pontiac Netherland Segis 3d, went to third place above Burr Farm's King Korndyke Pontiac 20th, who is getting rather too heavy service to keep in the pink of show condition.

In the two year old class A. J. Stalder scored a win with Rosamaines Pontiac Ormsby, a son of Sir Skylark Ormsby Hengerveld, a well turned bull that was later made reserve senior champion. Second place went to Barry's Sir Aaggie Hiske Walker, and third to Burr Farm's Sir Manuel Korndyke.

The senior yearling bull class brought out only two entries, the winner, however, being fully capable of successfully contending in a much larger company of good ones. This winner was King Hengerveld Alcartra Prilly, a son of Bridgford three times grand champion, King Segis Alcartra Prilly, shown by F. F. Pellissier, Whittier. This bull was later made reserve junior champion.

The junior yearlings were rather handily headed by the better balanced bull King Korndyke Pontiac Acme, more popularly known as the \$41,000 bull shown by Anita M. Baldwin. He was later made junior champion and reserve grand champion. Second place went to the Jeffries entry, K. S. P. J. Count, who was closely pressed for the place by Stalder's Sir Ormsby Skylark Rauwerd, with the Los Angeles County Farm entry in fourth place.

A good class of senior bull calves was finally headed by the Sanders entry, a son of it out of Orndyke Duchess Korndyke, with E. R. Stalder in second place with a son of the reserve senior champion. Third and fifth places went to the Santa Anita entries, with A. J. Stalder in fourth place.

An excellent class of junior bull calves uncovered an outstanding winner in the E. R. Stalder entry, a calf that had no advantage in age over his nearest rivals but had a big margin on size. This calf was also sired by the reserve senior champion. Jeffries' entries took second and third places handily, with the A. J. Stalder entry fourth, and California George Jr. Republic in fifth place with a good calf that carried a heavy age handicap.

The aged cow class was one of the best seen in California in recent years, and was won by the Burr Farm entry, Bess Creole Belle 3d, a cow that would show well in any company in her present condition. Two Jeffries cows took second and third places, with the Los Angeles County Farm entry in fourth place and another Burr Farm cow in fifth place.

Jim Jeffries started the real fireworks when his three year old won first place in a class of good ones, and from this time on the winnings of his entries were the feature of the show. Burr Farm scored second place over the George Junior Republic entry, with Santa Anita and Burr Farm in fourth and fifth places respectively.

The two year old class uncovered the grand champion in the Jeffries heifer, K. S. P. J. Pet Segis, one of the breed's great two year olds. It is worth remarking here that outside of her remarkable individuality she holds the California junior two year old record for milk production in one, seven, and 30 days, having milked as high as 99.6 pounds in one day with her first calf. She is on yearly test and eight months after calving is milking around 75 pounds per day. Second place went to the Santa Anita entry, with George Jr. Republic, A. J. Stalder and Burr Farm taking the other three moneys in the order named.

A strong class of senior yearlings produced the junior champion and reserve grand champion in the George Jr. Republic heifer Lady Dichter Ju-

539 E. Pasadena St., Pomona

Better service is assured by the advertiser if when writing you mention the California Cultivator.

liana, a sweetly turned daughter of the grand champion bull. The E. R. Stalder entry won second position by a shade over the Jeffries entry, with a Burr Farm daughter of Sir Veeman Korndyke Pontiac in fourth place, and an A. J. Stalder entry fifth.

A corking good lot of junior yearlings lined up for award, and first place finally went to the Jeffries heifer, K. S. P. J. Pietertje Girl, over the three Santa Anita entries that won one, two, three at the state fair. Fifth place went to the Burr Farm entry.

The senior heifer calves made up the largest class of the show and there were no real tailenders. The blue went to the Santa Anita entry, a trim young daughter of Prince Walker Cornucopia, with Jeffries entries in second and fourth places, an A. J. Stalder entry in third place, and a Burr Farm entry fifth.

Jeffries scored first and fifth places in a flashy class of junior heifer calves, with Santa Anita, A. J. Stalder, and George, Jr., Republic dividing the other three moneys in the order named.

In the aged herd class George, Jr., Republic scored first with Santa Anita, Burr Farm and A. J. Stalder finishing in the order named.

The awards in the individual classes were a forerunner of the runaway the Jeffries entries were to make of the balance of the group classes, where they won first young herd, first calf herd, first get of sire, first, second and fourth produce of dam, and first for five cows in milk. All of the animals composing these groups, excepting the five cows in milk, were sired by King Segis Pontiac Jannek, and in the milk group one of the five was his grand champion daughter.

These group classes were among the very best ever shown at any show in California, the Santa Anita, Burr Farm, Stalder, and George Jr. Republic entries being of a quality that would do credit to any show.

Professor Kildee of Ames, Iowa, placed the awards in his usual thorough and businesslike manner to the general satisfaction of everyone. The awards:

Holstein Awards

Exhibitors—Anita M. Baldwin, Santa Anita; E. D. Barry, Daggett; Burr Farm, Los Angeles; George Junior Republic, Chino; James J. Jeffries, Burbank; Los Angeles County Farm, Hondo; F. F. Early to Market—Full Weight

51 per cent of all hogs marketed in the United States in 1918 were Duroc-Jerseys.

Duroc-Jersey hogs have proved themselves in championship shows as well as on the market.

Duroc-Jersey hogs raise large families and put on weight quickly. They are hardy, easy feeding animals that mature at an early age, and are uniformly red in color.

Craig Ranch Durocs

Seen at Los Angeles Livestock Show

At last week's big swine show at Exposition Park the Craig Ranch Durocs won a fair share of ribbons, and created much popular favor for the breed.

PATHFINDER'S LIKENESS, JR.

Our great young boar, Pathfinder's Likeness, Jr., stood next the top in strong class; litter brother and sister both up in the money.

For litter of fall pigs Pathfinder's Likeness Queen stood first.

Crack young boars for the trade.

J. C. Craig

Ranch at Owensmouth

City Office, 321 W. 3rd St., Los Angeles

A-1 Duroc Ranch

Where one of the state's greatest herds of Duroc-Jerseys is maintained. For years our Durocs have proven profitable to farmer and breeder alike. Better place your order now for spring pigs as what we will be able to spare will go quickly. Remember, this is the home of the state's highest priced (\$1500) and most valuable Duroc-Jersey sow.

J. P. Walker, RFD 1, Box 40½, Visalia, Cal.

**The Greatest Duroc Boar of His Age!
Choice Wonder 3d**

a winner at the 1919 Iowa State fair, sired by the great boar, Mahaska Wonder, and a litter mate to the first prize junior boar of Iowa, heads our herd. He is the largest, heaviest boned, best footed boar in the state and he is being mated to the sows that have made this herd famous for futurity winners. Get your order in early for his pigs. Prices are most moderate. Satisfaction guaranteed.

JUNE ACRES STOCK FARM

V. F. Dolcini, Davis, Cal.

FANNIE'S ORION KING

heads our select string of Duroc brood sows. At the recent Los Angeles County sales we personally selected two high class yearling sows (Pathfinder and Great Sensation blood direct), mated for September litters to the Winsor Ranch big-type boars. They find good company at our ranch.

C. C. ELLIS

EXETER, CAL.

Oakmere Ranch Durocs and Polands

sired by Great Model, Great Sensation 3rd, Winsor's Giant Orion in Durocs, and Oakmere Price, by Black Price, Black Bob, Wonder Boy, and our Great Liberator Boy, in the Polands. Breeding stock priced low for early delivery. Special, 2 great Duroc boar prospects of January farrow, Tops from big litters, and 600 pound sows, fit for any herd, 1st choice \$60, 2nd choice \$45, crated, immuned and guaranteed. We refund money to any buyer without questions.

Grand Champion Holstein-Friesian

Bull of California for 1920

Dichter Spofford Korndyke Lad 5th

At the L. A. Livestock Show

We won fourteen prizes on an entry of twelve animals, including

- Senior and Grand Champion Bull.
- Junior and Reserve Grand Champion Heifer
- First Aged Herd.

The heifer awarded Junior and Reserve Grand Champion is a daughter of our Grand Champion Bull.

These winnings in the strongest classes of Holsteins ever shown in the West, under one of the greatest Holstein judges in the United States, Prof. H. H. Kildee.

Five cows in milk—1, Jeffries. 2, Baldwin. 3, Burr.

The Guernsey Show

The showing made by the Guernsey breeders can be rated as the strongest ever made in California. The four veteran exhibitors, W. H. Dupee, Santee; Brant Rancho, Owensmouth; Hollow-Hill Farm, Colton, and A. B. Humphrey, Escalon, crossed swords and met a new exhibitor—the Winsor Ranch, Bonita, whose entries were shown by Dupee, from whom they were secured.

From start to finish the show was one of class and balance, and was declared by Professor Kildee to have been one of the best he had judged. Several important changes were made from the placings at Sacramento.

Humphrey's Nobleman of Maple Hill, that was third among the two year olds at the state fair, won his class and was made senior champion over the Sacramento grand champion, Princess of Meadowbrook, the 12 year old state fair champion at Sacramento in 1919 and 1920, was left out of the money by the judge, who stated that while she was a real dairy cow she was not representative of the modern Guernsey type. The grand champion bull was uncovered in the senior yearling class and was the typy Veda's May King of Edgemoor, recently purchased from W. H. Dupee by the Winsor Ranch. Dupee's aged cow, Cheminante, first prize aged cow at the 1919 National, was senior and grand champion, and the same herd furnished both the junior champions. Hollow Hill Farm was a strong contender in all classes and won the junior yearling bill, reserve junior champion bull and the senior heifer calf. Brant took first with his aged herd and his five cows in milk and Dupee carried off the honors in the other groups.

The awards follow:

Guernseys

Exhibitors: W. H. Dupee, Santee; Elliott-Brant Rancho, Owensmouth; Hollow Hill Farm, Colton; A. B. Humphrey, Escalon.

Aged bull—1, Elliott-Brant on May King of Fern Ridge. 2, Humphrey on Escalon Challenger.

Two-year-old—1, Humphrey on Nobleman of Maple Hill. 2, Hollow Hill on Topper Langdon of Hollow Hill Farm.

Senior yearling bull—1, Dupee on Veda's May King of Edgemoor. 2, Dupee on Masterpiece of Edgemoor.

Junior yearling bull—1, Hollow Hill on Reuben King of H. H. F. 2, Dupee on Imperator of Edgemoor.

Yearling heifer—1, Dupee on Patroness of Edgemoor. 2, Hollow Hill on Della Langdon of H. H. F. 3, Dupee on Dolly Dolly of Edgemoor. 4, Elliott-Brant on Rosemary of the Rancho. 5, Humphrey on Escalon Lass.

Yearling heifer—1, Dupee on Bar Maid of Edgemoor. 2, Hollow Hill on Nesha E. King of H. H. F. 3, Hollow Hill on Rosie E. King of H. H. F. 4, Elliott-Brant on Melissa of the Rancho. 5, Humphrey on Escalon Rose.

Senior heifer calf—1, Hollow Hill on Caroline E. Langdon of H. H. F. 2, Dupee on Beautiful Rose of Edgemoor. 3, Dupee on Mary's May Rose of Edgemoor. 4, Elliott-Brant on Althea of the Rancho. 5, Elliott-Brant on Eleanor of the Rancho.

Junior heifer calf—1, Dupee on Minuet of Edgemoor. 2, Dupee on Vampire of Edgemoor. 3, Hollow Hill on Brittanla E. King of H. H. F. 4, Humphrey on Escalon Marjorie. 5, Elliott-Brant on Bertha of the Rancho.

Senior champion bull—Nobleman of Maple Hill; reserve, May King of Fern Ridge.

Junior champion bull—Veda's May King of Edgemoor; reserve, Carl E. King of H. H. F.

Senior champion cow—Cheminante 11th; reserve, Little Queen of the Rancho.

Junior champion female—Patroness of Edgemoor; reserve, Minuet of Edgemoor.

Grand champion bull—Veda's May King of Edgemoor; reserve, Nobleman of Maple Hill.

Aged herd—1, Elliott-Brant. 2, Hollow Hill. 3, Humphrey.

Young herd—1, Dupee. 2, Hollow Hill.

Calf herd—1, Dupee. 2, Hollow Hill. 3, Elliott-Brant.

Get of sire—1, Dupee. 2, Hollow Hill. 3, Dupee. 4, Hollow Hill. 5, Humphrey.

Produce of dam—1, Dupee. 2, Hollow Hill. 3, Humphrey. 4, Elliott-Brant. 5, Hollow Hill.

Five cows in milk—1, Elliott-Brant. 2, Hollow Hill.

The Jerseys

The exhibit of Jerseys was entirely creditable, in view of the fact that the show was held in the heart of a Black and White camp, and it was a stronger exhibit than last year's show. The show was largely local except for the strong Thorp herd from the North. The Jersey breed is entitled to more publicity in the South than it has been getting. Some of the best herds in the state are located near Los Angeles, and their owners are overlooking an opportunity when they fail to take advantage of the Los Angeles Livestock Show. All the way through the fight for the top ratings was between the Thorp and Brown entries, and Judge Platt managed to distribute the ribbons fairly equally.

Thorp developed more strength in the bull classes and landed the senior, junior and grand championships. Jolly Senator Raleigh, a veteran of the circuit and last year's champion, repeated. Biddy's King of Mossdale, junior champion at Sacramento, kept that position in the final awards.

Brown's Shy Lady Viola, the 1919 champion, was again out in front and was made senior and grand champion, and her stall mate, the lovely senior yearling, Financier's Ida, was the junior champion. Thorp took most of the group classes over Brown. West won the produce of dam class.

The awards follow:

Exhibitors: Grant A. Brown, El Monte; J. E. Hathaway, Norwalk; J. E. Thorp, Lockeford; F. M. West, Fullerton; Winsor Ranch, Bonita.

Aged bull—1, Thorp on Jolly Senator Raleigh. 2, Brown on Lady Shylock's Financier. 3, Hathaway on Raleigh's Delight.

Senior yearling bull—1, Thorp on Biddy's King of Mossdale. 2, Winsor on Beauty's White Sox.

Junior yearling bull—1, Brown on Financial Marjoram Count.

Senior bull calf—1, Thorp on Fairy Boy of Mossdale. 2, Brown on Financier's Gertie's Lad. 3, West on Maid's Noble Investment. 4, West on Jewel's Virgil.

Cow 4 years old or over—1, Brown on Shy Lady Viola. 2, Thorp on Salome of Mossdale. 3, Thorp on Nornie of Mossdale. 4, Thorp on Sonny St. Heller's Daughter.

Cow 3 years old and under 4—1, Brown on Financier's Viola Lass. 2, Thorp on Desert's Honeysuckle.

Heifer 2 years old and under 3—1, Thorp on Goldies Nehalem Cowslip. 2, West on Miss Silverside's Gipsy. 3, Brown on Financier's Daisy Witch. 4, Thorp on Bonnie of Mossdale 2nd. 5, Brown on Lena Oakhurst.

Senior yearling heifer—1, Brown on Financier's Ida. 2, West on Miss Silver-side's Nina. 3, Thorp on Violet of Mossdale. 4, West on Miss Raleigh's Barbara. 5, Thorp on Gladys of Mossdale.

Junior yearling heifer—1, Thorp on Queen Bess of Mossdale. 2, Brown on Shylock's Shy Joan. 3, Brown on Shylock's Elodine.

Senior heifer calf—1, Brown on Shylock's Countess. 2, Thorp on Sonny's Blossom of Mossdale. 3, Thorp on Jolly Emerilla of M. 4, Brown on Shylock's Nancy. 5, Thorp on Grlie of Mossdale.

Junior heifer calf—1, Brown on Shylock's Lottie. 2, West on Sunkist Lass Martha. 3, Thorp on Ramona of Mossdale.

Senior champion bull—Jolly Senator Raleigh.

Junior champion bull—Biddy's King of Mossdale; reserve, Financial Marjoram Count.

Senior champion cow—Shy Lady Viola; reserve, Goldies Nehalem Cowslip.

Junior champion heifer—Financier's Ida; reserve, Queen Bess of Mossdale.

Grand champion bull—Jolly Senator Raleigh; reserve, Biddy's King of Mossdale.

Grand champion cow or heifer—Shy Lady Viola; reserve, Financier's Ida.

Aged herd—1, Thorp. 2, Brown.

Young herd—1, Thorp. 2, Brown.

Calf herd—1, Thorp. 2, Brown.
Get of sire—1, Thorp. 2, Brown.
Produce of dam—1, West. 2, Thorp.
3, Brown. 4, Brown.
Five cows in milk—1, Brown. 2, Thorp.

The Ayrshires

But two herds of Ayrshires came before Judge Platt. The Steybrae herd from San Mateo divided honors with A. McMinn from Litchfield, Arizona. Steybrae had the grand champion cow in Willowmoor Vesta 4th and the reserve champion bull in Ayrmont. McMinn's Dairy King of Arizona was fortunate to be grand champion bull. The same herd had the reserve champion female with Annie Rooney.

THE BEEF CATTLE

By R. P. Royce

The exhibit of the beef breeds at Los Angeles was one of the strongest features of the show and the quality of the exhibits marks a distinct improvement over either of the former shows. Many of the leading herds of California were represented, and Nevada, Arizona, Washington and Colorado each sent one herd.

While Southern California breeders have not turned as readily to the improved breeds of beef cattle as they have the dairy breeds, the industry is an important one in that section of the state, and the more progressive cattlemen are concerning themselves with the possibilities for improving their range herds. In this movement the Los Angeles show is proving a potent factor. Shorthorns led in numbers but were closely pressed by Herefords. The Angus show was more important than the one staged at Sacramento.

The Shorthorns

This year's showing of the Reds, Whites and Roans was a distinct improvement over former shows at Los Angeles, and while a few exhibitors who entered the lists at Sacramento failed to be on hand, enough of the good herds were out to make a well balanced show of much class. Generally speaking, the ratings given the various classes met with approval notwithstanding the fact that Judge Frank W. Van Natta made radical changes from the placings at Sacramento. Nearly every herd showed improvement over their state fair form. The Colorado herd that had been entered failed to materialize.

One of the most important changes from previous ratings occurred in the two year old bull class. At Los Angeles the very tiny roan, Blackhawk Villager, was sent to the top and it must be said that he looked better in that position than in the third place he held at Sacramento. This bull lacks only a week of being a senior yearling, and though handicapped with an off date, it is quite certain that he is of championship caliber. Fronted with a head of character, of even top and sufficient depth, quite thick and extremely smooth and withal a style of his own, he downed all competition and went through to the purple. Dalmien Count, the thick Pacheco roan, occupied second, as before, over the state fair grand champion, the red Imp. Scottish Lord, shown by Glide. Bond was fourth with his red and white entry over an attractive prospect shown quite thin by Vaughn. The two senior yearlings were reversed from previous alignment. Baron Lancaster, shown by Dibblee, standing above Glide's Cheerful Count. Only two junior yearlings were out and the white Spicy Count, shown by Glide, kept his lead over the Pacheco entry.

The senior calves were a strong class and again the corking good thick white youngster, Pacheco Lad, 215th, led out in front and was later made junior champion and gave the senior champion a run for the top purple. Silver Cup, the white Dibblee calf, went up to second and King's Count, from the Glide herd, again separated him from his stall mate, but the order was reversed. Blackhawk was fifth with a white calf. The winner is a calf that combines fleshing, smoothness and quality and approved type. The four juniors yielded top honors to the thick, sappy, mossy coated roan youngster shown by Bond. This calf will bear watching and is a credit to his young fitter, the junior Bond. Not many better juniors have been seen out this way. Two Dibblee calves came next and the roan stepped above

150 HOLSTEINS 150

At Public Auction

State Fair Grounds, Sacramento, Cal.

November 10-11, 1920

Toyon Farm Association, with a total of 350 registered Holsteins on their farms, have decided to consolidate their Holsteins into one herd on the Brentwood Farm, and to conform with present accommodations on this farm, a reduction is necessary. This sale will be the means of making the reduction, and some of the most promising cows and heifers in the entire holdings will sell. The offering will include approximately

100 COWS
of Milking Age

30 HEIFERS
Bred and Open

25 BULLS
Mostly Ready for Service

The female offering contains the largest number of yearly record cows and heifers, daughters of yearly record dams, and females now on yearly test, that have yet appeared in a western sale. The breeding of the offering throughout is most substantial and popular, and the type of the offering is especially satisfactory. A general summary of some of the individuals and groups includes:

14 DAUGHTERS OF SIR BESSIE FOBES TRITOMIA, who is by Fobes Tritomia Mutual De Kol, and out of Jessie Fobes Bessie Homestead, 31.96 lbs. butter in 7 days as a 4-year-old, 932.74 lbs. butter in one year at mature age, and she topped the Detroit National Sale at \$4,600.00. These are out of dams with records up to over 27 lbs. butter in 7 days, and several out of dams now making good yearly records or with yearly records already completed.

2 DAUGHTERS OF SIR ORMSBY BURKE SEGIS, both with good records and out of good record dams.

A DAUGHTER of Johanna Colantha Champion, with 508.58 lbs. butter to her credit in 296 days as a 3-year-old.

A 24-POUND DAUGHTER of Sir Korndyke Hengerveld De Kol 31st, with 644.30 lbs. butter in one year as a 4-year-old.

A 23-POUND DAUGHTER of Sir Korndyke Hengerveld De Kol 11th, out of a 26.08-lb. 2-year-old daughter of a 31-lb cow.

A 23-POUND COW with 627.50 lbs. butter in one year, again on yearly test with 443.19 lbs. butter to her credit in 198 days.

A 21-POUND DAUGHTER of Sir Fayne Concordia, with 630.75 lbs. butter in one year as a 4-year-old, out of a daughter of King Segis Pontiac.

A 24-POUND GRANDDAUGHTER of Colantha Johanna Lad, with 628.60 lbs. butter in one year.

A 23-POUND granddaughter of King Walker, bred to Sir Aaggie Mead.

A 21-POUND 3-YEAR-OLD, with 760.01 lbs. butter in one year.

A 19-POUND 3-YEAR-OLD daughter of Sir Korndyke Pietertje Hartog, with 760 lbs. butter from over 18,000 lbs. milk in one year.

A 4-YEAR-OLD with 403.47 lbs. butter, to her credit in 232 days, her dam a 26-lb. cow.

A 19-POUND 4-YEAR-OLD with 358.74 lbs. butter to her credit in 184 days, her dam a 20-lb. 4-year-old granddaughter of Pontiac Korndyke.

A 19-POUND 3-YEAR-OLD with 318.26 lbs. butter to her credit in 137 days. By a son of Vickery Vale, 937.35 lbs. butter from 21,550.6 lbs. milk in one year.

A 23-POUND DAUGHTER of Colantha Johanna Champion out of a 20-lb. dam.

A 21-POUND granddaughter of Homestead Girl De Kol Sarcastic Lad, out of a 23-lb. dam.

A DAUGHTER of Sir Cascade Blossom Fayne, calving at 19 months has to her credit 389.92 lbs. butter in 244 days. Her dam now on yearly test with over 600 lbs. butter to her credit as a 3-year-old.

A GRANDDAUGHTER of Sir Korndyke Hengerveld De Kol, out of a dam that made 799.20 lbs. butter in one year as a 3-year-old.

A DAUGHTER of Sir Johanna Ruth Fayne, with 320.50 lbs. butter to her credit in 126 days, and bred to Sir Pietertje Ormsby Mercedes 43d.

A 2-YEAR-OLD daughter of Sir Johanna Ruth Fayne, bred to Sir Aaggie Mead.

9 DAUGHTERS OF MUTUAL FOBES LONGFIELD DE KOL, the famous bull whose long list of tested daughters includes several above 30 lbs. butter in 7 days. One of these is out of a 28-lb. dam, two out of 27-lb. dams, and the balance out of dams with records up to over 26 lbs. butter in 7 days.

4 DAUGHTERS OF SEGIS PONTIAC ACME, whose dam is an 885-lb. 4-year-old yearly record daughter of the former world's record cow Riverside Sadie De Kol Burke. All of these either have records or are now on yearly test, and all are out of good record dams.

A 2-YEAR-OLD daughter of Chima-cum Spring Farm King Pontiac, bred to Sir Aaggie Mead.

A 21-POUND 4-YEAR-OLD daughter of Sir Korndyke Ormsby De Kol, with 520.33 lbs. butter to her credit in 278 days.

A GRANDDAUGHTER of Sir Korndyke Hengerveld De Kol, out of a dam that made 704 lbs. butter in one year.

A DAUGHTER of North Star Happy Bonheur, out of a dam that made 799.20 lbs. butter in one year as a 3-year-old.

A 2-YEAR-OLD daughter of Sir Skylark Ormsby Hengerveld, now doing well on yearly test, and bred to Sir Pietertje Ormsby Canary.

A 643-POUND YEARLY RECORD COW, bred to Sir Pietertje Ormsby Canary.

A 17-POUND 2-YEAR-OLD granddaughter of Friend Hengerveld De Kol Butter Boy, out of a 644-lb. 4-year-old yearly record dam, second dam a 24-lb. 3-year-old, third dam a 22-lb. cow with 971.56 lbs. butter in one year.

DOZENS OF OTHERS with records up to over 24 lbs. butter in 7 days, many with yearly records or now on yearly test.

Females of Breeding Age in Calf to These Bulls:

SIR PIETERTJE ORMSBY MERCEDES 43D, whose sire is the world famous Sir Pietertje Ormsby Mercedes, and whose dam, Aaggie Wayne Peep, holds the world's record for butter production for five years, 4,992.03 lbs. from 110,706.5 lbs. milk.

SIR PIETERTJE ORMSBY CANARY, also by Sir Pietertje Ormsby Mercedes, and out of an 862.83-lb. record 3-year-old whose dam made 1,009.87 lbs. butter in one year.

SIR AAGGIE MEAD, by Sir Aaggie De Kol Acme, son of the world's record Aaggie Acme of Riverside 2nd, and out of the 1,215-lb. strictly official record cow Aralla De Kol Mead, her dam the 1,142-lb. former world's record cow Aralla De Kol.

HAZELWOOD DE KOL HENGERVERELD, by a proven grandson of Hengerveld De Kol and out of the 33.79-lb. cow Bonnie Lass Pauline, dam of Bonnie Ormsby Lass, Grand Champion cow at Panama-Pacific International Exposition.

NORTH STAR HAPPY BONHEUR, who is by Johanna Bonheur Champion a son of the famous show and breeding cow Johanna Bonheur, 890.84 lbs. butter in one year, and by a son of the former world's record cow Colantha 4th's Johanna, 1,247.83 lbs. butter in one year. His dam is a 30-lb. cow with 657.19 lbs. butter in 349 days, and she is by a son of the 313.30-lb. yearly record cow Lady Ormsby. This bull will be sold in the sale.

What Are These Things Worth to You as a Buyer?

This is the first entire offering of Federal tested cattle ever made in California.

No animal of breeding age, except fresh cows, will be offered unless believed to be safe in calf.

Note again the splendid breeding of the five bulls whose service these females carry. Their offspring

will carry splendid value anywhere.

There will not be more than three females in the sale with blemished udders.

Every animal positively guaranteed to be a breeder; every animal with individual Federal tuberculin test certificates, and sold subject to retest.

25 Bulls of Substantial Merit

While some of the bulls in this offering would not be out of place at the head of registered herds, yet it is hoped to make the offering of especial attraction to dairymen. A very large percentage of these bulls are ready for service, many of them out of dams now making splendid yearly records.

Plan now to attend this sale, for it is an offering of breeding animals combining qualities of type, production, breeding, and good health such as has seldom if ever been made in a sale of like magnitude in the west.

his white mate that is a little off in his rear underpinning. The Pacheco calf was handicapped by his lack of size.

Three of the four aged cows stood as at Sacramento and the great Little Sweetheart added a seventh blue to her string and likewise a purple. It will be some time before we see a better Shorthorn matron, such cows as Little Sweetheart appearing only rarely. In connection with this remarkable champion, credit must be given William Robertson, who has developed her and carried her through with great skill. The second place quite properly went to the Pacheco entry over the red imported cow shown by Dibblee that in turn fitted in above the Bond cow because of her scale.

Judge Van Natta rather mused

things up for the "ringside talent" when he got to the strong class of two year olds. First place was generally conceded to the Sacramento winner, Ormondale Maid 2d, from the Bond herd. However, when the smoke cleared another half-sister to the champion, the red and white, Golden Beauty, out of the money at the state fair, was in the lead. This lady has done remarkably well since her first show. She is thicker throughout, especially in the crops, and has grown a heavy coat, but the aforementioned talent seemed to feel that she hardly had improved sufficiently to entitle her to honors. Bond was second over the light roan, King's Countess, shown by Glide. It was generally felt that the Countess heifer was accorded more correct consideration than was given her before. She is remarkably

deep and compact, very thick, and handles exceptionally well. Two short aged Blackhawk entries followed and the second prize heifer at Sacramento was left out of the money. The winning Pacheco entry was reserve senior champion.

The five senior yearlings had the lovely White Pacheco in the lead. She is attractive from most any standpoint and seems to have improved in handling since the earlier show. At that she had her hands full to take the measure of the nicely balanced roan, Village Rose. Glide also took the next place and Pacheco and Dibblee finished in the order named.

There were six junior yearlings lined up behind Pacheco Doris, but as a whole the class was not overly strong.

The senior calves furnished the junior champion, as at the state fair, in Sultan's Dale. This little lady is sweetly feminine, correct of lines and has just about all that one looks for in the way of character, fleshing and type. The next three places remained as formerly—Dibblee second and Glide third and fourth Blackhawk was fifth.

The junior babies were shifted considerably, the fourth calf at the state fair walking to the top and the Northern winner was left out of the money. This class made the fifth straight win for Pacheco and wound up an unusual record for that firm—five winning females, junior, reserve junior, reserve senior and reserve grand champion. Dibblee was in fourth with a beautiful roan that would undoubtedly have gone higher had she not been lame.

The group classes were a cleanup for the Pacheco Cattle Company. Starting with the winning of the aged herd, the Pacheco colors were out in front in each of the groups, including the get of sire. Such a record is most unusual and is cause for high congratulation to Messrs. Hawkins and Norman Hales. Glide was second in the aged group and also the young herd. Dibblee was second in the calf group. Blackhawk took the red in the get of sire and Bond was rated the same on his produce. The awards follow:

Shorthorn Awards

Exhibitors—William Bond, Newark; Thomas B. Dibblee Estate, Lompoc; Easton & Ward, Diablo; T. S. Glide, Davis; Pacheco Cattle Co., Hollister; Howard Vaughn, Sacramento.

Aged bull—1, Easton & Ward on Blackhawk Villager. 2, Pacheco on Dalmeny Count. 3, Glide on Scottish Lord. 4, Bond on Cumberland Gloster. 5, Vaughn on Right Sort, Jr.

Senior yearling bull—1, Dibblee on Baron Lancaster. 2, Glide on Cheerful Count.

Junior yearling bull—1, Glide on Spicy Count. 2, Pacheco on Amanda's Dale.

Senior bull calf—1, Pacheco on Pacheco Lad, 215. 2, Dibblee on Silver Cup. 3, Glide on King's Count. 4, Dibblee on Baronson. 5, Easton & Ward on Blackhawk White Beau.

Junior bull calf—1, Bond on Cumberland Goods. 2, Dibblee on Royal Clansman. 3, Dibblee on Sterling Lancaster. 4, Pacheco on Pearl's Pacheco.

Aged cow—1, Glide on Little Sweetheart. 2, Pacheco on Pacheco Lass, 80. 3, Dibblee on Bright Bess of Collynie. 4, Bond on Mayfield Victoria.

Two-year-old—1, Pacheco on Golden Beauty. 2, Bond on Ormondale Maid 2d. 3, Glide on King's Countess. 4, Easton & Ward on Blackhawk Roan Lady. 5, Easton & Ward on Blackhawk Queen.

Senior yearling heifer—1, Pacheco on White Pacheco. 2, Glide on Village Rose.

3, Glide on King's Countess 2nd. 4, Pacheco on Pacheco Bloom. 5, Dibblee on Orange Blossom A.

Junior yearling heifer—1, Pacheco on Pacheco Doris. 2, Bond on Cumberland Maid. 3, Glide on Village Girl. 4, Easton & Ward on Blackhawk Roan Lady 2nd. 5, Dibblee on Secret Clipper.

Senior heifer calf—1, Pacheco on Sultan's Dale. 2, Dibblee on Village Ruby. 3, Glide on Hillcrest Flower 3rd. 4, Easton & Ward on Blackhawk Victoria 2nd. 5, Dibblee on Village Fair Girl.

Junior heifer calf—1, Pacheco on Pacheco Doris 2nd. 2, Pacheco on Pacheco Lass, 213. 3, Dibblee on Lavender Queen 5th. 4, Dibblee on Princess Royal. 5, Easton & Ward on Blackhawk Victoria 3rd.

Senior champion bull—Blackhawk Villager.

Junior champion bull—Pacheco Lad 215. Reserve junior champion bull—Spicy Count.

Grand champion bull—Blackhawk Villager.

Senior champion cow—Little Sweetheart; reserve, Golden Beauty.

Junior champion female—Sultan's Dale; reserve, White Pacheco.

Grand champion female—Little Sweetheart; reserve, Sultan's Dale.

Aged herd—1, Pacheco. 2, Glide. 3, Bond.

Young herd—1, Pacheco. 2, Glide. 3, Dibblee.

Calf herd—1, Pacheco. 2, Dibblee. 3, Glide. 4, Dibblee.

Four animals, either sex—1, Pacheco, get of Pacheco Lad, 58. 2, Easton & Ward, get of Roan Radium. 3, Bond. 4, Glide.

Two animals, either sex—1, Pacheco, produce of Pacheco Lass, 65. 2, Bond. 3, Glide. 4, Glide.

The Herefords

The Hereford show at Los Angeles brought together several of the herds shown at Sacramento and was augmented by an Arizona herd and the Glendale polled cattle from Colorado.

The exhibit was quite the best ever made in the South and was almost the equal of that at the state fair.

Much interest was manifested around the Whiteface barns and it was rumored that several herds would likely be started during the coming year, thus demonstrating again the real value of a livestock show.

The classes were passed on by the widely known Hereford breeder and judge, Frank W. Van Natta, formerly of Indiana but now making his home near Los Angeles, to the universal approval of all.

Five aged bulls were forward with the top tie going to Paragon Dare, owned by Jacks. This bull was rather outstanding in his class on account of his scale and thickness. Bonnie Donald, from the Arizona herd, was properly second over a stable mate. A poll from Colorado with more condition and class was above a smooth headed bull shown by Emmons.

In the two year old class the Sacramento champion, Beau Blanchard 76th, from the Cazler herd, stood out in front by a wide margin. This bull continues to develop and showed improvement over his earlier form. His general type, strong front, level top, extreme thickness and massive quarters stamp him as one of the best young bulls of the West. It naturally followed that he was made senior and grand champion.

A son of Woodford had no trouble holding second by virtue of his thickness, quality and character over the polled junior Grove. Jacks had the only senior yearling.

Among the four junior yearlings, Judge Van Natta selected the Cazler entry, Nevada Lad 2d, that was more compact, over Jacks' Sacramento winner, that had the advantage of size.

Two polled calves from the Glendale herd followed. In the senior class for the first time during the show a polled entry took first rating. This calf, Bonnie Repeater, was later reserve junior champion. The other two places were filled by Jacks and Thomas and Hill.

The junior class, one of the strongest, and as at the state fair furnished the junior champion, but this time another son of Beau Blanchard was the winner. It will be recalled that the Briggs calf, Pilot, won at Sacramento and was declared to have been one of the most attractive calves seen.

The Los Angeles winner, owned by Cazler & Sons, always had the advantage of condition, and this time it won for him. The two are exceptionally good juniors. The next two places were taken by polled entries.

Only three aged cows answered the call and the top was easy with the polled cow, Pearl, grand champion at the 1919 state fair. The cow is probably the equal of any polled cow in the breed. She has scale, extreme thickness, levelness, quality and balance, and shows rare character. She had friends for leading honors. Second place fell to Miss Dale on account

of her scale over the Cazier matron. Bocaldo Beauty, the state fair grand champion, led the five two year olds by a wide margin. This heifer is as thickly covered as one could wish and she handles exceptionally well. She lacks somewhat in width and depth of quarter, and for that reason she failed to make the final grade, being stopped at senior champion. Her stall mate, Georgia Princess 10th, was at home in second above a polled entry from Colorado that was quite thick.

The Briggs herd took first place over the three senior yearlings, none of which were outstanding.

Ruth Domino, the precocious junior yearling shown by Jacks, won her class hands down, and when later she was made grand champion over the two year old, because of her better balance, being particularly better in the quarters, it was felt that the decision was entirely correct. Jacks was second over Briggs and a poll crowded out a Cazier entry.

The Nevada herd furnished the winner in the next class with the growthy, thick Carnation 4th. A Colorado poll, quite thick, but light of quarter, was second, and the size of the Jacks heifer carried her above the one shown by Briggs. The top pair of juniors at Sacramento was reversed, Briggs taking a close decision over Jacks.

Jacks took the aged herd and Cazier and Sons were winners of the other groups. The awards follow:

Hereford Awards

Exhibitors—Babbitt & Cowden, Cashion, Arizona; William Briggs & Son, Dixon; John H. Cazier & Sons Co., Wells, Nevada; G. W. Emmons, Danville; Glendale Stock Farm, Aspen, Colo.; Romie C. Jacks, San Francisco; C. H. Hill, Jr., Los Angeles.

Aged bull—1, Jacks on Paragon Dare. 2, Babbitt & Cowden on Bonnie Donald. 3, Babbitt & Cowden on Beau Bonnie. 4, Glendale on Polled Gay Lad. 5, Emmons on Grove's Perfection.

Two-year-old—1, Cazier & Sons on Beau Blanchard 76th. 2, Jacks on Woodford 34th. 3, Emmons on Junior Grove. Senior yearling bull—1, Jacks on Beau Blanc Visage 9th.

Junior yearling bull—1, Cazier & Sons on Nevada Lad 72nd. 2, Jacks on Wyoming's Type. 3, Glendale on Woodford Grove. 4, Glendale on Briton Pride.

Senior bull calf—1, Glendale on Bonnie Repeater 2nd. 2, Jacks on Crimson 1st. 3, Hill on Beau Primrose.

Junior bull calf—1, Cazier & Sons on Blanchard 1st; 2, Briggs & Son on Piot. 3, Glendale on Glendale Echo. 4, Emmons on Diablo's Fearless.

Aged cow—1, Glendale on Pearl. 2, Briggs & Son on Miss Dale. 3, Jacks on Miss Debonair 4th.

Two-year-old—1, Jacks on Bocaldo Beauty. 2, Jacks on Gay Princess 10th. 3, Glendale on Woodford Lady P. 4, Briggs & Son on Beauty. 5, Emmons on Polled Laura.

Senior yearling heifer—1, Briggs & Son on Miss Era 14th. 2, Cazier & Sons on Carnation Girl 2nd. 3, Briggs & Son on Golden Lass 22nd.

Senior champion bull—Beau Blanchard 76th; reserve, Paragon Duro.

Junior champion bull—Blanchard 1st; reserve, Bonnie Repeater 2nd.

Senior champion cow—Bocaldo Beauty; reserve, Pearl.

Junior champion heifer—Ruth Domino; reserve, Carnation 4th.

Grand champion bull—Beau Blanchard 76th; reserve, Blanchard 1st.

Grand champion cow or heifer—Ruth Domino; reserve, Bocaldo Beauty.

Aged herd—1, Jacks; 2, Glendale.

Young herd—1, Cazier; 2, Glendale.

Calf herd—1, Cazier; 2, Glendale.

Four animals of either sex—1, Cazier; 2, Glendale.

The Aberdeen Angus

The doddy showing in this state continues light in number but strong in quality. Once again the strong Congdon & Battles herd from North Yakima, Washington, was on hand with a full herd of high merit. Indeed, this herd is one of the leading herds of the breed in America. It is a long ship from the Northwest to Los Angeles, but it takes such enterprise to extend the breeds lines. The bread that Otto Battles is casting on California waters is certain to come back many fold. Great credit should be given the owners of the Lilac Ranch, Escondido, for bringing out a creditable exhibit.

All firsts, save that for senior heifer calves, went to the northern herd.

Brideman C. B. 5th was junior and grand champion bull and Pride C. B.

5th was senior and grand champion cow.

Fat Classes

The showing made in the fat classes was small, but in view of the fact that the finishing of top steer is a rather limited practice in this state, a stronger showing was hardly to be expected. But great shows very often have to start from small beginnings and it can be predicted that the time will come when the steer classes will become important features of California livestock shows. Certainly, we know that California can produce as choice steers as any state in the Union. It but remains to develop our fat classes.

Congdon and Battles, North Yakima, Washington, showed the only two year old, a pure bred Angus of fair type and finish.

In the yearling class a grade Hereford steer shown by the Kern County Land and Cattle Co., Bakersfield, was placed first. While lacking the qualities of a real show steer, he was thick, fairly smooth and better balanced than the black in second. Another Kern County product won third over a spayed Shorthorn heifer shown by Easton and Ward that was hardly as far along.

In the under year class the Washington entry, another pure bred Angus, was an easy winner over a White-face youngster shown by Emmons.

The winner of the last class was quite the class of the show and is a calf of considerable possibilities. Naturally he was the champion.

The awards follow:

Exhibitors: Congdon & Battles, Yakima, Wash.; Easton & Ward, Diablo; G. W. Emmons, Danville; Glendale Stock Farm, Aspen, Colo.; Kern County Land

Co., Bakersfield.

Steer, Spayed or Martin heifer, 2 years old and under 3—1, Congdon & Battles on Brideman C. B. 3rd.

Steer, Spayed or Martin heifer, year old and under 2—1, Kern County Land Co. on Hereford. 2, Congdon & Battles on Ericaman C. B. 2nd. 3, Kern County Land Co. on Hereford. 4, Easton & Ward on Blackhawk Violet Bud.

Rosamaines Rancho, Riverside, Cal.

October 19-20-21, 1920

King Pontiac Netherland Segis 3rd

Sir Ormsby Skylark Rauwerd

Tuesday, October 19, at 9 a.m. sharp,
We Will Sell Rosamaines Rancho in Two Parcels

235 ACRES—On which the buildings are located, with improvements costing over \$200 per acre at normal costs; 100 acres finest pasture in California with abundant water and shade; 60 acres in fine stand of alfalfa; 40 acres in corn; motor equipped pumping plants; buildings all electric lighted and sewerage; a profit making property suitable for either beef or dairy cattle breeding.

TERMS ON THIS PARCEL: One-third cash, balance in six equal annual payments, interest at 7 per cent payable semi-annually, 2 per cent discount for cash on deferred payments. 397½ ACRES—Adjoining the parcel described above, all under cultivation, first class vineyard, orchard, or alfalfa land with abundant cheap water. This is an exceptional investment proposition taken either in connection with the balance of the Rancho or separately. TERMS ON THIS PARCEL: One-half cash, balance in four equal annual pay-

ments, seven per cent interest, payable semi-annually, two per cent discount for cash on deferred payments.

Following the sale of the Rancho we will sell

90 BIG RED GRADE SHORTHORN COWS, 3 TO 5 YEARS OLD, HEAVY WITH CALF.
50 REGISTERED DUROC-JERSEY HOGS
18 REGISTERED PERCHERON MARES & STALLIONS
1800 WHITE LEGHORN HENS AND PULLETS
A SMALL HERD OF GRADE DAIRY HEIFERS

THE IMPLEMENTS AND EQUIPMENT, including an almost new 12 foot McCormick Combined Harvester; a No. 50 Typhoon Ensilage cutter; a 20 h.p. motor; Osborn grain binder; beet drill; 8 farm wagons; plows, discs, rollers, mowing machines, rakes, harness, chains, lead bars, etc., and a complete acetylene lighting plant.

Wednesday and Thursday, October 20-21

We will disperse the entire high class herd of 150 REGISTERED HOLSTEINS

including the two great herd sires pictured above. This is one of the best collections yet offered in California, and just consider these facts: There are only 12 animals in the entire herd over 4 years old; there are only 7 animals in the entire herd over 6 years old; there are 105 descendants of the twice 34 lb. cow Gerben Abbekerk Maid in the sale; Gerben Abbekerk Maid herself, only nine years old, and seven of her two year old sisters by the same sire are in

the sale; it is the largest herd strong in Ormsby breeding ever offered in the west. Every animal is positively guaranteed to be a breeder; every animal, unless otherwise announced at sale, is tuberculin tested and sold subject to retest by the buyer.

November 4, Pacific Coast Hereford Breeders' Association, Sacramento.

November 5, J. H. Cazier & Sons, Sacramento.

November 6, H. M. Barngrover, Sacramento.

November 18, Finnel Ranch Company, Sacramento.

Shorthorns

November 16, Caledonia Farms, West Sacramento.

Jerseys

October 22, Grant A. Brown, Clearwater.

Poland Chinas

October 20, Kings Co. Poland China Breeders Assoc. Hanford.

October 27, Newton & Christiansen, Pomona.

Duroc-Jerseys

October 27, E. Avery Newton, Lankershim.

The Tarzana Ranch Hampshires, Van Nuys, had some very handsome winnings to their credit at the Los Angeles Live Stock Show. Their aged herd is well known to the ringside talent of last year and was much admired again this year. The grand champion boar, Tarzana Prince, by Liberty, was one of the real surprises of the show. Aside from the winnings in breeding classes, Tarzana Ranch was awarded first, second and third on fat barrow, any age, and first on pen of three barrows.

Chas. H. Tyler, Charnock Ranch, Hemet, while on his way to Los Angeles Livestock Show, brought along 130 purebred Duroc pigs with which he topped the market at 18 cents.

T. C. Scheer, Bethany, Illinois, is making the western fair circuit with an exhibit of Tamworth swine.

Dr. A. E. Roome, Los Angeles, has purchased for his Arizona ranch the prize winning Berkshire boar pig, Star Oaks Masterpiece, bought from Gardner Blackman, Perris.

A. J. Ludwig, Downey, bought the fine sow, Cherry Pathfinder Maid, at \$500, in the Diamond Bar sale, from which he has raised one of the top-notch litters of the year, sired by Mammoth Sensation, Jr.

F. L. Hall, Perris, reports the sale of two fine Berkshire sows to B. W. Selby, Ventura; likewise young boar to Italian Vineyard Co., Guastli.

E. R. Stalder, Wineville, was elated at capturing, among other prizes, first on junior bull calf, Nuevo Colantha Ormsby, sired by his herd bull, Rosamaines Pontiac Ormsby.

Bert Wilkerson of the Falfadale Farm, Perris, reports the sale of five spring gilts, including the first, fourth and fifth prize winners, at Sacramento, and one senior gilt, junior champion, at Tulare, to C. C. Ellis, Exeter.

The Diamond Bar Ranch reports sale of Reformers Model, 2nd prize senior boar pig at Sacramento, and three full sows to F. Smith, Hollister; also one boar pig to Matthews and Stearns, Santa Ana.

Maxwell & Penfield, Lankershim, sold two gilts to Elwood Ranch, Santa Barbara, one gilt to H. Denny, and one gilt to W. Stewart, both of Lankershim.

J. P. Walker, Visalia, reports the recent sale of nine sows and gilts and a boar to Kreis S. Thorne, Three Rivers, at a very satisfactory figure. The ten head sold were all foundation stock as Mr. Thorne is establishing a herd of high quality.

The Grant A. Brown sale of 21 head of pure-bred Jerseys from his Eastmont herd at El Monte is to be held at Clearwater on October 22. In this offering are 18 head of females, the majority of which are bred to the herd bull Lady Shyllock's Financier. The young daughters of Lady Shyllock's Financier are reserved by Mr. Brown.

Two notably good herds of registered Poland Chinas are to furnish a lot of good things for the public sale ring at Pomona on October 27. The Newton and Christiansen herds are known as good producing herds. In either herd is a fine string of big type brood sows that raise their litters. They are of popular lines of breeding, and they win prizes in the show ring. The herd boars and young boars to be seen on sale day will please the eye, too. Sale will be held at the Lookingbill and Velzey Sales Yards, Pomona. Write for the catalog.

THOROUGHLY EQUIPPED MODERN RANCH

(Continued from Page 505.)

ready planned to make an early introduction of a car of bulls and cows which will prove blue ribbon winners.

It is probable that Mr. Lewis takes greatest pleasure in his stable of pure bred Arabians. These noble animals attracted a large share of attention at the recent Los Angeles Livestock Show.

We will not refer to the qualities of Diamond Bar stock as considered from a pure bred standpoint, for this is merely a look-in at the ranch by a layman who is interested in the general arrangement and up to date saving appliances.

R. K. Walker, in charge of the swine department, recently gave us opportunity to inspect the buildings, feed houses, private railway line and some of the rich acres of this ranch. Mr. Walker, a graduate of Ames, was owner and manager of Devore ranch and later with Winsor.

The railway line is not a plaything, but is a standard gauge railway switching off from the Salt Lake line, which passes directly through the place. This siding, or rather spur, affords opportunity for setting a carload or

JACK KLEIN JOINS CULTIVATOR STAFF

The publishers of the California Cultivator are pleased to announce that arrangements have been completed whereby Jack Klein joins the staff in the capacity of livestock field representative. Mr. Klein's services will be available to all our readers and to the livestock breeders of Southern California and the Coast counties.

During the past year Mr. Klein has earned for himself the good will and respect of the livestock fraternity of this state and it is felt that he is in a position to greatly widen the service that this paper seeks to give our readers and advertisers. We further believe that the California Cultivator is now able to offer the livestock industry of this state a type of service unequalled by any paper west of the Cornbelt.

J. P. Bennett will continue the work in the territory north of the Tehachapi and will be able to accord that territory more intensive service.

Our readers are urged to avail themselves of the services of each of these members of the staff whenever the occasion arises.

At this time the publishers desire to thank the readers for their fine support which has made it possible for this publication to enjoy the distinction of being rated the leading agricultural weekly of California.—R. P. Royce.

drawn by gravity to the mill where it is ground, mixed and loaded into a tank on a flat car as shown in one of the illustrations earlier in this article. The method of feeding from this tank is shown better from that photograph than can be described.

Another type of dummy engine runs through the center of the farrowing barns. This is operated by gas en-

gine and is for the purpose of removing manure and refuse. It is set to run at a very low speed and a man in the pens on either side cleans and throws into the car the manure from each pen without stopping the "train." It takes but a few minutes to clean out the entire barn, perhaps a quarter of a mile long.

Nor is the whole effort of the ranch to secure comfort to the livestock. The quarters prepared for the men show that Mr. Lewis and his secretary, C. H. Hopkins, have planned a very complete series of rooms with reading room, baths and all modern home appliances.

There are few ranches in California which will be able to follow details as planned by Mr. Lewis, but it is a most interesting place to visit and one where the latchstring is always out at the big Diamond Bar sign on the Valley Boulevard from Los Angeles to Pomona.

SHEEP EMBARGO

A temporary embargo has been placed on all sheep located between Geyserville, Cloverdale, Hopland and intermediate points, making it now necessary for shippers to obtain a written permit from Charles Cooley, local inspector at Cloverdale, or other authorized representative of the state department of agriculture, before sheep will be accepted by the railroad company for feeding, slaughter, or other purposes. This action was taken to aid in the control of scabies infection.

LAUGH ON THE DOCTOR

An Illinois physician who had motored into an Ohio town found a porter standing back of the machine laughing.

"What's the joke?" inquired the owner.

"Nuthin', boss; but you're a doctor, ain't you?"

"Yes."

"I thought so when I saw that red cross on the front of your car. But if I owned the car I think I'd put the sign on the back."

The doctor walked around to the rear and looked at his license tag. It read: "46,000 Ill."—Rehoboth Sunday Herald.

Blackhawk Villager

Grand Champion Shorthorn Bull
Los Angeles Livestock Show

It is a distinct pleasure to announce the above award and to record the fact that our entire show herd represents the get of our herd bull.

ROAN RADIUM

(A richly bred son of the noted Radium)

This is our first year as exhibitors of Shorthorns, and we hope to achieve the same recognition everywhere accorded.

Blackhawk Shire Horses

Which have come to be recognized as the best in the West. During the past few years our horses have won more championships than those of any Western breeder.

If interested in Shorthorns or Shires we will be glad to have you visit our ranch.

Friday, November 12

50 High Class Females

10 Top Bulls

A Real Business Opportunity

There is no better opportunity facing the livestock industry of California than the production of registered Shorthorns. The market is here. No section can produce better cattle. The business is profitable because it is economically sound—and furthermore, the business is a pleasant one.

The Caledonia Farms sale offers a rare chance to make selections from what is generally considered to be one of the top collections of the breed.

Details of the offering will appear next week.

Shire Horses FOR SIZE BONE and QUALITY

More is required of horses than ever before hence the need of more size, weight and power. Large geldings never were higher. Shire geldings usually top the market. Use Shires to raise larger and better horses.

For information on Shires write, W. G. Lynch, Secretary American Shire Horse Association, Tonawanda, Illinois.

Use a Shorthorn Bull

You want the extra 50 to 200 lbs. weight and you will get it by using a Shorthorn bull. The Shorthorn steer finishes readily for the market at any age from calfhood. He keeps growing without losing his finish. The quiet temperament of the Shorthorn is a valuable asset.

DISPERSAL SALE REGISTERED 67 HOLSTEINS 67

Kounias Registered Stock Farms

On Waterford Road, three miles east of

Modesto, Cal.

Thursday, October 28 at 10 A.M.

This is a complete dispersal of one of the largest and best producing herds in the San Joaquin Valley, mostly young animals that have long years of usefulness before them.

Some of the Females

21 DAUGHTERS OF KING KORNDYKE HENGERSVELD ORMSBY 7TH, who is by a son of Pieterje Maid Ormsby, and is half brother to Ormsby Korndyke Lad, the greatest living sire of 1,000-lb. yearly record daughters. He was Grand Champion at Modesto Live Stock Show 1917.

9 DAUGHTERS OF KING KORNDYKE AAGGIE FAYNE, whose dam is a 33-lb. daughter of King Hengerveld Aaggie Fayne.

SIX DAUGHTERS of a 26-lb. cow that made 723.31 lbs. butter from 17,764.3 lbs. milk in one year. Five of them have A. R. O. records.

FOUR DAUGHTERS of a 20-lb. cow that made 615.02 lbs. butter from 16,764.4 lbs. milk in 327 days.

A 29.67-POUND 4-YEAR-OLD daughter of a 26-lb. cow that made 723.31 lbs. butter from 17,764.3 lbs. milk in one year.

A 20-POUND 4-YEAR-OLD, by a 33-lb. grandson of King Hengerveld, and out of a 31-lb. daughter of Sir Skylark Ormsby Hengerveld that made 1,127.27 lbs. butter in one year.

A 22-POUND GRANDDAUGHTER OF ARLA DE KOL, her two daughters and one son.

MANY COWS AND HEIFERS with official records up to over 20 lbs. butter in 7 days, and a large number of them out of good record dams.

REMEMBER—That about 30 of the cows and heifers are bred to KING KORNDYKE HENGERSVELD ORMSBY 7TH, or to KING KORNDYKE AAGGIE FAYNE.

A Considerable Number of Fresh Cows and Heavy Springers!

DAIRYMEN—Practically all of these young bulls carry a combination of Ormsby breeding and the blood that produced De Kol of Valley Mead, foundation cow of one of the best Morris families. Both of these lines of breeding are famous, not only for large production but good type as well.

Every animal positively guaranteed to be a breeder; every animal over six months old tuberculin tested and sold subject to retest by the buyer, except as announced at sale.

High Class Bulls in the Offering

A few of the bulls in this sale should find places at the head of registered herds, and every one of the balance can conservatively be rated as the good sort to head grade herds. Practically every bull is out of a good record dam, the young ones are growthy, of good type, and in good thrifty condition. Here is part of the list:

KING KORNDYKE AAGGIE FAYNE, the herd sire. Three years old, a good individual, almost white in color, out of a 33-lb. daughter of King Hengerveld Aaggie Fayne that milked 597 lbs. in 7 days. See his calves in the sale.

A SON OF JUDGE SEGIS, the famous son of King Segis heading the well known herd at Hollywood Farm, in Washington. His dam a 20-lb. 3-year-old daughter of a 31-lb. daughter of Sir Skylark Ormsby Hengerveld that made 1,127.27 lbs. butter in one year.

A SON OF KING KORNDYKE HENGERSVELD ORMSBY 7TH out of a 29.67-lb. 4-year-old whose 26-lb. dam made 723.31 lbs. butter in one year from 17,764.3 lbs. milk. He is a fine individual.

A SON OF KING KORNDYKE HENGERSVELD ORMSBY 7TH out of a dam that made 26.06 lbs. butter from 563.4 lbs. milk in 7 days.

A SON OF KING KORNDYKE HENGERSVELD ORMSBY 7TH out of a 22.51-lb. dam.

A SON OF KING KORNDYKE HENGERSVELD ORMSBY 7TH out of a 21.32-lb. 4-year-old daughter of a 22.51-lb. cow.

A SON OF KING KORNDYKE HENGERSVELD ORMSBY 7TH out of a 21.31-lb. 3-year-old daughter of a 20-lb. cow.

SONS OF KING KORNDYKE AAGGIE FAYNE out of dams with records up to over 18 lbs as 2-year-olds.

The Swine Show

By J. P. Bennett

The swine show at Los Angeles this year was in some respects the equal of the showing made at the state fair. While the number of hogs shown did not compare with Sacramento, the competition in many of the classes was keener and a higher class of animals shown.

The Durocs led in point of numbers, having a total of 45 per cent of all animals on the grounds. The Berkshires were second and the Poland Chinas third.

For a swine show of this size and character there are several improvements necessary for the convenience of the exhibitors. First, there is a real need of more adequate showing facilities. This year there were several classes, especially when the Durocs were being shown, where the judging arena was so crowded that it was difficult for both the judge and exhibitors to work under such conditions. However, all those interested displayed real sportsmanship and the show not only went very smoothly but was marked down as one of the most successful ones of the season.

Professor H. H. Kildee, Ames, Iowa, judged the Durocs; J. I. Thompson, Davis, judged the Polands and Berkshires, and C. R. Doty of Los Angeles, the Hampshires, Tamworths and other breeds. Each man rendered very efficient service and the awards were entirely satisfactory.

The Duroc Show

The Duroc breeders of Southern California seemed to almost have a monopoly of the exhibits at Los Angeles, as 45 per cent of the entire swine show was from this breed. The Duroc judging attracted a great deal of attention and the spectators who were fortunate enough to find standing room next to the arena were rewarded by one of the best exhibits of any breed of livestock on the grounds.

The large classes shown and the rather limited amount of space in the judging arena made it difficult for the spectator to see much of the show.

The senior and grand champion boar, Great Orion Sensation Jr., shown by Falfadale Farm, Perris, was the reserve senior champion at Sacramento. This boar is an extra large, smooth, mellow senior yearling and the favorite with the crowd for the highest honors. The reserve senior went to the Brant Rancho on the first prize aged boar, May Rose King. Charnock Cherry Friend, a typy junior yearling, won first for Charnock Ranch in that class.

Royal I Am, an outstanding senior boar pig, Cherry Pathfinder, shown by Lancaster, won first in class and junior champion with the junior boar pig, Cherry Pathfinder, shown by Diamond Bar Ranch, as junior reserve champion.

Among the aged sows the great sow, Queen of Pathfinders, added another grand champion ribbon to her long string of winnings, with the good senior yearling, Pathfinder Very Best, also exhibited by Diamond Bar, as reserve senior. Diamond Bar also won first in the junior yearling class with Orion Sensation Lady.

Brant Rancho had the junior champion on the good senior sow May Rose Tattletale, with the junior sow pig, Cherry Duchess 2d, shown by Diamond Bar, as junior reserve.

Prof. H. H. Kildee, Ames, Iowa, placed the awards as follows:
(Awards on Page 529.)

The Berkshire Show

The showing of Berkshire hogs at Los Angeles this year was one of the best made at any of the fairs this season. The competition was much keener than at the state fair and the exhibits as a whole were in much better bloom and condition. This latter feature caused the reversal of many placings made earlier in the season.

The Italian Vineyard Co., Guasti, showed the greatest improvement, especially in the sow classes. A. B. Humphrey, Escalon, was the heaviest winner, having both senior and junior champion boars and winning grand champion on Escalon Big Joe, by Big Leader. The reserve grand champion ribbon was awarded to J. Frances

O'Connor, Santa Rosa, on Enhancer, and was the favorite with some for the purple ribbon.

The grand champion sow, Grape Wild Rose 6th, shown by Humphrey, was one of the best Berkshire sows ever driven into any show ring and was a great credit to the breed.

The junior champion sow, Real Type's Belle 4th, shown by Italian Vineyard Co., was a very typy senior sow pig.

Taken as a whole, the Berkshire show was one of the classiest on the grounds, and for quality and uniformity of all animals shown, was hard to beat.

J. I. Thompson, Davis, tied the ribbons in a very satisfactory manner.

Exhibitors: Gardiner Blackman, Perris; J. C. Craig, Los Angeles; F. L. Hall, Perris; A. B. Humphrey, Escalon; Inglewood Union High School, Inglewood; Italian Vineyard Co., Guasti; J. Francis O'Connor, Santa Rosa.

Berkshire Awards

Aged boar—1, Bastanchury on Royal Longfellow. 2, Maler on Escalon Type. 3, Hall on Ames Rival 118th. 4, Italian Vineyard on Champion Masterpiece 8th.

Senior yearling—1, O'Connor on Enhancer. 2, Humphrey on Escalon Type. 3, Italian Vineyard on Model Leader 3rd.

Junior yearling—1, Humphrey on Escalon Big Joe. 2, Humphrey on Grape Wild Challenger. 3, Italian Vineyard on Real Type Symboleer 2nd. 4, Hall on Rose Crest Rival 11th. 5, Bastanchury on Baron Premier 157th.

Senior boar pig—1, Humphrey on Escalon Model Leader. 2, Hall on Rose Crest Rival 10th. 3, Blackman on Improver's Belle's Rival. 4, Humphrey on Bourbon Emblem. 5, Italian Vineyard on Royal Type 3rd.

Junior boar pig—Humphrey on Grape Wild Champion 2nd. 2, Humphrey on Grape Wild Champion. 3, Italian Vineyard on Del Rio 2nd. 4, Blackman on Star Oaks Masterpiece. 5, Italian Vineyard on Matchless Type 2nd.

Aged sow—1, Italian Vineyard on Willsona Laurel Princess. 2, Humphrey on Grape Wild Rose 2nd. 3, Italian Vineyard on Dukes Natoma Princess. 4, Hall on Mistress Fancy 2nd.

Senior yearling—1, Humphrey on Grape Wild Rose 6th. 2, Humphrey on Escalon Lady 5th. 3, Inglewood Union High School on Rivals Matchless Lady 6th. 4, Italian Vineyard on Emblems Queen 12th. 5, Italian Vineyard on Emblems Queen 13th.

Junior yearling—1, Italian Vineyard on Meadow Duchess 6th. 2, Humphrey on Grape Wild Rose 8th. 3, Italian Vineyard on Real Type's Lucindy 5th. 4, Italian Vineyard on Violet Fenn. 5, Humphrey on Grape Wild Rose 13th.

Senior sow pig—1, Italian Vineyard on Real Type Belle 4th. 2, Humphrey on Escalon May 13th. 3, Italian Vineyard on Castlevlew Duchess. 4, Italian Vineyard on Real Type Belle 5th. 5, Humphrey on Escalon Belle 5th.

Junior sow pig—1, Humphrey on Grape Wild Rose 19th. 2, Italian Vineyard on Matchless Lady Type. 3, Humphrey on Grape Wild Rose 21st. 4, Blackman on Model Lady. 5, Italian Vineyard on Burton's Orange Lady 2nd.

Aged herd—1, Humphrey. 2, Italian Vineyard. 3, Humphrey. 4, Bastanchury. Young herd—1, Humphrey. 2, Italian Vineyard. 3, Hall.

Herd bred by exhibitor—1 and 2, Humphrey. 3, Hall.
Get of sire—1, Humphrey on Get of Big Leader. 2, Italian Vineyard on Real Type. 3, Humphrey on Get of Winona Champion Leader.

Produce of sow—1 and 2, Humphrey. 3, Italian Vineyard.
Fat barrow—1 and 2, Humphrey. 3, Italian Vineyard.

Pen of barrows—1, Humphrey. 2, Italian Vineyard.

Senior champion boar—Humphrey on Escalon Big Joe; reserve, O'Connor on Enhancer.

Junior champion boar—Humphrey on Escalon Model Leader; reserve, Humphrey on Grape Wild Champion 2nd.

Grand champion boar—Humphrey on Escalon Big Joe; reserve, O'Connor on Enhancer.

Senior champion sow—Humphrey on Grape Wild Rose 6th; reserve, Italian Vineyard on Meadowview Duchess 6th.

Junior champion sow—Italian Vineyard on Real Type Belle 4th; reserve, Humphrey on Grape Wild Rose 19th.

Grand champion sow—Humphrey on Grape Wild Rose 6th; reserve, Italian Vineyard on Real Type Belle 4th.

The Poland Chinas

The Poland China show was very light this year, but most of the animals shown were of excellent quality. Owing to difficulty in shipment, two carloads of Polands from the San Joaquin Valley did not arrive, hence the number shown was much smaller than had been anticipated.

The grand champion boar, Buster Bob, owned by Eastman Ranch, San Fernando, was one of the largest framed junior yearlings ever shown in the West, and a boar that would look good at any show. The same herd produced the junior champion

sow, Smooth Mald, a very stretchy, typy senior sow pig and a littermate to the reserve junior champion boar.

The reserve grand champion boar was President's Model, shown by H. Christiansen, Arlington, a very large, smooth, mellow boar and one of the heaviest boars in the show.

The grand champion sow was Miss Big Price, exhibited by Mrs. Anita M. Baldwin, Santa Anita. The same herd also showed the reserve grand champion, Santa Anita Orange Bud, the dam of the junior champion boar and the first and second prize junior gilts.

This was an excellent litter and would have been a strong contender at the state fair. Mrs. Viola L. Renwick, Santa Barbara, showed a litter sired by The Diplomat, that furnished lots of competition. However, they were handicapped by age, being among the youngest pigs shown.

Prof. J. I. Thompson placed the awards in a very satisfactory manner.

Poland China Awards

Exhibitors: Anita M. Baldwin, Santa Anita; Frank Boehm, Downey; H. Christiansen, Arlington Station; Chas. Wm. Cooper, Rivera; J. L. Dunlap, Pomona; J. L. Hall, Lomita; E. Avery Newton, Los Angeles; Viola L. Renwick, Santa Barbara; Bruce White, Downey; Byrum Zinn, Downey.

Aged boar—1, Christiansen on President's Model. 2, Renwick on El Profito. Senior yearling—1, Baldwin on Greenwood King.

Junior yearling—1, Eastman on Buster Bob. 2, Renwick on Mammoth Price. 3, Dunlap on Longfellow Timm. 4, Newton on Price's Longfellow.

Senior boar pig—1, Eastman on Eastman's Korver. 2, Dunlap. 3, Dunlap.

Junior boar pig—1, Baldwin. 2, Eastman. 3, Renwick on Endurance Bond. 4, Baldwin. 5, Eastman.

Aged sow—1, Baldwin on Miss Big Price. 2, Christiansen on Liberty Girl. 3, Newton on Major's Choice.

Senior yearling—1, Baldwin on Santa Anita Orange Bud. 2, Renwick on Mammoth Queen. 3, Baldwin on Miss Wonder's Price. 4, Dunlap on Miss Lady 5th. 5, Dunlap on Miss Lady 6th.

Junior yearling—1, Renwick on Miss El Profito. 2, Baldwin on I. S. C. 1 of 19. 3, Christiansen on Queen's Perfection. 4, Dunlap on Gene's Lady. 5, Christiansen on Model Dandy.

Senior sow pig—1, Eastman on Smooth Maid. 2, Dunlap. 3, Dunlap. 4, Bragg on Thompson's Choice. 5, Dunlap.

Junior sow pig—1, Baldwin. 2, Baldwin. 3, Renwick on Eagle Bond. 4, Renwick on Banner Bond. 5, Eastman.

Senior champion boar—Buster Bob; reserve, Eastman Korver.

Junior champion boar—Baldwin; reserve, Eastman Korver.

Senior champion sow—Miss Big Price; reserve, Santa Anita Orange Bud.

Junior champion sow—Smooth Model; reserve, Baldwin.

Grand champion boar—Buster Bob; reserve, Baldwin.

Grand champion sow—Miss Big Price; reserve, Smooth Maid.

Aged herd—1, Baldwin. 2, Christiansen. 3, Dunlap.

Young herd—1, Baldwin. 2, Renwick. 3, Dunlap. 4, Newton.

Herd bred by exhibitor—1, Newton. 2, Christiansen. 3, Newton.

Get of sire—1, Baldwin. 2, Renwick. 3, Dunlap.

Produce of dam—1, Baldwin. 2, Renwick. 3, Dunlap. 4, Newton.

The Hampshire Show

As usual, the Hampshire breeders of Southern California brought out one of the best, if not the best, exhibit of Hampshires shown this season. While the number of hogs shown in this department was not as large as some of the other breeds, the quality of those shown made the exhibit a very creditable one.

In the aged boar class, F. C. Fairbanks, Redlands, won first on Harvey's Choice, and first in class and senior champion on the good junior yearling, Joe.

E. Avery Newton, Los Angeles, had the first prize senior yearling, Golden Lad. Tarzana Ranch won the junior and grand championship on the outstanding senior boar pig Tarzana Prince, a pig good enough to win at any show in the country.

Conejo Ranch won reserve junior.

Tarzana Ranch won first in the aged sow class on the great sow, Floreine 2d, and was later awarded senior and grand champion on the same sow. The same firm had junior champion and reserve grand champion sow with the outstanding senior sow pig, Tarzana Princess 1st.

Fairbanks won first, second and third in the junior yearling sow class on Blossom, Chinie and Flower, three very typy sows.

Conejo Ranch won the first four places in the junior sow pig class on a remarkable litter of gilts.

C. R. Doty, Los Angeles, tied the ribbons with universal approval.

(Continued on Page 529)

150 REGISTERED HEREFORDS AT PUBLIC AUCTION

State Fair Grounds - - Sacramento, Cal.

Thursday, November 4
45---Registered Herefords---45

This is the regular fall offering of picked tops, known more popularly as the "Association Sale." Hereford breeders all over the coast have been striving constantly toward the improvement of their herds, and it is only natural to expect advancement in quality in each succeeding sale of picked cattle.

Foremost herds of the west will be represented in this sale, and the buyer who wants to add one or more extra choice animals to his herd, or the beginner who wants to start with that sort of foundation will find ample range of selection in this offering.

Sale Under Auspices of

Pacific Coast Hereford Cattle Breeders Association

J. I. Cazier, Pres., Wells, Nevada. J. A. Bunting, Sec., Mission San Jose, Calif.

Friday, November 5
Nevada Hereford Ranch

WILL SELL

55---Registered Herefords---55

The owners will endeavor to make this, their first individual public sale offering, an important event in the breed's affairs in the west, and one from which buyers will secure foundation animals upon which many splendid herds will be built. The statement that this is a rare offering, both as to breeding and individual excellence, is entirely conservative, and buyers of the better sorts should certainly find in this list such individuals as will meet their every requirement.

Beau Blanchard 76th

HARRIS STANDARD 2ND is as well bred as any bull in the United States and is a wonderful sire. Our show herd for the past three years has shown some evidence of his breeding ability, but to be fully appreciated you must see the uniform excellence of his entire get on our ranch. His get have never been defeated in the Get of Sire class.

IN THIS SALE we will sell over 30 heifers sired by him, and many of them are safe in calf to BEAU BLANCHARD 76TH. Others will be bred to ABE MISCHIEF, by Mousel's mighty Beau Mischief, and to BOCALDO 21ST, by Hazlett's Grand Champion, Bocaldo 6th.

The get of HARRIS STANDARD 2ND won first in Get of Sire class, adding another win to their string of undefeated showings.

At 1920 California State Fair, BEAU BLANCHARD 76TH was Grand Champion in the greatest Hereford Show ever staged at Sacramento, and his young son PILOT, out of a Harris Standard 2nd dam, owned and exhibited by Wm. Briggs, Dixon, was first junior bull calf and Junior Champion. Four of the first calves sired by BEAU BLANCHARD 76TH, and out of Harris Standard 2nd dams, bid well for high honors in the individual classes, and in the Get of Sire group stood second only to the get of Harris Standard 2nd. Remember that in this sale a large number of HARRIS STANDARD 2ND heifers sell bred to BEAU BLANCHARD 76TH.

At Los Angeles Live Stock Show, just closed, Beau Blanchard 76th was again Grand Champion, and his junior calf son, BLANCHARD 1ST was Junior Champion and Reserve Grand Champion.

Harris Standard 2nd

50---Registered Herefords---50

This is an offering of most popular breeding, and should particularly attract buyers of heifers, although there will also be found an attractive number of young matrons in the list.

Among the females to be offered will be found

22 DAUGHTERS OF
BOURBON COLUMBUS

eight of them out of daughters of Beau Tempter, and the balance out of daughters of Beau Donald, Rupert Donald, Perfect Donald, and Repeater 9th.

5 DAUGHTERS
OF BEAU FAIRFAX

out of dams by Beau Tempter, Erling March On Woodford 2nd, and Rupert Donald.

8 DAUGHTERS
OF DON PERFECT 10TH

out of dams by Beau Donald, Beau Tempter, Paloma's Erling, and Don Brummel.

4 DAUGHTERS
OF BEAU TEMPTER

out of dams by Rupert Donald and Columbus Busybody.

Other sires represented by daughters in the list are MR. PERFECTION, PATRICIAN 5TH, GAY LAD 31ST, DON BRUMMEL, REPEATER 9TH, and GAY LAD 44TH.

43 OF THE FEMALES

in this offering were calved in 1917 or later, a splendid group of young brood material that should make substantial profits for their new owners.

Many of these choice young females are well along with calf, others now being bred to

MAPLES LAD 137TH
788370

who is by Bonnie Brae 8th and out of a daughter of Bonnie, second dam by Beau Modest, he by Beau Brummel, third dam by Luminary a son of Lamplighter.

FARM LANDS FOR SALE

A REAL BARGAIN Why pay \$1,500 to \$2,000 per acre for improved fruit ranch in congested district when less than one-half will buy highly developed and thoroughly equipped ranch in choice location in Sacramento Valley, 50 miles from Sacramento, only 3 miles off state highway and good town on main line Southern Pacific railroad, where climatic conditions are ideal for fruit growing and where labor during harvest periods is easy to secure?

This property consists of 182 acres of loam soil with perfect drainage and irrigation facilities, 160 acres being planted to good healthy fruit stock set out by one of the best posted fruit men in the state, approximately as follows: 30 acres Fazeragoc grapes, 10 years old, 16 acres Malaga grapes, 10 years old, 5 acres Muscat grapes 10 years old, 20 acres Blenheim apricots, 9 years old, 15 acres Royal apricots 6 years old, 15 acres Hems Kirk apricots 5 years old, 23 acres almonds 7 years old, 23 acres Elberta peaches 3 years old, 10 acres Phillipp cling peaches 6 and 9 years old, 10 acres Bartlett pears 6 years old, also approximately 100 young citrus and family fruit trees.

With the property goes full equipment or large and small implements, completely adequate to care for same, including tractor, sprayer, four good work horses with harness, wagon, etc.

General improvements consist of two modern farm dwelling houses, with barns, bunk houses, etc. Also each has a good domestic well equipped with power pump. Property has creek bordering on one side, with many beautiful live oak and other trees.

Irrigation facilities are installed, consisting of deep well, equipped with modern deep well turbine pump and power unit, producing supply of water sufficient to irrigate entire acreage, also one mile of 10 inch and 12 inch diameter, well constructed underground cement pipe system with over-flow, valve controlled, outlets at tree rows.

For Drying of Crops when desired are drying grounds, sulphur sheds, etc., together with approximately 10,000 drying trays; also several thousand fruit picking boxes and necessary picking ladders, etc.

Net Earnings from this ranch in one or two more years will show 20 per cent to 40 per cent annually on invested capital.

Favorable purchase terms can be arranged on this beautiful property and if you are looking for real and unimproved value in an improved fruit ranch your inspection of this property with owner will convince you it is a bargain. Photographs on request. Box **R. W. A.**, Cultivator, Los Angeles.

62 REGISTERED
HEREFORD FEMALES 62

At Public Auction

Thursday, November 18, 1920

Some months ago the owners purchased the entire herd of registered Herefords, numbering 180 head, from Kiesel Land & Cattle Co. in Oregon, a larger herd than they care to carry, and this sale will be the medium for disposing of a part of the herd.

These cattle will be presented for sale in just thrifty condition. They are range raised and used to rustling for themselves, and should be a most useful lot of breeding females as the foundation for new herds.

LOOK AT THESE ACES!

Four of these females were born in 1913, eight in 1914, one in 1915, five in 1916, twenty-two in 1917, thirteen in 1918, eight in 1919, and there is one old cow in the lot.

Sixteen of them have calves at foot, and all the balance are either in calf or at breeding age. Many of them are in calf to BEAU BLANCHARD 37TH, son of the famous Beau Blanchard, and there are also ten daughters of this bull in the offering.

Poultry at Livestock Show

By Jean A. Koethen

THE poultry show held in connection with the Los Angeles Livestock Show the first week in October differed in three particulars from any that have preceded it, at least in recent years. First, it was held in a tent which gave ample room for coops and for the crowd of visitors which passed along its aisles in endless procession. The aisles were so wide that the visitor could not only squeeze through, examining one bird at a time, as has been the case at some shows, but he could stand back and view a string as a whole if he wished, could even, when the crowd thinned a little, get a birdseye view of a whole alley. This distinction may not seem important at first glance, but it really adds considerably to the enjoyment of a poultry "fan" at a show if he can take in a lot of birds at one glance.

Second, there was crowd enough to make one feel that the show really amounted to something. This is merely psychological, maybe, for a show is as much a show if viewed by 50 people as when enjoyed by 10,000. Nevertheless, the crowd does count. Everybody who likes good poultry came to the Livestock Show and filed through that big circus tent. The day I was there I ran onto three near neighbors in a few minutes and in another few minutes met three Orange County poultry women. The advertising value of a show which is so well attended can hardly be estimated. On my return from Exposition Park I found awaiting me a letter asking for addresses of two exhibitors, and these are no doubt only a forerunner of many more such requests.

Third, and most unusual, the leading breed in this show was not the Rhode Island Red, which takes first place numerically three times out of four, nor the Ancona, which is as often as not a good second, nor the Barred Rock, which was for many years the best loved breed, but the little ornamental bantam. There were 235 entries of these little pets, and when I say they attracted constant and most flattering attention I am making a very modest statement indeed. There were more than twice as many entries of bantams as of Reds, which numbered 115, and nearly twice as many different exhibitors, and three times as many bantams as Anconas. The list of varieties included White, Black, Buff and Partridge Cochins, Bare Neck, Silver Sebright, Black Rose Comb, Blacktailed Japanese, Mille Fleur, Barred Rock, Silkie, Speckled Sussex, Partridge Wyandotte, Black

Minorca, White Leghorn, Partridge Rock, Silver Duckwing, Red Pyle Game, Golden Sebright and Silver Sebright. The longest string of one variety was that of Buff Cochins, and these beautifully colored little creatures were like a streak of sunshine along one side of the big somber tent.

Rhode Island Whites were a splendid class. This comparatively new breed gains steadily in numbers and from being an experiment has become a standard variety, as greatly valued for its productiveness as it is admired for its beauty.

Along with the R. I. Whites must be mentioned White Wyandottes and White Rocks. The world loves a big white bird. The entries of these two varieties were not as numerous as have been seen at some shows, but the quality was there. First White Rock cock was a beauty and some of the White Wyandotte hens were wonders. White Leghorns were conspicuous for their absence, there being only seven entries. This is not strange when one considers that these birds are bred for utility rather than points and that only two or three breeders here have tried to do original work in breeding them for the show room.

Sicilian Buttercups and Black Langshans were out in better numbers than usual, and Light Brahmas were one of the strong classes. First Black Minorca cock was a fine bird, as were first R. I. Red cockerel and first Barred Rock cockerel.

Dark Cornish is a favorite breed with fanciers, and no alley claimed more careful inspection. Houdans, Campines, Andalusians, Orpingtons, Buff Minorcas and Leghorns and Silver Wyandottes were satisfactorily represented, and our old friend, the industrious little Brown Leghorn, was back in fine form. Few of these useful and beautiful little birds have been shown the last few years, possibly because they are not easy to breed true to color, and it was a pleasure to see more than a score in their coops alongside the Whites. There were a few ducks and guineas, and the showing of turkeys was exceptional, the Bronze being especially fine.

As marking a step in the right direction mention should be made of the Junior Exhibition, which, though it numbered hardly a dozen entries, showed what is being done in some of the schools. When our boys and girls are trained to know the value of pure bred stock, poultry as well as pigs and calves, we shall have more real farmers and fewer idle young men who think only of getting into some soft job and staying there.

Poultry Queries---Conducted by Jean A. Koethen

Plebeian Chicks

A neighbor and I ordered respectively 500 and 200 chicks last spring. Instead of the number ordered we received 600 and 400, but as they seemed strong and healthy we paid the bill and said nothing. I paid \$87 for 600. As they grew it appeared that they were not up to specifications. They have grey instead of yellow legs and their feathers are a sort of dirty white. Some have black feathers and red mixed in with the white. Some have black legs and their beaks are grey. The roosters at four months have only scrawny little combs, while my pure bred stock at two months had well developed combs. The broilers brought a good price, though at three months it was difficult to determine their sex. They have been well fed and are very husky, always fighting and running races, not ladylike and dignified like the other stock. Is this because they are plebeians, and do you think they will lay as well as the patricians? If you think they are poor stock, and the hatchery people have stung me, maybe I had better sell them. I am just making a start and don't want to fail in the very beginning.—Subscriber, Terra Bella.

Yes, it looks as if those chicks belonged to the proletariat, but they may prove to be better layers than the aristocrats. Their vigor is very much in their favor. Pure bred White Leg-

horn chicks do sometimes show black feathers, but the gray or slaty legs show a Minorca mixture, and from the red feathers and black legs I judge there are other stains on their purity. You must consider, however, that you paid only 14½ cents apiece for them, while first-class chicks were selling for from 18 to 25 cents, so you were not so badly stung. The thing to do is to keep the pullets and feed them as you are feeding to get the greatest number of eggs, but do not use them as breeders. Next spring buy eggs from the very best pure bred laying stock you can find. You will not need very many. I met a man last year who had paid \$30 a setting for eggs with which to improve his stock. If you already have some pure bred stock you can mate the males from the finer stock to your hens, but it will be best to keep one mating of the better stock unless they are too closely related. Then you can cull out the poor layers of this mixed lot and send them to market. If you find they are all poor layers, send them all to mar-

Make the reading of advertisements in the California Cultivator a habit.

They will broaden your knowledge of the manufacturing improvements.

ket, but there will probably be some worth keeping another year. Just see to it that they never get into the breeding pen and you will be all right. If you prefer buying chicks to high priced eggs there are plenty of reliable breeders who will sell you bred-to-day chicks for 25 cents apiece, but you will have to order immediately for spring delivery.

Gizzard Worms

My spring chickens have worms in their gizzards. The worms have eaten through the lining of the gizzard at the lower part and formed a nest. Some are an inch and a half long, and some smaller. I feed well, but the chickens are poor and droopy.—Subscriber, Fresno.

Of course they are poor and droopy with all that infestation. The round worm treatment of the University of California is the simplest, and probably as effectual as anything. I am not sure that it will reach those worm nests, but if it will not nothing will. Mix a pound of tobacco dust in 50 pounds of dry mash and keep this before them for three or four weeks, then give the plain mash again for several weeks. You can keep up this treatment, alternating plain mash with that containing tobacco for six months or longer, if necessary. Dr. Beach claims that this treatment will eradicate worms even if the birds are on infected soil, but it is much better to move them to clean ground as soon as the worms are gone.

Some Laying

I have 12 R. I. Red hens which began laying the last of January. From that time to October 1 they laid 1955 eggs, besides which three of them each hatched and raised a brood, thus being off the laying list for about eight weeks. They are now laying 45 per cent. They are confined in a yard 17 feet square on a ration of wheat and corn twice a day, broken bread once a day and bran before them at all times; green stuff twice a day; no meat or green bone. Do you think I could reasonably have looked for a better production with a different ration?—Subscriber, Pittsburg.

Theoretically, perhaps; practically, I doubt it. An average of 162 eggs for eight months is mighty good laying, far better than the average of meat fed hens are able to attain. Your free feeding of green stuff, along with the bread, which is splendid feed, has evidently kept the hens in such vigorous condition that they don't miss the extra protein.

Feather Pulling

I would like to know the name of the remedy for feather pulling. I saw it some time ago in the Cultivator, something to put in the drinking water, I think. I have some chickens about seven months old and they are stripping each other and eating the feathers.—Subscriber, Fresno.

Can any reader help us out with this remedy? It is generally considered that feather pulling is due to lack of something needed in the ration, usually protein, or to idleness, and that the only remedy is to give abundance of meat and greens, and to keep the birds occupied scratching or running. If you can let your birds out on range most of the day the vice will usually cure itself. If there is any remedy that can be given in the drinking water I should be glad to know it.

Leg Weakness in Turkeys

What is the cause of my turkeys losing the use of their legs and how can it be cured? These birds, hatched in April, have never been without housing. All summer they have had wet bran mash in the morning, with alfalfa on the side, and wheat and dry mash at night. They have a manure pile, a haystack and a melon patch to run to during the day.—Subscriber, Porterville.

Mash twice a day is pretty heavy feeding for young turkeys. They have evidently been putting on weight faster than their leg muscles developed and are now unable to carry the load. The ration you have been giving them

during the summer is about what you should begin to give them now in order to fatten them for Thanksgiving. As it is, you will have to cut down on their feed for a while and make them take more exercise. Let them have a dry mash composed of equal parts bran and rolled oats in the morning, with about 5 per cent bone meal added, and a light feeding of wheat at night, and make them range for the rest of their food till they are better. Your ration contains nothing to strengthen the bones and muscles, and it is for this purpose you should use bone meal and oats. Moist mash is too fattening to use long at a time.

Aspergillosis

A later report from the Hemet subscriber who asked advice for a hen that had trouble in breathing, states that the hen finally died and a post mortem showed growths of cheesy matter in the upper part of the lungs. This makes it plain that the trouble was not choking from some foreign substance in the throat, but aspergillosis, due to mold spores in the respiratory organs. These growths come

from spoiled or moldy feed and are quite common. As the foggy fall weather comes on it will be necessary to be increasingly careful about feeding bran or other feed that has been wet, even if it has been dried afterward. Not all hens are equally susceptible to the effects of mold, but there is no cure if they are once affected.

FOREST SERVICE WANTS MORE RANGERS

\$1,220 per year plus a bonus of \$20 each month is the entrance salary to be paid both men and women who receive appointments as forest rangers after having successfully passed the open competitive examination to be held at various California points on October 25.

The work, which is almost wholly within the mountains, requires young, active men who are fully capable of taking care of themselves under all conditions. Applicants must, therefore, be able bodied and between the ages of 21 and 40, although persons entitled to preference because of military or naval service are released from age requirements. At least a common

school education is required, and in order to successfully pass the examination an understanding of the rudiments of compass surveying, timber scaling, land laws and the livestock industry are essential. Examinations for this position will be held on the date mentioned at Alturas, Bakersfield, Bishop, Los Angeles, Nevada City, Northfork, Placerville, Quincy, Red Bluff, San Diego, Santa Barbara, Sisson, Sonora, Weaverville, Willows and Yreka. Application blanks may be secured from the Civil Service Commission, Washington, D. C., from the forest supervisor at any of the points mentioned above or from District Forester, Ferry Building, San Francisco.

Since forest rangers are required to perform, on occasion, such manual labor as fighting forest fires and building trails, telephone lines and cabins, it is probable that few, if any, women will be appointed to these positions.

Buy a Tractor as You Buy a Horse

If you were buying a horse to work on your farm, you would look for one that was strong, reliable, easy to manage, economical to keep and long lived. And, since a tractor is simply an iron horse, you should look for the same qualities in it.

But you cannot get such a tractor unless its ignition system is high grade and dependable. Poor ignition means lack of power, waste of fuel, delay, trouble and expense. Perfect ignition gives economy, power, quick work, dependability and long life to the tractor.

The most efficient ignition system for tractors is the Bosch High Tension Magneto. It gives big, full, flaming sparks in the cylinders—sparks so big and hot that they fire even low grade fuel instantly. And it gives sparks with perfect regularity—rain or shine, winter or summer—day in and day out, for years.

Three million Bosch users back up these statements. Four million will do it next year.

Gyp.: 2.85.

Bran: Kansas, 40.25.

HAY

Alfalfa Growers of California, Oct. 13:

While there was no advance in the price of alfalfa during the week, the market showed a healthy undertone and receipts were readily absorbed. This shows the great intrinsic strength of the position of alfalfa, considering the state of the money market, and still more so considering that the already demoralized market for other feed and food products again suffered additional severe declines during the week, establishing new low records for wheat, corn, oats, etc., and bringing prices still further below cost of production. So serious is the situation that

in the case of wheat the wheat growers are being urged not to sell any wheat after October 25 until the price of good wheat is \$3.00 a bushel; it is now about \$2.00, and corn, oats, etc., are quoted correspondingly low. We doubt that this measure will bring the desired result, there being a large over-production of wheat as well as corn, barley, etc., unless there is found a way to finance the exportation of the surplus to Europe, where it is all wanted, but mostly on long time credit only, and the question is who can and will "hold the bag." There were approximately 750 tons of hay of all kinds received on the Los Angeles tracks the week ending October 9, and 660 beld over as against 600 tons the week before.

HAY

Alfalfa Growers of California under date of October 12:

There were 1,565 tons received in San Francisco, the week ending October 9.
No. 1 Dairy Alfalfa.....27.00
Standard Dairy.....23.00
Stock Hay.....22.00

Under date of October 9, W. Scott says: Co. says:

Receipts past week, 1,565 tons. Contrary to expectations the hay market has

sustained its prices during the past week probably better than any other of the produce markets. In the midst of grain and feed prices going off over night at the rate of \$10 to \$12 per ton, it was expected that the hay market would show similar weakness or falling off, but although the receipts have been about the same as the previous week, prices have been, if anything, a little stronger. A rather brisk inquiry for red oat hay for interior demands has started a little current of strength in that kind of hay and a few sizeable sales are reported from the country at slightly better figures than heretofore. The rains have not been of sufficient volume or duration to make any noticeable effect upon hay prices and about all that they seem to have done is to damage a little of the alfalfa now remaining in the fields. Export trade continues along the same lines and with very light movement. Alfalfa has been a little stronger during the past week, possibly owing to a few sales of some size that have been made and possibly on account of difficulty in transportation from the shortage of cars which has interfered with the shipment of alfalfa now being pressed from the later cuttings more than it has other types of hay. If the rain is of sufficient volume to stop all pressing for a time alfalfa prices are likely to be better. Some straw has been handled in the market for feeding purposes only; the item of bedding straw which used to be such a feature here, has become an almost unknown quantity.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market in San Francisco (for prices to consumers charges of cartage, commission and handling expenses must be added according to conditions).

Citrus Markets

Los Angeles, October 13, 1920.

Valencias are nearing their finish with something over 300 cars yet to go. Market conditions are firm and all offerings are being quickly taken at around \$7.00 f. o. b. The new crop is coming on with an estimate of about 50,000 carloads, of which 20,000 will be Navels. In total tonnage the Valencias will crowd close to Navels this year. Florida growers contemplate starting moving of the new crop during November and will have large quantities in line for the Christmas trade. Owing to legal complications affecting the matter of ripeness of fruit, it is estimated Florida fruit will go forward greener than usual and in much larger quantities.

Lemon growers are now feeling more comfortable than they have for the last two years. Good fruit is commanding ready sale and at fair prices. This is doubtless due to the material shrinkage in receipts from the Mediterranean.

Shipments

Shipment of oranges to date since November 1, 1919, from Southern California, 28,322; lemons, 9,250; total, 37,572. To same date last season: Oranges, 33,641; lemons, 9,403; total, 43,044. From Central California to date this season: Oranges, 5,375; lemons, 288; total, 5,663. To same date last season: Oranges, 3,714; lemons, 251; total, 3,965. Northern California this season: Oranges, 261; lemons, 23; total, 284. To same date last season: Oranges, 244; lemons, 2; total, 246.

FRUIT GROWERS' MEETING

A meeting of fruit growers is being held this week at Riverside during the fair, arrangements for which were made by George P. Weldon of Chaffee Junior College. Professor Whitten is explaining long pruning as applied to citrus fruits and addresses by other practical horticulturists are being made.

DISTRIBUTORS OF POULTRY SUPPLIES

More poultry is produced in Los Angeles County than in any other county in California, and the poultry industry throughout the state is increasing in importance at a rapid rate. Evidence of these facts is shown in the activity of manufacturers of poultry supplies in entering this territory with branches of their eastern factories, to facilitate the handling and distribution of their prod-

ucts, so that prices may be as low as possible and deliveries made promptly. The Hoeft Company, Incorporated, of Chicago, manufacturers of Moe's poultry supplies, consisting of hovers, brooders, fountains, brood coops, feeders, egg-testers—in fact every modern metal appliance for poultry men—have opened a factory branch in Los Angeles where a complete line of Moe products will be handled. The branch will also have a large assembling department, and goods will be shipped here ready for assembling, thereby reducing the freight. The local branch will be in charge of R. O. Smith and S. H. Church. Mr. Church is well known to poultrymen as he has been identified with some of the large dealers in poultry supplies in the territory for the past eighteen years.

THE GAME

By Alice Van Leer Carrick, in Youth's Companion.

Oh, when you go a-traveling, a-traveling
on the train,
What do you do, what do you say,
What are the many games you play?
We know one; we'll show you the way.
Listen, we'll tell it again!
You take the opposite sides of the car,
Whether you're traveling near or far,
And count the animals that you see;
Sheep are Four and pigs are Three,
And Ten a bird flying over a tree,
Everything counts that's an animal,
Everything counts that's alive:
A horse is One and a cow is Two,
And a cat-in-the-window Five!

Oh, when you go a-traveling, a-traveling
all day,
What does it matter if the rain
Slips and slides down the window-pane
When you can try and try again
This wonderful game of play?
You take the opposite sides of the car,
Whether you're traveling near or far,
And count the animals that you see;
Sheep are Four and pigs are Three,
And Ten a bird flying over a tree,
Everything counts that's an animal,
Everything counts that's alive:
A horse is One and a Cow is Two,
And a cat-in-the-window Five!

ALL ABOARD FOR THE FURNITURE ISLANDS!

By Clara Peterson

THE nursery door had been locked for several days, but now it was wide open. The hall had grown quite dark but there was a blaze of electric light from the open door and the twins ran, breathless, and stood on the threshold.

"Oh! Oh! Oh!" said the two together. The walls were painted yellow and there was a low border of birds, big birds and little ones, peacocks and robins and ostriches and humming

birds. There were thin white curtains at the windows and new blue cushions on the window seat. There was a rug of palest grey with a yellow border and on it stood the four presents.

An ivory bed just big enough for twins. Across from it, a bureau with wide drawers and a shining oblong mirror. And on either side stood the dearest little rocking chair—two cozy ivory rockers.

The twins began with the left hand rocker, for there was something very wonderful about this furniture. The chair had a broad panel for its back and on the panel was a painting.

"It's Pussy Cat Mew," said Jennie softly, for she couldn't be sure that the picture was real.

"Pussy Cat Mew jumped over a coal, And in her best petticoat burnt a great hole.

Poor Pussy was weeping; she'll have no more milk

Until her best petticoat's mended with silk.

There was a painted fireplace with the bright red coal burning a hole in the carpet. And there was Pussy Cat Mew, weeping and holding out her little white ruffled skirt while old Mrs. Cat scowled and scolded. The picture was so very real that Janie drew back her finger when it had almost touched the hot coal. Jennie laughed and they tiptoed across the rug to the bureau.

"This is for the first poem in our book," said Janie.

"The hart loves the bligh wood,
The hare loves the hill;
The knight loves his bright sword,
The lady—loves her will."

An emerald forest strayed across the front of the bureau. There was a little spotted fawn peeping from the trees. There was a patch of clovers

in one corner and down among the flowers was a bunny nest—five tiny rabbits nestled together. Jennie bent her head lower to count them. There was a very steep hill and at the bottom of it, right at the bottom of the bureau, too, Auntie Bee had painted three silvery turrets.

"O dear!" said Janie.

"O dear!" said Jennie. "That must be the castle where the knight and lady live, and there wasn't room for it."

The right hand rocking chair was exactly like the other, but the painting was different.

"Daffy-down-dilly has come to town In a yellow petticoat and a green gown," said Jennie.

A great many Daffy-down-dillies had come to town and they were dancing gayly all over the ivory panel—flower maidens in golden lacy underskirts and grass green dresses.

It wasn't until the twins were in bed and mother and daddy had gone downstairs (leaving the lights burning for half an hour), that they really noticed the other picture. Auntie Bee had painted it just where it belonged—on the inside of the footboard where two little girls could lie and study it without sitting up.

"This is the very prettiest of all," murmured Jennie. "But what does it mean? I can't remember any nursery rhyme about it."

"Cunning baby camel," said Janie slowly, and then her eyelashes drooped and she was fast asleep.

A homely baby camel was standing sulkily in the midst of a flowery meadow. Beside him on a camp stool sat a queer sort of fairy busily painting a picture. She wore a straight brown suit and big glasses with black rims, but her face was as pretty as a Daffy-down-dilly's.

"I wonder what she's painting," said Jennie sleepily. "Why, I can

almost see! It looks—it looks like a kit—"

But Jennie couldn't say another word, because she too was fast asleep.

The twins had not been asleep more than five minutes when the artist fairy stretched both arms above her head and yawned. The camel bent his long neck and frowned as he said:

"Suffering Sassafras, Paintetta, have you finished?"

"O dear!" said Paintetta. "I was never so tired in my life. Wonder what I can find for lunch."

The camel was already ambling off and the fairy picked up her stool and easel and turned around. Janie and Jennie were sitting up in bed, wide eyed.

"How do you do," said Paintetta, as though she had known that they would be awake. "I am in quite a hurry for Cammie is running ahead as usual, but you may follow if you care to."

Janie looked at Jennie and Jennie stared back at her twin. They were the same as ever but where was their new bed? The twins stood hand in hand in the midst of a meadow. Buttercups and daisies grew thick under their feet and far ahead the baby camel swung along with the fairy hurrying after him.

Janie and Jennie ran through the grass. They came suddenly to the end of the meadow. Before them lay a wonderful country; three green islands swimming in a lake of heavenly blue. There was something familiar about the islands.

"Do you know," said Jennie, "I believe they are just the shape of our new furniture. The one on that side is your chair and across the lake from it is mine. See the cunning little grass rockers running down into the water! Then away up at the other end is our bureau."

Janie clapped her hands. It didn't seem a bit queer to see island furniture.

What a Piano Meant In the Old Days

Writing from San Francisco during the week of the Democratic National Convention, Correspondent H. L. Mencken sent this dispatch to his eastern paper:

I met a man in the Bohemian Club who began to tell me casually of his grandmother. This lady, an Irish woman of good birth, came to California from Ireland in 1849, by way of Panama. Imagine the journey; the long sea voyage, the infernal struggle across the Isthmus, the worse trip up the Coast, the trek inland. Well, she brought a piano with her!—got it aboard ship in Ireland, guarded it all the way to Panama, dragged it through the jungle, then shipped it again, and finally packed it to her home in the hills; I daresay many of us could find such grandmothers, going back far enough.

If possession of a good piano meant that much to our grandmothers, surely such ownership should mean no less to you. For those days had neither convenient transportation, nor convenient payment terms, nor the wonderful modern invention of the Player Piano—the piano that any one can play.

Dealers in Steinway and Other Pianos, Pianola and Duo Art Pianos, Aeolian Player Pianos, Player Rolls, Etc.

Efficient Housewives Use Keen Kutter Cutlery

"The recollection of QUALITY remains long after the PRICE is forgotten."

—E. C. Simmons
Trade Mark
Registered

Kitchen tools mean little to men—but to women—Oh! how important. For 50 years we have known of this importance. We have studied, analyzed and experimented toward one end—to make each Keen Kutter Tool and piece of cutlery, the finest ever produced.

To make Keen Kutter Paring Knives, Steels, Food Choppers and the like tools of proved working efficiency. It has been done—splendidly accomplished; for under the Keen Kutter mark the housewife will find wear resisting tools that lighten labor, save time and make happy and contented kitchens.

There's added protection in the Keen Kutter guarantee, for the purchase price is always ready to be returned even for the slightest reason.

For efficiency kitchens, use Keen Kutter Tools.

"We must be standing right on the bed island," said Jennie solemnly. "But of course we can't tell till we get away from it. This little point running into the water must be one of the legs."

They walked slowly down the point of land which was like a broad pier, and bent over to look into the dark blue water. Jennie shaded her eyes and gazed to every side, but the fairy and Cammie were gone. The twins were just beginning to wonder whether the two had fallen into the lake when a sea lion crawled out of the water. Janie and Jennie stood quite still and shivered a little, though they had often seen sea lions at the circus, but the animal didn't seem to notice that they were a bit afraid. He shook his black whiskers and looked up at them kindly.

"Fare twenty dots!" he barked. The twins didn't understand this at all until the sea lion reached down his nose and pressed a button on one side of the shiny leather harness he wore. Quick as a flash something unfolded with a jerk and there, strapped to his back, were two fine seats.

"Fare twenty dots!" barked the lion again, and smiled at them as well as he could for the whiskers.

"Fare where?" asked Jennie timidly.

"Fare anywhere," said the sea lion. "Have you seen Cammie and Paintetta?" asked Janie, who had decided not to be afraid.

"Hub!" snorted the sea lion. "They went over to Westchair Island two minutes ago. Paintetta gets on the camel's back and wishes herself across. I'd starve if they were the only passengers."

Jennie looked across the gleaming lake to where the island shoved its grassy legs into the water.

"Who lives there?" she asked.

(Continued next week.)

CHOWDERS AND SOUPS

With the cooler days we begin to think of hot soups and chowders. Here are some recipes which claim nothing new to recommend them; they are simply reminders of appetizing meals for fall weather.

Corn Chowder

One can or 3 cups of cut and scraped corn, 1 cup chopped onion, 1/2 pound salt pork, 3 cups chopped potato, 1/2 cup cream, 3 whole crackers, salt and pepper.

Cut pork into dice and put in a frying pan over fire; when brown add onion and cook five minutes; take three cups chopped, raw potatoes and parboil five minutes, then drain and add to the potatoes one can corn, the pork and onion, salt, pepper and cover with boiling water. Let cook about an hour or until tender, then add one-half cup cream and 3 whole crackers. Serve very hot. (This may be served as a soup by adding one quart milk.)

Cream of Lima Bean Soup

One cup Lima beans, 2 cups milk, pepper, 1/4 cup cream or 1 tablespoon butter.

Soak beans over night, cook until tender. Put the beans through a sieve, add the milk and seasoning; before serving add cream.

Clam-Corn Chowder

Can minced clams, half can corn. Melt two tablespoons butter or drippings, blend in two tablespoons flour, add hot water, stirring constantly to make stiff paste, then add milk sufficient to make thick and creamy. Add corn and clams and season with black pepper and salt to taste, adding bit of chopped parsley.

Potato Chowder

Pare and cut into thick slices four large potatoes. Peel, slice and brown in a tablespoon of butter one onion the size of an English walnut; add the potatoes to the hot fat and onion, then sprinkle with a teaspoon of minced parsley and just cover with boiling water sufficient to cook the potatoes tender. Do not let them become dry

and burn. When tender add one quart hot milk, half a teaspoon salt and pepper (or more to suit), then the yolks of two hard-cooked eggs mashed fine and the whites minced. If summer savory is liked, a sprinkling of it may be added during the cooking of the potatoes.

Cream of Tomato Soup

Two cups tomato, one-fourth teaspoon baking soda, one quart sweet milk, four tablespoons flour. Cook the tomatoes and the fourth of a teaspoon of soda together. This will prevent the milk from curdling. Add the milk and flour that has been rubbed to a thin paste. Season with salt, pepper and butter to taste.

Potato Soup

Pare and boil in salted water, four large potatoes and when soft, press through a sieve or ricer and return to a pint of water in which they were boiled. Add a tablespoon of shredded parsley or a teaspoon of grated onion and a pint of milk, a lump of butter, season with salt and pepper to taste. Bring slowly to a boil.

Bean and Tomato Soup

Take cold baked beans and add to them twice the quantity of cold water and let boil a few minutes. Then add the same quantity of cooked tomatoes, put through a colander as you have of beans, add an onion chopped fine. Let all cook together a few minutes, adding salt, pepper and a little mustard. Just before serving add a cup of cream. Serve with toasted bread.

Vegetable Soup

One pint white turnips cut in cubes, 1/2 pint carrots, also cut in cubes; 1 pint of potatoes, in cubes; 1 large onion, 1 clove garlic, 1 tablespoon salt, 3 tablespoons butter, 1 tablespoon sugar, 1-3 teaspoon pepper, 2 quarts water. Cut onions fine and cook slowly with the butter for half an hour. Then add boiling water and carrots and cook a half hour longer. At the end of this time add the turnips, potatoes, seasoning and cook an hour. If you have parsley, add a teaspoon ten minutes before serving. The soup is improved if some bones or trimmings of meat are added.

HOUSEHOLD QUERIES

Smoking Salmon

Will some reader of the Cultivator tell us the best way to salt and smoke salmon for home use.—Subscriber, Anderson.

A simple smoke house may be made of four walls with detachable top, dirt floor, say, 3 feet square by 7 high with door 2 by 5 with lower edge 8 inches from ground. Regulate draft by 8-inch circular galvanized iron plate, pivoted to cover 6-inch hole in door 6 inches from bottom. Six inches from top of each wall are six 1 inch holes covered with slides or plugged with corks, these to regulate outlet of smoke and steam. Remove heads, clean, split down belly and backbone so fish will spread out flat, or, if large, split into strips. Make brine of one pound salt to one gallon water. Place fish in brine skin side down overnight. Wash in fresh water for half hour, hang up to drain. Dry of surface moisture by hanging in sun and wind or in smoke house with door and vent holes open with light fire. When ready to smoke hang strips of fish, not touching, on hooks or tie on rods in smokehouse, build fire of corn cobs, drift wood or any wood but fat pine on floor, close door and draft hole. (Do not use wet wood as steam makes fish soggy.) As soon as fish begins to color open draft in door but do not allow fire to blaze. Watch through draft door and replenish fire as soon as volume of smoke falls. If door is opened when there is much fuel on fire it may blaze up and scorch fish. Have at hand a small amount of sawdust, earth or sand to scatter over flame. Continue smoking till fish are thoroughly cooked and dark brown in color. Keep in fairly cool dry place or dip in melted paraffine, being careful not to handle until cool or paraffine will crack. To remove paraffine dip fish in hot water for a few moments.

We will be glad to hear from those who have been successful in home-smoking of salmon or other fish as to methods they followed. Subscription credit will be given for all hints published.

Great Majestic

The Range with a Reputation

Delightful, consistent baking results make users of great Majestic ranges enthusiastic.

These ranges have long been renowned for their fuel-saving as well as their sure-baking qualities. Heat can be accurately controlled and utilized with utmost economy.

Moreover, Great Majestic ranges are easy to keep bright and sanitary.

All surfaces are perfectly smooth. The beauty of the burnished blue cooking tops is ever-lasting—an occasional rubbing-over with paraffine is all the care needed.

Great Majestic ranges are made in many regular and combination styles with or without legs. They are sold by leading retailers of ranges in practically every county in forty-two states.

When will Tire Waste and Extravagant Tire Buying End

Driving a car on a flat tire to the nearest garage, after a blow-out or puncture, is the most expensive form of locomotion known. Lacking a spare, the flat tire should be removed, and then proceed slowly

THERE are signs that intelligent motorists are beginning to give more thought and care to the selection of their tires.

The trouble has been that the average car owner accepted his tire losses too *meekly*—as though nothing could be done about it.

As one new make of tire after another came on the market and old tires worked up new selling features and talking points, car owners no sooner got through buying *one make of tire* than they began to look around for a *different make*.

Ready to take advantage of all this shifting of trade was the irre-

sponsible dealer, with his make-shifts, his compromises, his plausible tire experiments.

His whole attitude was one of *secrecy* and *evasion*. He believed in feeling out each individual motorist's weakness and playing to that, rather than in *helping every motorist to know more about tires*.

* * *

The motorists of this country have stood for a lot. They are beginning to *do something about it*.

Going to the good dealer—the man who is winning a greater measure of public confidence all the time—the man who believes in this principle—

That the best introduction any tire can have is the truth.

Quality is the basis on which his business is founded. And all his efforts are directed towards encouraging a wider *appreciation of quality*.

He is the man whom the United States Rubber Company is backing with all of its resources.

With all of its great and wide and long and varied experience. Longer and more varied than that of any other rubber manufacturer.

* * *

Go to the *good dealer* and get a *legitimate tire*.

For *you*, at least, tire waste will then end.

Part of the Equipment Required by Rice Growers

A string of half a hundred rice binders in the Sutter Basin which gives an idea of the number of implements required on one ranch. Each of these is handled by three horses or by tractor as needs require. This has been a discouraging reason for rice producers. The price is now exceptionally low but California is still a great rice producing state. But it cannot continue as a rice producing state if Oriental grown rice is to be received at our ports as cordially as it has during the past few months. Photo by McCurry.

Depend on him

You "scratch" the SOIL to grow good crops!

Make your BALLOT count for California.

to fight for the rights of ranch and farm

New attacks are now launched in the East against the agricultural interests of California. Now, of all times, the experienced leadership in Washington of Senator Phelan is needed. His fighting record for California's rights calls for no idle promises or platform patter. Senator Phelan—none other—is best fitted to stop prosecution and persecution of your agricultural interests.

Senator Phelan worked and voted in the Senate for legislation favoring farmers' co-operative organizations. He is progressive in thought and action. In the face of a nation-wide demand, he secured priority orders for tin plate shipments to California to meet the home needs of our canneries. His vigorous protests challenged increase of freight rates on cantaloupes and vegetables. The Department of Agriculture acted on his demand to combat the boll weevil in Imperial Valley, and San Joaquin Valley cotton was saved from attack thereby.

Senator Phelan is a recognized champion of the Farm Loan Law. He secured for California a big share in that law's benefits. He is a strong advocate of a protective tariff on California rice and beans, as a barrier against Oriental importations. G. H. Hecke, Director of Agriculture for California, wrote to him:

"Your efforts in Congress are appreciated by those at home. I know those interests recognize the value of your efforts toward safe-guarding the agricultural development of the State."

Keep California White

Re-elect—

James D. Phelan
U. S. Senator

When huge losses threatened California fruit and vegetable growers because of car shortage, Senator Phelan won his fight for priority purchase of refrigerator cars in expending the Nation's \$75,000,000 appropriation for freight equipment. Thus, he curtailed heavy losses at home. He spoke and voted to raise the duty on lemons because he believed in protecting California growers against imported lemons.

Senator Phelan is a member of the Rice Growers Association and the California Prune and Apricot Growers, Inc. He supervises the operation of his own properties and thus has first-hand knowledge of agricultural problems. He will continue to urge reforestation of the Sierra Nevadas so as to provide for greater forest protection and better water storage.

Wylie M. Giffen, President of the California Associated Raisin Co., commended Senator Phelan for his stand in behalf of the raisin growers, as follows:

"Thank you for the splendid telegram that you sent to the Attorney General. It is one of the finest things published since this agitation came up. It stated the exact truth. The raisin growers of California are immensely pleased with your action. When I express to you my own thanks, I can also speak for the 12,000 raisin growers in this State."

James D. Phelan is determined to keep California white. Here is his challenge against the silent invasion:

"On behalf of California, I will invoke the right of eminent domain, if necessary, by winning an extension of the Durham Colonization Plan and thus restore the lands of California to white people."

You can't turn back Japanese immigration if you turn your back on James D. Phelan. Should you fail to re-elect him, the Nation will take it as a repudiation of California's demand for Japanese exclusion.

One Dollar Yearly

Southern California Fair

By Cultivator Staff

WITH around 10,000 folks marching through the gates daily the management of the Southern California fair just closed at Riverside feels highly gratified at its success. The opening day found a "norther" lending of its discomfort and affecting somewhat the attendance, but it passed within a day or two and practically the entire fair was given typical Riverside weather.

Plainly, the fair grounds are too small. Almost every inch was covered with tents filled with exhibits or with concessions. The association needs not only more room but rather better housing. The arts and sciences building is still the old time barn which was on the ranch prior to its use as fair grounds. This affords good shelter for the exhibits but is not particularly attractive. Agriculture and horticulture in one large tent and the mechanics and merchants' exhibit in another were well arranged, and the placing of the exhibits was generally praised. The track events were sufficient attraction to fill the grandstand every afternoon. The grandstand, by the way, has a largely increased capacity.

The livestock exhibit was declared by far the finest ever made in Riverside and equal to some of the largest events on the coast. This will be touched by Mr. Klein at greater length below.

The exhibit of trucks was, we believe, fully equal to that made at the state fair or at the recent tractor and implement show in Los Angeles. There were dozens of standard makes of trucks, and this was, perhaps, with good reason, for citrus producing California is using an immense number. The tractor show was most complete with nearly every tractor in use in California orchards and fields competing for the opportunity of showing itself in this center of fruit production.

* * *

Field and Orchard

During a quiet canvass of the agricultural pavilion to note the most prominent features of the many fine exhibits we found the following especially worthy of comment: The North Side community of Riverside had a display of Nancy Hall sweet potatoes that were so large, smooth and of such deep rich yellow that they appeared almost good enough to eat in a raw state. The Sweet Spanish onions also were of unusual high grade, while corn was a close third. A good general agricultural range finished filling a large booth in great variety.

Beaumont's major display was of apples, and some apples, too, the Delicious fully upholding its distinctive name. The people of that section are feeling quite jubilant at present, as they recently voted bonds to purchase their own water supply and service. Banning had a very showy box display of dried fruits and nuts, nine sorts of the former and nine varieties of almonds, nearly the entire exhibit coming from the ranch of M. French Gilman. Hemet showed a great variety of canned fruits and the greatest variety of exhibits from one farm, that of the Sierra Vista Ranch.

Corona, usually to the fore with lemon displays, forsook the beaten

track for once and exhibited an unusual variety of general farm products for an exclusive citrus section, the most varied yet shown by that community at any fair. The Morena-Armada district specialized on grains as, through lack of water development, orchards are few, though the citrus and other products shown were of high grade. An increasing supply of the "wet stuff" is being uncovered in the hills, and orchards and irrigated crops are being extended in area. Arlington Heights displayed general farm crops, but all classes of fruits were in great variety.

The San Diego County farm bureau had almost a full sized replica of the old Estudillo ranch house, Ramona's marriage place, that attracted a great deal of attention. The Armstrong Nurseries of Ontario had the only commercial plant exhibit. San Bernardino

bear, said bear allying himself with honey at every opportunity as his preferred food, a preference luckily almost unbearable in this region. The Nuevo farm center's display ranged from alfalfa to cotton and down the alphabet of farm products. Of the newer cotton districts Perris had the larger lot, for cotton acreage each year heavily increases and the town is rejoicing over the possession of a new gin (cotton gin). Los Angeles, "The Billion Dollar County," contented itself with a panoramic scene, bordered with statistical tables of its immense agricultural output. The cooperative canners of the California Growers Association had the largest exhibit of canned goods. Fresno County had a typical display, with which it wins so many blue ribbons one grand feature being the largest grape show at the fair—18 varieties

A Couple of Educational Scenes at Southern California Fair at Riverside

The picture on the left was taken at a quiet moment in one of the booths, of which there were a vast number on the grounds, where chances were sold to kiddies and others to secure one of the warm baby dolls. Unfortunately all of the places were not as quiet nor as lacking in business at the moment the photograph was taken. The picture on the right is a scene down implement, truck and tractor row. The showing of implements and farm power equipment was really remarkable, far more so than it is possible to show in a photograph, with the display arranged along one long avenue.

County had a display of which it may well be proud. There were no commercial packs, all home ranch exhibits, filling more space than any other in the pavilion. More than 200 varieties of fruits and vegetables were shown and 182 sorts of canned, glassed and package products. The "finish" was a pumpkin of more than 100 pounds weight.

Riverside County, being at home and the hostess, and showing so many district exhibits, had to be a little modest and content herself with a very full general display of farm and orchard products. Orange County had every possible product of the soil from cool cucumbers to pungent peppers, being noted at every fair for the great variety shown, ranging through the alphabet from avocados to yams.

The San Jacinto Valley had the most alfalfa and grasses of any district. One root of Sudan grass, from the J. C. Cramer ranch, was crowned with 212 stalks five feet high, believed to be the highest number yet found. The A. L. Ellis Orchard Company, Beaumont, had a large and varied display and the Sunsweet brand of canned fruits from San Jose made a neat and tasty exhibit.

The Riverside County Beekeepers Club had everything in the apiary and allied lines from a live bee to a live

in full sized boxes. Elsinore had a range of farm products from A to Z, alfalfa to zea (corn). The Jurupa farm center, including West Riverside and Glen Avon, had the full list of farm produce, finished with a floral display. The Palo Verde Valley booth was nearly all cotton, as might be expected, though other soil products were shown, and the Coachella Valley booth had still more of cotton, in many forms and conditions, topped by the world's most luscious dates. The state department of agriculture had a large and very attractive booth filled with material of practical educational interest and value. The finish of the huge tent was a radio station and camp of the federal air service co-operating with the forest service in the detection and suppression of forest fires.

* * *

THE FAIR A GREAT SUCCESS

By Jack Klein

With every building and tent crowded to overflowing with exhibits of all kinds and standing room only available for the spectators, the Southern California fair at Riverside has reached a point in its career where a general expansion in all departments has become necessary.

The steady growth of this fair has been very gratifying and this year,

under the directorship of J. E. Wherrel as president and W. W. Van Pelt as secretary, the jump has been phenomenal. Spectators present who have visited some of the district fairs of the East, as well as the various other fairs of California, compare it very favorably with any that have been held heretofore.

One of the big features of the Southern California fair has always been the community and county exhibits of grains and fruits. This year San Bernardino County, with an exhibit crowding 90 feet of space in the agricultural tent, repeated its success of last year and won the \$500 prize. Fresno County, with a beautiful exhibit of fruit and grapes, was second and Orange County third.

As usual, the Sherman Indian School was present with an exhibit showing its activities, and the wounded soldiers from the hospital at Arrowhead showed some remarkable examples of work done in connection with its work in vocational therapy.

In the livestock departments the remodeled and newly constructed sheds were overcrowded with the finest an-

imals of all breeds. Many of the prize winners from the Los Angeles Livestock Show and the state fair were present, and while the numbers were not so great as in the former shows, the quality was just as good. The results of weeks of training in the show ring were very noticeable in the handling of the animals. A great many exhibitors neglect to fit their animals for the early shows and the improvement in these herds showed very plainly.

Beef Classes

The beef cattle division was the smallest in the show, but some of the best ones were there. In the Aberdeen Angus class Congden and Battles of Yakima, Washington, repeated their success of the Los Angeles show and carried off most of the firsts. The Lilac Ranch of Escondido cut in on one or two places, and in the senior heifer calf class won first and second. It was the first appearance of Angus at the Southern California fair and much interest in the breed was shown by the spectators.

The Imperial Herefords, owned by Romie C. Jacks of the Salinas Valley, were the only representatives of that breed but they made most favorable showing. Woodford 34th was grand champion bull and Bocaldo Beauty, the

(Continued on Page 550.)

Heavy rainfall has delayed rice harvesting.

A milk testers' short course is being given at the university farm at Davis.

A boys Holstein calf club has been organized at Galt, Sacramento County.

Owing to warm weather in August the bean crop of Sutter County is very light.

Local farm centers of Sonoma County are discussing liming and cover crops.

The Almond Growers Exchange has named opening prices lower than last year's.

The Sperry Flour Company is continuing its "More and Better Wheat" campaign.

Prospects are for about 400 carloads of artichokes in the San Mateo-Ocean Shore district.

Sultan Mayflower, famous Short-horn bull at the University Farm at Davis, is dead.

The Tehama County farm bureau is planning a membership drive. The goal is 1,000 members.

The California Prune and Apricot Growers Inc. is forming a second pool of prunes of non-members.

California's wool clip is estimated at 12,000,000 pounds of which about only one-eighth has been sold.

The Sutter Basin Company has started work on the subdivision into small farms of a 50,000 acre tract.

Siskiyou County had an exceptionally large exhibit of livestock at the county fair held last week at Yreka.

The Sonoma County fair association is planning to hold auto races on the fair grounds at Sonoma Thanksgiving Day.

A silo building demonstration was recently given by the Sacramento County farm bureau on a dairy farm at Elk Grove.

Veterinary Inspector Hanna of the state division of animal industry is in Sonoma County looking into the sheep scab situation.

Glenn County is in need of a deputy county horticultural commissioner. Examination of candidates will soon be held at Orland.

Farmers of drainage district 833 in Butte County have decided to take up again the irrigation project which was turned down a year ago.

The university farm at Davis has recently shipped pure bred Toggenhurg goats to the agricultural experiment station of Hawaii.

Directors of the Sonoma County fair association have decided to increase capital stock to \$200,000 and to purchase fair grounds.

The experienced buttermakers' short course at the university farm, Davis, begins October 25. Buttermaking and ice cream making will be studied the first week.

Meetings of the Tehama County farm bureau will be held at Richfield October 18; Corning, 21; Los Molinos, 25; Proberta, 27; Liberal, 28; Manton, 29; Bowman, 30.

Experiments conducted for the past six years by the state college of agriculture indicate that five acre feet of irrigation water annually is sufficient for growing a rice crop on most of the Sacramento Valley soils.

Central California

The raisin output of this state this year is about 175,000 tons.

An unusually fine exhibit of figs was shown at the Madera County fair.

Today, October 16, Bakersfield is holding its first annual cotton carnival.

Canneries on Monterey Bay have been running at full capacity on a heavy catch of sardines.

The Tulare County board of supervisors has called for bids on the building of several mountain roads.

The Tulare Cooperative Poultry Association will pay its members five cents each for their September eggs.

Tulare County farm bureaus are protesting against another increase in power rates asked by the Edison Company.

The agricultural legislative committee has been asked to consider the need of a law to standardize organic fertilizers.

"Shipping of green grapes has had a depressing effect on the Eastern market," says Inspector Weishaar of the state department of agriculture.

Petition for the formation of the West Joaquin Irrigation District has been presented to the supervisors of Merced County and public hearing will soon be held.

Plans are being outlined for reclamation of a large tract on the Tejon Ranch south of Bakersfield by impounding waters of Tejon Creek and Lake Castaic.

Dr. W. L. Howard of the deciduous experiment station at Mountain View, Santa Clara County, announces that he has discovered a satisfactory treatment for brown rot of apricots.

The peach houses of the California Peach and Fig Growers are being cleared to handle the 1920 crop of figs. The association will not be ready to receive figs until November 15.

The Monterey County farm bureau has endorsed the Greenfield Irrigation district project. The Stanislaus County Farmers Union will hold its quarterly meeting at Oakdale October 29.

The California Farm Bureau Egg Laying Contest will open November 1. Entries are limited to 100 breeders. The contest is under direct supervision of the state college of agriculture.

A number of Stanislaus County fig growers attended a meeting recently held in Fresno by the California Peach and Fig Growers Association. The fig men are trying to find some way to hold their crops for better prices.

Stanislaus and Merced Counties are joining in a monster farm bureau picnic to be held October 25. Madera County may join in. It is planned to hold the picnic on the Merced River a few miles from the Delhi Colony.

Manager Niswander of the Peach and Fig Growers says that fig bread has been a winner on the local market and he anticipates that it will meet with wide demand. The association expects to begin manufacture of fig paste, jelly and other preparations.

At the last meeting of the Tulare County farm bureau a resolution was passed protesting to the state water commission against granting to Los Angeles power sites on rivers tributary to the San Joaquin. A delegation was present from the Kings County farm bureau.

Southern California

Palo Verde Valley of Riverside County has nine cotton gins in operation.

The Almond Growers Association at Banning estimates its crop at 150 tons.

Imperial Valley farmers are investigating possibilities of sugar beet culture.

The cracking plant of the Santa Ana Walnut Growers Association opened October 18.

There was a big showing of milk goats at the Southern California fair at Riverside.

San Diego County honey crop is estimated by the Beekeepers Exchange at 50 carloads.

Practically all sugar beet fields in the Talhert section of Orange County are now cleaned up.

Turkey buyers are busy in the Imperial Valley. They are offering 43 cents for toms and 41 for hens.

The Walnut Growers Association has named prices on the 1920 crop of 30 per cent below previous year's prices.

The Orange County farm bureau will hold its second annual institute at Anaheim the latter part of this month.

San Luis Obispo County will soon hold examination of candidates for deputy county horticultural commissioner.

The Irwindale Citrus Association, Los Angeles County, made net return for Navels to grower members of \$3.03 per box.

Experiments with sulphur added to the soil of wheat and bean fields in Ventura County are reported to have shown very satisfactory returns.

Secretary Webber of the California Walnut Growers Association says that the walnut crop this year will bring to growers from \$10,000,000 to \$13,000,000.

Beaumont, Riverside County, observed October 13 as Apple Day. There was a large exhibit of apples which were later taken to the Riverside fair.

The home demonstration department of the Riverside County farm bureau is giving daily demonstrations in poultry raising at the fair now being held at Riverside.

It is reported that Los Angeles banks have joined in an arrangement to finance the cotton crop of California, Arizona and New Mexico to the extent of \$2,500,000.

Local meetings of the Los Angeles County farm bureau will be held at Burbank, October 25; Little Rock, 26; Del Sur, 27; Owensmouth and Roosevelt 28; Tierra Bonita, 29.

Farmers of the Garden Grove district of Orange County have been very successful with their pimientos this season. It is estimated that they will ship out over 2,000,000 pounds.

Local meetings of Los Angeles County farm bureau will be held at Downey, Glendora and Hynes, November 1; Alhambra, Moneta, 2; Zelzah, 3; Lankershim, 4; Whittier, San Fernando, 5.

Prof. Bioletti of the state university will be in Riverside County the first two weeks in December arranging for demonstration vineyards in various sections. Demonstration vineyards are already established in Fresno, Kern and Merced Counties.

The Coast and General

Colorado is quarantining sections in the state which show infestation of alfalfa weevil.

An infestation of the European corn borer has been located in southern Ontario, Canada.

Continued dry weather on the Arizona ranges has seriously depleted supply of forage.

Farmers of Apache and Navajo Counties, Arizona, are harvesting a bumper crop of potatoes.

Roundups are in progress in the Nogales section of Arizona and condition of cattle is reported as generally good.

Round-ups are in progress over a considerable portion of Arizona and much of the beef is found to be in prime condition.

A government sale of town lots in the Parker, Arizona, town site is to be held November 6. The minimum price is ten dollars.

The Pacific International Livestock Show will be held in Portland, Oregon, November 15-19. Many entries have been made from California.

Sweet potatoes have been produced on the state hospital farm in the Salt River Valley of Arizona that weigh eight and a half pounds each.

Mesa, second largest town of the Salt River Valley of Arizona has a population of 3,036 according to announcement of the census bureau.

Cash prizes amounting to \$10,000 will be distributed at the International Grain and Hay Show to be held at Chicago, November 27-December 4.

The cotton crop of Egypt for 1920-21 is estimated at over a million bales. This is said to be the largest in the history of the Egyptian cotton industry.

Utah reports bright weather favorable to harvesting in sugar beet and potato fields but great need of rain in the grain country and on the stock ranges.

The conference of stockmen of the 12 Western states suggested by the California Cattlemen's Association will probably be held in Salt Lake City early in December.

A modern packing plant has been completed near Phoenix. Dr. S. A. King is the government inspector in charge. The capacity of the plant is 300 steers, 1,000 hogs and 1,000 sheep daily.

Several hundred tons of white beans stored at Ensenada, Lower California, because the owners refused to pay the export duty imposed by the Cantu government are said to be on their way by boat to San Diego.

Grapefruit shipments from the Salt River Valley began early in October and orange shipments are expected to begin about the middle of the month. The grapefruit crop is expected to be larger than last year, while the orange crop may be smaller, but the quality is expected to be considerably better. Both are earlier than common.

By a recent ruling of the Salt River Valley, Arizona, Water Users Association, waste and flood waters are to be sold to a large plantation, which depends upon pumped water. This will result in considerable revenue to the association from a source which hitherto has been wasted, and will also result in a saving to the owners of the plantation.

Good Fiction; Poor Horticulture

By C. B. Messenger

NCE upon a time, at least 30 years ago, out on the eastern edge of Los Angeles County, in the orchard of Jim Harvey where we were working at that time for a dollar six bits for ten hours, came an agent. He was selling an entirely new product. It was before the days of fumigation and it was during the days when spraying was being tested to the limit to handle some of California's worst pests. This agent had a remedy which would set aside all need for future spraying—simply bore to the heart of the tree, plug the hole with compound, at a cost, if we remember rightly, of two bits per tree—and presto! the sap of the tree would be poisoned and every living pest, whether of insect or fungus life, would be destroyed.

Jim Harvey has long since passed from earthly orchards, but we recall well the twinkle in his eye as he remarked: "Stranger, your remedy was tried out many years ago in my old back East country. It's a fake."

However, the agent insisted on educating as to the real value of "plugging" the tree with his compound: "You know it poisons the sap so that nothing whatever can live." Jim replied: "Yes, I suppose on the same principle you would give a dose of strychnine to a man who had lice on his head in order to kill the lice."

Many years later, in fact, only four or five years ago, the same method of control was revived in California, and this time in a more orderly way. It was reported from a professor in Stanford University that he had tried, not a compound, but simply cyanide of potassium, inserting in a hole bored to the heart of the tree. He had made careful observations for some months of the effect of this treatment and he felt certain beneficial results were observable. Fruit growers, as a rule, were skeptical, and since we have heard no further use of this suggestion from Stanford University we take it it has been abandoned entirely.

Now comes the Antipodes. The Fruit World of Australasia in its issue of May 1 announces: "Considerable interest has been aroused by announcement in the New South Wales press detailing the methods by which woolly aphis, black aphis, codlin moth, Indian wax scales and root borer have been eradicated by means of injecting a fluid into the sap of trees. The discoverer is Mr. L. J. Smith of West Maitland, N. S. W."

However, after describing one or two most successful tests the Fruit World adds: "While waiting for further tests growers will meantime continue with their good friend, the spray pump."

Also, from Tasmania the Fruit Grower comes to our desk in its issue of the same date as that of the Fruit World and rather cautiously gives out this information.

"Rather dubiously, we fancy, have most Tasmanian orchardists heard about the new idea for killing fruit tree pests by an injection method. The thing was mooted many years ago in Huon and after some rather worse than disappointing results was quite naturally rejected. But that is not to say there is nothing in the idea if a compound can be discovered innocuous to the trees while fatal to their unwelcome guests. The story of this latest discovery, though open to

the usually fatal objection of being much too good to be true, is really quite readable and even somewhat convincing, as lately given to readers of the reputable daily, the Sydney Morning Herald. Most certainly there is plenty of warrant seeking further information about the new system and the institution of scientifically planned trials among Tasmanian orchards upon infested trees. As these trials to be thoroughly convincing must be conducted in many localities and through more than one season, it might be unwise for fruit growers to all rush their spray pumps into the auction marts at once. What if, after a course of injections, the tree itself were to give out? What if the quality of the fruit were in some way seriously deteriorated by the poisonous state of the sap that nourished it? The paper referred to said:

"The greatest drawback to fruit growing is the ceaseless toll which insect pests impose upon the trees. Woolly aphis and codlin moth on the apple, black aphis, fruit fly and tip moth on the peaches, and scales—brown, olive, red, Indian wax and others—on the citrus, to mention but a few of the growers' numberless enemies, are an ever present reminder that only by eternal vigilance can the fruit be retained in a suitable condition for human use. For all these pests the spray pump and the fumigating tent are offered as means of eradication."

"By boring a hole, say, half an inch in diameter and three or four inches deep into the trunk of the infested tree and inserting a suitable quantity of a specific, which is not in itself a human poison, in 48 hours there are evidences that the sap, even to the farthest terminal tip, has been affected. In a few weeks the parasites are killed without apparently checking the health or bearing capacity of the tree. On the other hand, the evidence so far adduced indicates that in most cases the trees have made a marked advance in growth as compared with untreated ones, possibly due to the removal of the handicap of pests which have robbed them of their sap."

After giving the results of nominal experiments the Fruit Grower asks for caution, however, adds: "If even one-tenth of the probabilities are realized the investigation will be well worth while."

But will they? Why mutilate a tree?

Under the title, "How to Doctor a Sick Tree," the Literary Digest touches upon recent investigations in effort to control chestnut tree blight. Dr. Caroline Rumbold, pathologist of the United States bureau of plant industry, has been making investigations and has reported through the American Forest Magazine. This is liberally quoted by the Literary Digest.

"Where all conditions were right it was possible to destroy the bacteria," Dr. Rumbold reports.

Many holes were made through the bark, this necessarily underneath the solution, for if air enters it is found that the air bubbles collect and prevent the solution being absorbed. Dr. Rumbold proceeds to give historical data as to this method of disease control. She says:

"The usual method of combating tree diseases is through the external application of sprays and fertilizers or by cutting out and burning diseased parts or entire trees. Many parasitic fungi grow so deeply underneath the bark of a tree that any external treatment is ineffective. This is the case with chestnut blight, or the chestnut bark disease, as it is more properly called. . . . In 1911 Pennsylvania appointed a special commission to conduct scientific investigations to determine the cause of chestnut blight and at the same time immediately to attack the epidemic by every means that seemed to afford any possibility of checking or delaying it. In connection with other lines of experimental work carried on by this commission the writer was employed to investigate the possibility of controlling the disease by injecting chemical solutions into chestnut trees. In 1913 the Pennsylvania chestnut tree blight commission advised the governor to discontinue its work because the blight had advanced too far into the state to make control practicable with the appropriation available at that time. During the next two years the writer continued the injection experiments under the direction of the bureau of plant industry."

"The problem has been to find a chemical agent which would kill the fungus that causes the blight, when a solution was introduced into a tree. The first difficulty encountered was in getting the tree thoroughly injected with any kind of liquid. The sap of a tree does not circulate like the blood of an animal. The wood of a tree contains numerous vessels or tubelike cells through which the crude sap is conducted to the leaves to be manufactured into food which returns to the roots and other living parts through the inner bark. A substance in solution follows a vertical path up the tree through those vessels in the sap wood, that are close to the place of injection. It can also descend through those vessels, but in all of this there is lacking that persistent passing and return of a stream, such as the blood stream, which constantly bathes the cells of the animal body. This path in the tree through which the injected solution passes usually is but little wider than the hole through which it is injected. Besides this, the walls of the tubular cells act like blotting paper, with the result that the farther the solution passes from the point of injection the weaker it becomes. So in order to inject a tree evenly on all sides it is necessary to make a number of injections on different sides of the trunk and even on the limbs. This means that many quarts of a very dilute chemical solution must be put into a tree if the chemical is to reach all portions of the tree. Were one to use only a small amount of concentrated solution it would kill the cells of the tree near the injection hole and would not reach other parts. This is one of the reasons why boring a hole in the trunk and filling it with strong chemical in either solid or liquid form is not likely to benefit a tree."

"The idea of introducing chemical substances into plants is more than two centuries old. The first report on tree injection for purposes of medication was published by a Russian scientist in 1894. This was followed by scattered work in America, France, Germany and Russia. Some successful results were reported, but in the

main the effect of injected solutions was not beneficial or the results were inconclusive. The most practical method was contained in the Russian publications, and the Russian method of introducing solutions was used in the beginning of the chestnut experiments. Very soon, however, an easier and less expensive method was developed in which the apparatus could be quickly adjusted to the trunk and left for 12 hours or more without further attention. On small trees a glass container holding the solution to be injected was hung on a branch of the tree. The solution was led to the point of injection by a rubber tube in the end of which was a piece of small glass tubing which was inserted into the injection hole. The glass tube was held in place by means of a perforated rubber cork which in turn was pressed tightly against the tree trunk by a clamp, thus preventing leakage.

"It was found that all kinds of chemicals in solution could be introduced into the trunks, provided there was sufficient transpiration from the leaves to keep the sap moving. The transpiration was greatest in the case of chestnut trees when they were in full leaf and the day was sunshiny, dry, and a breeze was blowing. On cold, rainy days the trees took up very little of the injected solutions. The season of the year caused a great variation in the amount of solution absorbed by a tree and also as to the part of the tree where the injected chemical went. For instance, if a lithium solution was injected in the autumn when the nuts were ripening a large amount of lithium collected in the fruits and in the ends of the fruiting branches. In the early spring when the leaves were unfolding and growing the lithium spread through the tree and less of the chemical reached the leaves. In Pennsylvania June was the best month for injection so far as the rate of intake was concerned; then July, May, August, September, October and April. The rate of intake varied more in April, May and June than in the summer and autumn months. . . . The average amount of solution absorbed through a single injection hole by an orchard chestnut tree 15 feet high and with a wide, rounded top ranged from one-fourth pint per day in April to three-fifths pint per day in June. But there are records of three and nearly four quarts of solution passing through an injection hole one-fourth inch in diameter in 20 hours. Chemical solutions with very few exceptions were absorbed more readily than the pure water. Also the more concentrated the solutions of chemicals the more rapidly they were absorbed. In several cases lithium injected into the trunk could be detected ten hours later in the leaves of branches at the top of the tree. Fifty-six organic and inorganic substances in solution were injected. The trees used in the experiments were orchard trees, for the most part Paragon scions grafted on native chestnut stock, but some trees growing under forest conditions were also injected."

"The best results of these experiments indicate that there is a large field for further research on the possibility of finding a cure by the injection method for chestnut blight and similar parasitic fungi that grow beneath the bark of trees."

"The subject is intensely interesting and will undoubtedly be further explored in the future. In the meantime owners of chestnut and other valuable shade trees should know that itinerant 'tree doctors,' who claim wonderful curative powers for mysterious substances inserted into trees are not likely to have been successful in achieving that which years of careful scientific research have failed to produce. This statement is not intended to reflect on trained men who are conducting legitimate tree surgery operations, but is directed against those 'quacks' who prey on the ignorance of shade tree owners by selling worthless 'remedies' at fabulous prices. Such persons not only get their money through fraudulent representations but frequently cause death or serious injury to a valuable tree."

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

EDITORIALETTES

We believe in the initiative and referendum. They offer opportunity to an intelligent electorate to determine its own manner of government. In California the system is being given a severe test. There are 20 measures before the voters for decision on Tuesday, November 2. Intelligent decision on these measures calls for weeks or months of study. The ten days intervening offer no fair opportunity. However, as yet, the text of the proposed amendments and statutes with arguments respecting the same is not in the hands of the voters.

This text fills nearly 60 pages of small type and the spare time offered most voters will not be sufficient to even read all these amendments. The Cultivator helps a bit by giving merely the titles and the exceedingly short statement exactly as it will appear on the ballot, excepting that the Yes and No blanks have been omitted. This may give advance information merely as to what is coming and enable the voter to decide which ones he will inform himself on as soon as the text of the amendments and proposed statutes is in his hand. These titles and the few words given are not sufficient for a clear understanding, for the information there to be found is altogether too fragmentary. For instance, Number 7, a quick reading of which, as it will appear on the ballot, will probably induce an affirmative vote. However, if one will note closely he may find "experimental, physiological investigation" may be construed so drastically that even experimental feeding of animals at the university farm may be prevented. At least this warning has been given by the University of California.

MANNER IN WHICH PROPOSED CONSTITUTIONAL AMENDMENTS AND OTHER MEASURES WILL BE DESIGNATED AND APPEAR ON THE BALLOT

1—ALIEN LAND LAW. Initiative act. Permits acquisition and transfer of real property by aliens eligible to citizenship, to same extent as citizens except as otherwise provided by law; permits other aliens, and companies, associations and corporations in which they hold majority interest, to acquire and transfer real property only as prescribed by treaty, but prohibiting appointment thereof as guardians of estates of minors consisting wholly or partially of real property or shares in such corporations; provides for escheats in certain cases; requires reports of property holdings to facilitate enforcement of act; prescribes penalties and repeals conflicting acts.

2—PROHIBITION ENFORCEMENT ACT. Submitted to electors by referendum. Defines intoxicating liquor as that containing over one-half of one per cent of alcohol; with certain exceptions relating to religious, medicinal and home use, prohibits the manufacture, possession, receiving, serving, gift and transportation thereof, and also the advertising and soliciting the sale thereof, for beverage purposes; declares nothing therein shall authorize anything prohibited by any act of Congress, nor limit the power of any city or county to prohibit the manufacture and sale of such liquor; regulates the dealing in intoxicating liquor for nonbeverage purposes; and prescribes penalties.

3—SALARIES OF JUSTICES. Initiative measure amending Section 17 of Article VI of Constitution. Increases the salary of each Justice of the Supreme Court from \$8,000 a year to \$10,000 a year, and of each Justice of the District Courts of Appeal from \$7,000 a year to \$9,000 a year.

4—INITIATIVE. Initiative measure amending Article IV, Section 1 of Constitution. Inserts proviso therein increasing the number of signatures of qualified electors necessary to initiative petition presented to Secretary of State under that section when such petition relates to assessment or collection of taxes, or provides for modification or repeal of this proviso; requires such number to be twenty-five per cent of all votes cast for all gubernatorial candidates at last preceding election at which Governor was elected, instead of eight per cent thereof as now required. Makes no other substantial change in section.

5—CHIROPRACTIC. Initiative act. Creates Board of Chiropractic Examiners appointed by Governor and paid from receipts under act; prescribes powers and duties thereof and prohibits practice of chiropractic without license therefrom; regulates issuance of such licenses; requires licensees to observe state and municipal regulations relating to control of contagious and infectious diseases and authorizes them to sign birth and death certificates and use natural agencies and manual and mechanical means and manipulations as auxiliaries in their practice; declares other methods of healing, and chiropractors licensed under other acts, not affected hereby; prescribes penalties and repeals all conflicting legislation.

6—PROHIBITING COMPULSORY VACCINATION. Initiative measure adding Section 15 to Article IX of Constitution. Declares that no form of vaccination, inoculation or other medication shall hereafter be made a condition for admission to or attendance in any public school, college, university or other educational institution in this state, or for the employment of any person in any public office; and that the provisions of this section shall not be controlled or limited by any other provision of the Constitution.

7—PROHIBITING VIVISECTION. Initiative act. Declares it unlawful to dissect, vivisection or torture any living person or living animal, or aid or abet therein for purpose of experimental physiological or experimental pathological investigation in or at any university, school, society, college, hospital, institution or other place within California; declares nothing in act shall prohibit the dissection or vivisection, or aiding or abetting therein, of any living person when done with latter's consent, or prohibit surgical operations upon or rendering medical aid in case of physical injury, deformity or sickness of any person or animal; provides penalties and repeals conflicting acts.

8—POISON ACT. Submitted to electors by referendum. Amends act regulating sale and use of poisons, exempting therefrom preparations of United States pharmacopoeia and national formulary and other established remedies, except paregoric which may be sold only upon physician's prescription.

9—HIGHWAY BONDS. Initiative measure adding Section 3 to Article XVI of Constitution. Creates State Highway Finance Board to serve without compensation. Directs cancellation of unsold forty thousand bonds authorized by Section 2 of same article; authorizes other bonds to same amount, to be issued as provided in said section, but at times and interest rate, not exceeding six per cent, determined by said board under then prevailing market conditions; makes provisions of said section otherwise govern said bonds and proceeds thereof. Beginning July 1, 1921, relieves counties from payments to state on account of highway construction.

10—CONSTITUTIONAL CONVENTION. Senate Constitutional Amendment 10 amending Section 2, Article XVIII of Constitution. Declares that Legislature, whenever recommended by two-thirds of each branch thereof and approved by majority at next general election, shall provide at next session for calling convention to frame new Constitution and for electing delegates thereto; prescribes number and qualifications of such delegates requires submission of such Constitution to people for approval at special election, authorizing such convention to submit alternative proposals. If this amendment is adopted requires that Legislature shall at next session enact all measures necessary to the holding of such convention.

11—ALIEN POLL TAX. Assembly Constitutional Amendment 13 amending Section 12, Article XIII of Constitution. Requires the Legislature to provide for the levy of an annual poll tax, and the collection thereof by assessors, of not less than four dollars on every alien male inhabitant of this state over twenty-one and under sixty years of age, except paupers, idiots and insane persons, such tax to be paid into county school fund in county where collected.

12—STATE UNIVERSITY TAX. Initiative measure adding Section 15 to Article XIII of Constitution. Levies ad valorem tax, for State University, of one and twentieth mills per dollar upon property taxable for general county purposes, collectible each year, beginning July 1, 1921, in manner required by laws in force November 7, 1910, for state and county taxes unless law hereafter otherwise provides. Requires payment thereof into "State University Fund" subject to draft by University Regents. Until such taxes become available continues provisions of Section 14, same article, giving State University appropriations preference over other governmental expenses.

13—COMMUNITY PROPERTY. Act submitted to electors by referendum. Amends Civil Code Sections 1401 and 1402, adding thereto Sections 1402a and 1271. Gives either spouse right to will half of community property to lineal descendants or other spouse, but not otherwise without latter's written consent. In absence of testamentary disposition vests entire community property in surviving spouse except any portion reserved by judicial decree for wife's support which, if not willed by her, vests in her heirs, excluding husband. Excludes half of community property from inheritance taxes and in computing administration fees.

14—INSURANCE ACT. Submitted to electors by referendum. Prohibits any subsidiary corporation, agent, or employee of, or person or corporation controlled by, any bank organized under laws of California or of any state in the United States, from acting as general agent or department manager of any insurance company transacting business in California.

15—IRRIGATION DISTRICT ACT. Submitted to electors by referendum. Amends sections 1, 2 and 9 of act approved March 31, 1897, as subsequently amended, providing for organization of irrigation districts. Permits organization of an irrigation district by majority vote of electors instead of by two-thirds vote thereof as now provided. Rearranges existing provisions relating to petition for formation of an irrigation district and duties of State Engineer and board of supervisors in connection therewith.

16—SCHOOL SYSTEM. Initiative measure amending Section 6, Article IX of Constitution. Adds kindergartens to public school system; requires addition to state school fund, and creation of state high school fund, from state revenues to provide elementary, secondary, and technical schools, respectively, with minimum of thirty dollars per pupil; requires county tax levies producing for elementary schools amount not less than state apportionment, and for secondary and technical schools amount at least twice state apportionment; requires school district tax levies for school purposes; applies state apportionment, and at least sixty per cent of county school taxes, to teachers' salaries exclusively.

17—ABSENT VOTERS. Assembly Constitutional Amendment 10 adding proviso to Section 1, Article II of Constitution. Authorizes legislative provision permitting registered voters, absent from their voting precincts at any primary or general election because of occupation requiring travel or military or naval service other than in United States regular army or navy, to vote in home precinct prior to election, or in any municipality within state on election day, and those in such service wherever in United States at least fifty thereof are stationed on election day; and provides for counting such votes by such methods as Legislature may prescribe.

18—EXEMPTING ORPHANAGES FROM TAXATION. Assembly Constitutional Amendment 40 adding Section 1 1/2 to Article XIII of Constitution. Exempts from taxation all buildings and so much real property connected therewith as may be required for the occupation of institutions sheltering more than twenty orphan or half-orphan children receiving state aid, but provides that no building, or real or personal property, so used which may be rented and the rent received by the owner thereof shall be exempt from taxation.

19—STATE AID TO INSTITUTIONS. Senate Constitutional Amendment 19. Amends Section 22 of Article IV of Constitution by adding thereto provisions authorizing Legislature to grant aid to institutions conducted for support and maintenance of children of a father who is incapacitated for gainful work by permanent physical disability or is suffering from tuberculosis in such a stage that he can not pursue a gainful occupation, and declaring that any county or municipality providing for support of such children shall receive same pro rata appropriations as are granted to such institutions.

20—LAND VALUES TAXATION. Initiative measure adding Section 15 to Article XIII of Constitution. Beginning January 1, 1921, exempts from taxation personal property, planted trees, vines and crops; improvements appertaining to land being taxed at not exceeding preceding year's amount until exempted January 1, 1923, and other county, municipal and district revenues collected from land values. Beginning January 1, 1924, requires all public revenues be raised by taxing land values exclusive of improvements, repealing Section 14 in same article. Declares war veteran, church and college exemptions, and privately owned public utilities using highways, unaffected hereby.

Again, other points worthy of most careful investigation are those in the proposed statutes which call for appropriation and others which call for reducing the taxing power of the state. If the voter is to prove himself worthy of making the fundamental law of the state he must take his pencil and figure a bit as to each measure as it stands alone and also all the measures as they are related to each other.

* * *

Law making is one big job. Let's be equal to it.

* * *

The fairs, implement and power shows which have been held this past season have made possible the beginnings of a liberal education as to labor saving abilities of farm power and improved implements. We have heard many a farmer express himself in effect that "I am done with farming excepting as the labor can be handled by my family or myself." The use of farm power may be made to take the place, in part at least, of some of the help which has been so inefficient during the last few months. To use this modern equipment calls for a knowledge of mechanics which few farmers possess unless they have natural inclination or else have taken opportunity to secure the necessary training. Sales agents have largely dropped their fool-proof-any-child-can-run-it line of talk. The need of a thorough understanding of the possibilities and the limitations of power and implements was never more apparent than today. Opportunity for this understanding is offered through practical observation, through the service departments of dealers, through correspondence courses and perhaps more satisfactorily through various schools. The wise farmer will avail himself so far as possible of these opportunities.

NO TAX ON SWEET CIDER

County Agent Fox of San Bernardino writes regarding the collection of war tax from farmers "who make their own cider and sell the same in open containers" in effect that such collection of tax may not be made under a ruling Mr. Fox has just received from the bureau of internal revenue of the treasury department. The ruling is signed by Alfred D. Van Buren and is:

"Any sweet cider containing less than one-half of one per cent of alcohol by volume, put up in closed containers for sale as a soft drink, is subject to sales tax of ten per cent of the sales price thereof, as provided by Section 628, Revenue Act of 1918. Such sweet cider may be sold as vinegar material without payment of the sales tax. Sweet cider direct from the press may be dispensed to customers by the glass or in other open containers without payment of sales tax, provided the cider is not mixed or compounded with any other ingredient for sale at the place of business or in proximity to such place of business."

DECIDUOUS FRUIT GROWERS DAY

By C. B. Messenger

THE success of California fruit growers as cooperators is proverbial. Not all efforts have been successful, but so many are really outstanding successes that it appears to be only necessary in California to have sufficient of a similar product, business leadership and business management.

One cooperative organization which has had several years experience and sent hundreds of cars of canned fruits overland has had but little attention from the public press because of the quietness with which it has brought its material together, canned and marketed it. This is the California Growers Association and it has canneries at Ontario, Hemet, Riverside, Elsinore and Fallbrook, with a total membership of 600.

All of these canneries are well equipped, that at Ontario being perhaps one of the very finest plants on the Pacific Coast. The work of the season is no sooner ended than the members of the association begin planning for a bigger and a better output another year. They realize that it is very probable California canning fruits will not realize the prices during the next four or five years they have since the war began. They also realize that a higher quality of fruit must be taken to the cannery in order to encour-

age a trade which may not be so keen as it has been in the past.

In order to encourage the growers in the reproduction of this grade of fruit the management has made it a habit to keep the membership fully informed. Social gatherings, picnics, etc., afford opportunity to disseminate this information to the members. One of these opportunities was given by the Riverside fair. In addition to the inspiration of the fair a call had been sent out for a gathering of deciduous fruit growers at Fairmount Park on Friday of fair week. Taking advantage of this invitation, the members of the association were urged to be present, and after a basket luncheon an informal conference was held on some of the problems of the associa-

tion. President Benton Ballou gave much satisfaction to the members in his report on some of the successes of the association. Joe Campbell, manager of the association, and Secretary J. O. Mills disclaimed talking ability. Plainly they have managing ability in large affairs, for the satisfaction expressed by members as to their conduct of the business was high tribute to them. Especially did they make appeal for delivery of the very highest quality of fruit.

To aid in this Prof. G. P. Weldon of the Ontario junior agricultural college gave a short talk and answered many queries as to necessity for spraying. No deciduous fruit is now successfully produced, at least not in a large commercial way, without use of the spray pump. There are both insect and fungous troubles calling for attention. Worse, they call for attention at particular moments, which necessitates the grower keeping before him at all times a calendar for spraying operations. Some of these pests, especially thrips, extend over such a long period that spraying becomes a serious problem for the grower who would make a profit from his orchard.

One instance was referred to where the blossoming period of a peach extended over a period of three months, beginning in January. To reach the thrips a spray is necessary while the trees are in bloom. Mr. Weldon felt sure that under such an aggravated case of extended blooming period continued spraying would be out of the question, but he did refer to cases where growers had delivered a fruit to the cannery termed "C" grade and at the same time a small proportion classed as "A" grade. The "A" grade brought \$130 per ton more than the "C" grade, or, in other words, the "C" grade sold at a loss while the "A" returned a handsome profit.

One of the newer pests of peaches is called peach scab, *Cladosporium carpophylium*. Fortunately, however, the spray which is effective on this pest is also effective on peach leaf curl. Mr. Weldon felt that peach leaf curl can best be handled by sprays while tree is dormant and that this spraying has often been delayed until too late, some growers believing that the work should be so timed as to just precede blooming. But last season he had excellent results in preventing leaf curl and other fungous troubles by spraying with lime-sulphur about the middle of January. If the spraying is not done during dormancy then a weak Bordeaux solution, 3-3-50, after tree is beginning to leaf out, will prove beneficial.

Dozens of questions were passed to Mr. Weldon and other speakers which brought out much of value to the attendants. One especially wished to know why the association could not be used to purchase such supplies as spray materials where the members were using them in such large quantities.

Dr. Whitten had been expected to be present and discuss effect of long pruning on fruit quality. His place was well filled by Farm Adviser R. W. Hodgson of Los Angeles County.

Mr. Hodgson gave a short review of the return of long pruning, many points regarding which have appeared in former Cultivators, but made it particularly striking by incidents where it was shown that fruits from long pruned trees were larger, better in appearance and quality, contained more sugar and solids and dried away at a much lower ratio than those of trees pruned severely which made heavy draft on the tree to reproduce new wood growth.

Mr. Hodgson touched incidentally on one point which the Cultivator has been urging for the past few months, and that was the necessity for fall irrigation. Until the leaves are nearly half grown, the blossoms, the setting of young fruit and other tree activities are made possible because of stored up starches of the preceding year's growth. If the tree is deprived of these stored foods the spring growth is defective and the quality and quantity of the fruit, and possibly the life of the tree, is in danger. No one yet knows the life history of little leaf, one of our serious pests, but it is fairly definitely established that orchards kept in good growing condition during the fall are in better shape to meet the strain of spring growth and there is less of little leaf in such orchards.

OXYGENIC

A New Discovery in Agricultural Field
A Sure Cure for the Blight
The Greatest Fertilizer in the World

DISCOVERED BY

P. E. CALOJA and J. B. SABATINI

OXYGENIC is a chemical that acts as a cure for the blight, scale and other diseases of trees and plants. It is also a powerful insecticide.

As a sure cure for the blight alone, OXYGENIC is the remedy which has long been sought by owners of farms and orchards. The blight is the worst disease which can attack vegetation of any kind. It is the beginning of many other disorders, and after it strikes a plant or tree, the entrance of insects is almost sure. In the first stages of the blight, the fruit becomes petrified. As the disease progresses towards the body of the plant, blisters begin to appear. The infection works slowly down until it reaches the roots. This causes the so-called "worn root" or "squirrel root."

The blight is not caused by insects as many people believe, but by adverse atmospheric conditions. It always strikes the tree or plant at the top when the buds are swelling and the sap is in continual circulation within the body of the tree, or whatever form of vegetation is infected.

After a long series of experiments, we have discovered how to blot out this plague which is menacing the agricultural world.

The Remedy Lies in the Careful Application of OXYGENIC

This chemical can be used successfully for both trees and vegetables. In the case of fruit trees, the best results are obtained by spraying at the proper time and by sprinkling the ground for about five feet around the trunk.

OXYGENIC can be applied to vegetables by inoculating the seed before sowing or by spraying.

OXYGENIC is of vital interest to anyone who operates a farm or orchard, no matter how large or small it may be.

USES FOR OXYGENIC

OXYGENIC is a sure cure for the blight, scale and other diseases of vegetation. OXYGENIC is a powerful insecticide. OXYGENIC is the greatest fertilizer in the world and one that gives immediate results.

OXYGENIC is a disease preventive for inoculating seeds before planting.

OXYGENIC is not composed of highly poisonous chemicals and can therefore be used freely without injury to fruit trees and plants.

The price of Oxygenic is cheap insurance against the loss of a valuable crop.

Strawberry Planting

"L. A. W." and "E. A. P." have asked what are the best strawberries for Southern California, how and when to plant, and the cost of stock, operations, etc., for the first year. An article covering these points fully appears elsewhere in this issue.

Grapes for San Fernando

I own a small tract where the Little Tehuenga crosses the state highway in San Fernando Valley. What kind of grapes do you recommend planting there? What do you know of the Gros Colman?—Subscriber, South Pasadena.

The Muscat and the Cornichon are known to do well in that district. Gros Colman is more popular in the north than in the south, but Prof. Bioletti of the state agricultural college recommends it for the south. At Hemet he was asked for a list of the best home grapes for the south end of the state and his answer may interest you:

"I will give you three grapes in three classes, a white, a red, and a black in early, medium and late season, though there is no good flavored late grape. Nearly all these are new ones, but the best, and all but Black Monnukka and California Concord, or Pierce, are to be short pruned. The early varieties are: Kahlali, Duke of Magenta, and Black Monnukka, being white, red and black as named, as are the other classes. For medium plant White Queen, Marvel of Malaga, and Black Muscat, or perhaps the Pierce

where the Black Muscat is not good. In late varieties use Verdal, Gros Guillaume, Gros Colman or even Black Cornichon. One may get not more than two each of the new varieties from university farm, Davis, for five cents a cutting so long as they last. Better allow them to substitute in case of shortage."

Blazing Star

What is the beautiful yellow flower which I send?—Subscriber, Moorpark.

This is the Blazing Star, *Mentzelia laevicaulis*, which grows in the dry washes in California.

Rough Skinned Oranges

Please advise me what to apply to my orange trees, whose fruits have a rough skin, something that will smoothen the skin.—Subscriber, Oroville.

It cannot be done. Fertilizer may be at fault, an excess of nitrogen—too much organic matter in the soil—but this is not probable. The theory has

been advanced that potash will smoothen the skin, but we have insufficient data from official sources to draw any definite conclusions. It is quite likely that you may have the Australian type of Navel. It may be that soil practice, fertilization, etc., is at fault. The question is so general, without statement of soil, care, etc., that no answer of close application can be made.—E. B.

Winter Vegetables

I would like to have a list of named varieties of the following vegetables for planting now to get crop for winter and early spring use. My rhubarb is going to seed. What shall I do for it?—Subscriber, Sherman.

Your list is included here, some both first and second choice: cabbage, Cannon Ball or Winningstadt, plants or seeds, latter ready by May; carrots, Oxheart or Half-long; beets, Crosby's Egyptian; parsnips, Hollow Crown or Guernsey; lettuce, Los Angeles Market; cauliflower, California Pearl or Dry Weather, preferably plants, as seeds sown now would bring flowering season into hot weather; spinach, Giant Amsterdam, Prickly Winter. As soon as flower stalks appear on rhubarb break or cut them out or they will exhaust the vitality of plants.—E. B.

Pruning Pears and Other Deciduous Trees

Where can I find authoritative information on how to prune pear, apple and peach trees a year old?—Subscriber.

Methods of pruning have been so radically changed in the past few years that it is rather hard to give reference to "authoritative" information. Pruning of the trees mentioned by the inquirer is done in California today usually by the long system. This has been touched upon in the columns of this paper several times and a good many details of the method have been given. In the issue of the Cultivator of June 5, 1920, is an article on the success of long pruning. By writing to the state university at Berkeley you may secure a bulletin on pruning which was issued by the agricultural college of the university in 1919. Bulletin No. 313, "Pruning Young Deciduous Fruit Trees," by Warren P. Tufts.

Getting Rid of Bermuda

I have an acre that I want to set out to fig cuttings in the spring. Part of it is covered with Bermuda grass. How can I get rid of it and not injure the land? What would be a good fertilizer to use on this land for fig cuttings?—Subscriber, Modesto.

The best method of getting rid of Bermuda is that of plowing and cultivation. This is a good time of the year to kill the stuff, as Bermuda does not like cold weather and is almost dormant these cool days, so that cuttings do not root so readily as in the warmer spring months. Bermuda is very easily eradicated by constant cultivation. Of course if one had begun earlier, before summer, by growing a clean culture crop, the problem of eradication would have solved itself. However, we think continuation of the plowing and winter cultivation will bring results, but if it does not, then the expense next summer of giving the clean culture crop could be met by planting beans or other cover crop which will give compensation and at the same time aid in eradicating the pest. Stable manure is your best fertilizer. However, until cuttings make material growth fertilizer should not be needed.

Poultry Queries

Conducted by J. A. Koethen

Roosts and Nests

I should like to copy the plan of No. 1 in the article on poultry houses in last week's issue of the Cultivator. Can you give me data in regard to nests and roosts?—Subscriber, Le-moore.

I have not the data for this particular house, but the arrangements are similar in all houses of this type. The roosts are built above a droppings board which fills the rear half of the house and is about three feet from

Do You Know—

STANDARD PRACTICE

The use of Timken Tapered Roller Bearings at points of hard service in the great majority of automotive vehicles is proof of leadership established on the tapered principle of design, quality of manufacture, performance on the road, and service to the automotive industry.

that the freight carrying capacity of America's motor trucks is practically equal to that of all our railroads?

that the great majority of these trucks have Timken Tapered Roller Bearings at points of hard service?

that Timken Bearings are notable for their *compactness*; their *ability* to carry radial load, or thrust load, and all combinations of the two; and their *easy take-up* for wear?

that Timken Bearings mean dollars and cents in the owner's pocket because they permit of *adjustability* instead of expensive *replacement*?

TIMKEN

TAPERED ROLLER BEARINGS

the floor. For a house 16 by 20, which is designed to hold from 100 to 125 Leghorn hens, five roosts should be sufficient. These are about 18 inches apart and are built into a frame which is suspended from the roof by wires so that the roosts nowhere touch the sides of the house. They should be about a foot above the droppings board and so arranged that the front of the frame can be easily lifted for cleaning. The roosts are built lengthwise of the house. The nests are built along the front of the house, with tight, sloping roofs to keep out the rain, and the mash trough or box is

beneath. Sometimes the nests are in two tiers, sometimes in only one. In some very good designs they are built under the droppings board. The mash box is protected by slats on each side between which the hens can just put their heads, and a narrow platform on each side gives them standing room.

Chickenpox

All my pullets have what I feel sure must be chickenpox. They have scabs on their combs, wattles, earlobes and around their eyes, but do not seem very sick, though they have stopped laying. Is there danger of contagion, and what can I do for them?—Subscriber, Madera.

Chickenpox, undoubtedly, and there is not much you can do after the whole flock has developed it. The only remedy I have heard of which will lighten an attack after it reaches this stage is sulphur. Take the common dry sulphur, "flour" or "flowers," whichever you choose to call it, and mix in the dry mash, making it about five per cent of the mash. That would be a pound of sulphur to 20 pounds of mash. Dr. N. W. Sanborn claims that this is a great help in bringing a flock through the chickenpox. Some authorities advise soaking of the scabs and touching the raw sore with cresol or some other disinfectant, but this is a good deal of work and seems cruel. Rubbing the scabs with carbolated vaseline may have some beneficial effect. At least, it is not much trouble. I do not believe there is much danger of contagion, still I should keep children away from the chickens. If you had vaccinated the flock as soon as you noticed the first case you could probably have kept the disease from spreading, but it is too late now.

Liver Trouble

Yesterday I noticed that one of my Barred Rock hens was sick. I killed her and found the liver greatly enlarged, whitish and very soft. I feed barley and table scraps and the hens run on alfalfa. What ailed this hen, and is it contagious?—Subscriber, Merced Falls.

Enlarged liver is not contagious, but any liver trouble indicates faulty feeding, which may produce the disease in other hens. Excessive feeding of barley, without another grain or mash, would seem to be the cause here. You should provide your hens with a laying mash immediately. Keep it before them constantly, and make the grain feeding very light for a while. A small handful for each hen daily is sufficient, and it should be not barley alone, but barley with another grain, preferably wheat. If possible, it would be well to leave barley out of the ration entirely for a time.

Sudden Deaths

I have recently lost five of my best pullets from something we are unable to diagnose. They are all in good condition, quite fat, in fact, all but one died on the nest, and all had diarrhoea, a white, sticky discharge. We think it is poison, but are unable to locate poison of any kind. Do you think alfalfa which sticks in the cutter and sours might do it? Is there a California weed which might grow in the alfalfa and cause poisoning? They die in about six or eight hours after being taken sick. I feed wet mash in the morning three quarts to 100 pullets with a teaspoonful of salt and one of pepper.—Subscriber, Glendale.

My first thought was that the salt in the mash had not been well mixed in and some of the hens got too much. My second is that there may be heated or moldy grain in the ration, possibly ground into the mash where it cannot be detected. I would give up the moist mash for a time and change to another dry mash. There has been considerable complaint this summer of the poor quality of beef scrap in some mashes. There is a possibility, of course, that these hens had cholera, which is more common than it used to be. The only cure our experiment station has found so far for cholera is a thorough cleaning up of the premises, with a tablet of bichloride of mercury (1/5000) in the drinking water. I doubt if the hens would eat a weed which was not wholesome or the soured alfalfa.

The Hen and the Orange

FONTANA originated the most successful farming combination in Southern California, the "Partnership of the Hen and the Orange."

Citrus Trees need Animal Manures. Hens need ground to run on. By placing henhouses in the orange, lemon and grapefruit groves, the owners of FONTANA groves can solve the fertilizer problem, and at the same time make good profits.

LOW PRICES AT FONTANA

Look at everything else in California, get the prices—then go to Fontana and note the LOW PRICES and the EASY TERMS.

QUALITY is there. The secret of the low prices is in very low original costs of land and development.

FONTANA is GOOD and also CHEAP.

The Wonderful Attractions of BRITISH COLUMBIA

Few countries possess all the conditions for happy, prosperous living as does British Columbia. The varieties of climate and soil offer inducements for almost every branch of agriculture. Whether in the warm interior valleys, the rich grazing table lands or the fruitful lowlands of the Coast or Vancouver Island, the advantages offered for

Dairying, Fruit Growing and Stock Raising

are such as must appeal to those who wish to improve their circumstances and at the same time live in a country of delightful climate, magnificent scenery, varied resources, progressive people and abundance of opportunity for development. British Columbia—the playground of America—is already famous for the production of its orchards, fields and dairies. Now, is the time to learn about this wonderful Province and share in its possibilities. It's industrial life—mining, lumbering, fishing, manufacturing, transportation—assures a ready market at good prices for all the farmer can produce. Schools, churches, railways, roads, telephones, all the conveniences of an old land await you in this new Province of Opportunity and Success. A GREAT HEREFORD EVENT

The big three day Hereford sale scheduled to be held at the state fair grounds, Sacramento, November 4, 5 and 6, is quite the most important event ever staged by the supporters of the Whitefaces, and is striking evidence of the progress being made in the beef cattle industry of California. The first sale will consist of a selected lot of high class Herefords from the leading herds of the West, and Secretary Bunting of the Pacific Coast Hereford Cattle Breeders Association, under whose auspices the sale is held, states that every effort has been made to assemble an offering up to the usual standard of the association sales. The annual association sales were originated by the members of that organization with two purposes in mind. First, it was felt, in view of the widespread interest being manifested in Herefords, that an opportunity should be provided men about to make a start in the business to select cattle in every way representative of the breed and of the sort that would tend to extend the popularity of the breed, and second, to provide an outlet for their own top productions. During the last few years many men have come to look forward with confidence to these sales.

The second day will be given over to the first individual offering made from the widely known Nevada Hereford Ranch, owned by J. H. Cazier and Sons, Wells, Nevada. This firm maintains one of the largest and most select herds owned in the West and their cattle have been prominent in the development of the cattle industry of the West and in Western show rings for many years. Much of their success has been due to the use of Harris Standard 2d, a Disturber-bred bull, whose get have come to be reckoned very highly. Something over a year ago Messrs. Cazier purchased the young bull, Beau Blanchard 76th, one of the best sons of the famous Beau Blanchard, for the record price of \$10,000. This bull was grand champion at the state fair and the Los Angeles Livestock Show and had the distinction of siring the junior champion bull at each of those shows. Incidentally, it is of interest to know that it was the Beau Blanchard 76th-Harris Standard 2d cross that produced the two junior champions.

The series of sales will be brought to a close on the sixth by the sale of 50 registered females from the Barn-grover and Wright herd. These breeders have prepared an offering that they are confident will prove attractive to the beginner for the reason that nearly the entire number they have listed were calved in 1917 and therefore have many years of usefulness before them. A feature of this last sale is the fact that, aside from being well bred, a number will carry the services of the richly bred Maples Lad 137th, a son of the noted sire Bonnie Brae 8th.

The three sales will be held under the management of the California Breeders Sales and Pedigree Company and C. L. Hughes, the sales manager, says that there is every reason to expect that the majority of Hereford breeders of the West will make Sacramento their headquarters during the three days. Col. Ben A. Rhoades of Los Angeles will be on the block in each of the sales.

NEWTON-CHRISTIENSEN HOG SALE

The Newton-Christiansen sale of registered Poland China breeding stock to be held at Pomona on Wednesday, October 27, is an event not to be overlooked by breeders and ranchers interested in keeping up the quality of hogs. Both herds are alike notable for their prolificacy and general utility. They have the blood of Model Major, Blue Valley Tecumseh, El Profito, President, King's Big Bone Leader, Long Smooth Jumbo and Tourist Master.

A SHIRT TALE

The scoutmaster was talking to one of his tenderfoot scouts. "Boy," he said, "you will have to make your own way in the world some day. Do you know the meaning of energy and enterprise?"

"No, sir," replied the tenderfoot. "I don't believe I do."

"Well," I tell you. One of the rich-

est men in the world came to this city without a shirt on his back, and now he has millions."

The tenderfoot looked puzzled. "Millions?" he repeated in wonderment. "Why, how many does he wear at a time?"—September Boys' Life.

BREED SHORTHORNS!

A CALIFORNIA LIVESTOCK OPPORTUNITY

Right today there is no more attractive business for the ranchers of this state than the production of the right sort of registered SHORTHORNS. This state will always be an important cattle section. Changing conditions make it imperative for cattlemen to produce a more efficient type of cattle through the wider use of better blood. California breeders do not produce one-tenth the number of bulls required annually. The SHORTHORN breed acknowledges no superior on the range or in the feed lot. Hundreds of ranchers are turning to beef cattle because they can be produced without serious labor problems; require no expensive buildings; can be grown on cheap feeds and there is a wide and active demand for bulls at profitable prices.

The matter of success with Shorthorns will be measured by the kind of foundation material used. Men with foresight will take advantage of an opportunity to make selections from herds that have earned a reputation for cattle of reliable breeding and correct type. To such men there will be wide appeal in the

Caledonia Farms' Sale West Sacramento, Cal.

Friday, November 12

where 50 females, 15 of which sell with calves at foot, and all bred, and 10 high class young bulls have been listed. The females are well bred, a number are Scotch, of good ages and colors and are big, thick-fleshed, straight-backed, deep-chested, heavy-quartered, good milkers, that have been raised under natural conditions. Many of the cows have never tasted grain, yet are marvelously thick fleshed. All will carry the service of one or another of the three great bulls, IMP. CALEDONIA, GAINFORD MATCHLESS, and PINE GROVE KING. Several of the calves are sired by the same bulls. The 10 young bulls constitute one of the best lots ever offered in this state.

150 REGISTERED HEREFORDS AT PUBLIC AUCTION

State Fair Grounds - - Sacramento, Cal.

Thursday, November 4
45---Registered Herefords---45

This is the regular fall offering of picked tops, known more popularly as the "Association Sale." Hereford breeders all over the coast have been striving constantly toward the improvement of their herds, and it is only natural to expect advancement in quality in each succeeding sale of picked cattle.

Foremost herds of the west will be represented in this sale, and the buyer who wants to add one or more extra choice animals to his herd, or the beginner who wants to start with that sort of foundation will find ample range of selection in this offering.

Sale Under Auspices of

Pacific Coast Hereford Cattle Breeders Association

J. I. Cazler, Pres., Wells, Nevada. J. A. Bunting, Sec., Mission San Jose, Calif.

Friday, November 5

Nevada Hereford Ranch

WILL SELL

55---Registered Herefords---55

The owners will endeavor to make this, their first individual public sale offering, an important event in the breed's affairs in the west, and one from which buyers will secure foundation animals upon which many splendid herds will be built. The statement that this is a rare offering, both as to breeding and individual excellence, is entirely conservative, and buyers of the better sorts should certainly find in this list such individuals as will meet their every requirement.

Beau Blanchard 76th

HARRIS STANDARD 2ND is as well bred as any bull in the United States and is a wonderful sire. Our show herd for the past three years has shown some evidence of his breeding, ability, but to be fully appreciated you must see the uniform excellence of his entire get on our ranch. His get have never been defeated in the Get of Sire class.

IN THIS SALE we will sell over 30 helpers sired by him, and many of them are safe in calf to BEAU BLANCHARD 76TH. Others will be bred to ABE MISCHIEF, by Mousel's mighty Beau Mischief, and to BOCALDO 21ST, by Hazlett's Grand Champion, Bocaído 6th.

The get of HARRIS STANDARD 2ND won first in Get of Sire class, adding another win to their string of undefeated showings.

At 1920 California State Fair, BEAU BLANCHARD 76TH was Grand Champion in the greatest Hereford Show ever staged at Sacramento, and his young son PILOT, out of a Harris Standard 2nd dam, owned and exhibited by Wm. Briggs, Dixon, was first junior bull calf and Junior Champion.

Four of the first calves sired by BEAU BLANCHARD 76TH, and out of Harris Standard 2nd dams, bid well for high honors in the individual classes, and in the Get of Sire group stood second only to the get of Harris Standard 2nd. Remember that in this sale a large number of HARRIS STANDARD 2ND heifers sell bred to BEAU BLANCHARD 76TH.

At Los Angeles Live Stock Show, just closed, Beau Blanchard 76th was again Grand Champion, and his junior calf son, BLANCHARD 1ST was Junior Champion and Reserve Grand Champion.

Harris Standard 2nd

Otis Cordell, Herdsman

Saturday, November 6

50---Registered Herefords---50

This is an offering of most popular breeding, and should particularly attract buyers of heifers, although there will also be found an attractive number of young matrons in the list.

Among the females to be offered will be found

22 DAUGHTERS OF BOURBON COLUMBUS

eight of them out of daughters of Beau Tempter, and the balance out of daughters of Beau Donald, Rupert Donald, Perfect Donald, and Repeater 9th.

5 DAUGHTERS OF BEAU FAIRFAX

out of dams by Beau Tempter, Erling March On, Woodford 2nd, and Rupert Donald.

8 DAUGHTERS OF DON PERFECT 10TH

out of dams by Beau Donald, Beau Tempter, Paloma's Erling, and Don Brummel.

4 DAUGHTERS OF BEAU TEMPTER

out of dams by Rupert Donald and Columbus Busybody.

Other sires represented by daughters in the list are MR. PERFECTION, PATRICIAN 5TH, GAY LAD 31ST, DON BRUMMEL, REPEATER 9TH, and GAY LAD 44TH.

43 OF THE FEMALES

in this offering were calved in 1917 or later, a splendid group of young brood material that should make substantial profits for their new owners.

Many of these choice young females are well along with calf, others now being bred to

MAPLES LAD 137TH 788370

who is by Bonnie Brae 8th and out of a daughter of Domino, second dam by Beau Modest, he by Beau Brummel, third dam by Luminary a son of Lamplighter.

COMBINATION

Pre-Breeding Season Sale Poland Chinas

Sale to be held on Wednesday, October 27th, at LOOKINGBILL & VELZY'S UNION STOCK AND SALES YARDS, POMONA.

40 head of useful breeding stock from the well known herds of E. Avery Newton, Lankershim, and H. Christiansen, Arlington, will be catalogued for this occasion, and papers for every animal sold.

This sale is to be known distinctly as "a pre-breeding season sale." With three or four exceptions these sows and gilts are purposely sold open, that new owners may mate them in November to their own boars for March litters.

First Prize and Grand Champion Blood

Three crack herd boars, also a few young boars of early spring farrow, to be found in these offerings.

Lower Land, Labor, Freight Rates, or Pay More for Cattle, or You Will Have No Cattle

By A. L. Spellmeyer

SOME examples of actual expense of grazing and feeding cattle may be interesting and refute the argument of some California men that yearlings must come down and feeder steers must come down. It is surprising how little general knowledge of cattle raising cost there is among cattlemen. The California man who buys yearlings wants them at a price the Arizona grower could not raise them for, and the Arizona grower wants to sell at a price the California man cannot pay.

I have been on both sides and have kept record of expense and have observed the financial end of hundreds of other ranches, watching their investment, their expense and their number of sales and prices, and stand ready to prove my assertions herein.

Example 1

200 mixed Hereford and Durham range cows, cost delivered California June, 1919, \$55 each, \$11,000.

18 months grazing at \$1 per month each, \$3,600.

18 months labor, grub and supplies, \$1,800.

Feeding hay and meal three months in winter, \$4,000.

Direction and supervision, \$1,000.

Shipping and driving to change range, \$600.

Interest 18 months at ten per cent per year on first cost, \$1,650.

Interest average expense outlay ten per cent, \$550.

Total cost, \$24,210.

Income from 70 per cent calf crop, 140 head at \$20, \$2,800; 20 head of cows lost in shipping, in calving, from disease and drouth and accident, therefore 140 calves from 180 cows, or only 40 dries, \$21,410.

180 cows costing after 18 months \$21,410, or \$120 per head.

Those cows will hardly bring \$60 each today, or \$60 actual loss.

Example 2

400 selected white face Hereford yearling steers, cost delivered July, 1919, California, \$50 per head, \$20,000. 18 months pasturage at \$1 per head per month, \$7,200.

18 months wages one man, grub and supplies, \$3,600.

Direction, driving, changing range, \$2,000.

Interest at 10 per cent for 18 months original investment, \$3,000.

Interest on average expense outlay, \$1,000.

Total cost, \$36,800.

Loss on these steers in 18 months was two per cent, or 8 head, no winter feeding, therefore the 392 steers cost as long twos \$93 plus. They would possibly bring \$80 each today, a loss of \$13 per head.

Example 3

103 Hereford steers costing July, 1919, delivered California as twos, \$70 per head, \$7,210.

Pasturage 12 months at \$1, \$1,236.

Labor, grub, supplies, 50 cents per month each, \$618.

Supervision and direction, etc., \$500.

Interest 12 months on cost and expense, ten per cent, \$846.

Total cost, \$10,410.

Loss was three steers, 100 steers sold at eight cents, 1,000 pounds; loss \$24.10 each, or \$241.

Typical Cost

Typical California cost of running one cow or one steer: Average 15 acres land costing \$10 per acre, or \$150. Average one man to 500 cattle, or \$1,200 per year. Average grub, supplies, etc., \$1,200 more. At seven per cent on \$150 land investment we have yearly pasturage, \$10.50; taxes, supervision, maintenance land and cattle, \$4; labor, grub, supplies, \$5; interest on cattle, purchase price or value, \$6; loss from drouth, disease or accident, \$1.50; incidentals and unlooked for items, \$1; total cost, \$28.

You will note on above yearly expense there is no winter feeding figured, also minimum loss and no range transfers.

As one prominent California man

figures he could not on present beef prices afford to accept yearling heifers free and grow calves to steers from them. If the range man gave him a yearling heifer and put it f. o. b. cars Arizona, the yearling heifer would cost him \$5 freight and feed to deliver and \$28 to run, or \$25 as minimum, standing \$30 as a two year old. He could expect 70 per cent of calves the second year and would then with 100 cows have 70 calves standing him \$5,800. It would cost him \$74 to keep the steers until they were three years old. If he sold veal calves at ten cents, or \$20, he would be losing each year, as the cows given to him as free heifers would only net \$14 on a \$25 minimum expense. Can this keep up, or do you believe that California land will go below \$10 per acre? Do you believe that we will have \$1 a day labor, one-half freight rates, four per cent money, half taxes, and all good grass years? If we don't, cattle will have to advance or men will have to quit raising them. Some cattle producer is giving four cents loss on every pound of meat you buy.

You hear the California men, competent feeders, range men, and bankers say in order to sell eight cent beef they must have \$20 yearlings in Arizona or on ranges, and six cent feeders. Is there a chance for it? The whole present economic structure would fall before such a balance could arrive, as certainly a fair return is necessary if the range men exist and survive.

The Arizona steer man buys yearling steers from ranges, and even today the lowest prices have been from \$30 to \$35 per head. The first cost is about \$2 to ship or locate them. Thereafter the Arizona steer man must figure forest fees and interest on land, running expense of labor, grub and supplies, taxes, a large horse ramada, all of which approximate with interest on cattle \$15 per head per year at least. The three year old therefore stands him a cost of \$67, but he cannot gather them all and a third go over to fours and fives so that even on 1920 yearling prices the 1922 threes steers will stand him \$70 or better. The average Arizona three sold does not weigh over 900 pounds. At eight cents there is a small profit, but at six cents, or \$54, this Arizona man would go out of business when his two years supply runs out, and that is what is happening now. Your chance for six cent feeders is a vain dream if cattle supply is to continue.

On the Arizona breeding cow all outfits figure three cattle yearlings up to five for each calf sold as a yearling. The most efficient outfit in Arizona would have to run 3,000 cattle to turn 1,000 yearlings. While the expense per head running is less, loss is considerable, as you can easily figure.

Land control or ownership, reservation fees and forest fees will cause a yearly grazing expense per head of \$3; labor, grub, taxes, loss, supplies, etc., \$5; delivery to railroad, \$1; bulls, interest, etc., \$5; total, \$14.

To be more explicit, \$14,000 a year is a small expense for one 1,000 head outfit, and the ordinary 1,000 head outfit in Arizona today on counted cattle and horses and holdings will represent an investment of \$75,000. As the interest rate there is 10 per cent now, it will be easily seen that figuring \$7,500 yearly for interest allows only \$6,500 for total expense, taxes, supplies and labor, and actually expense runs much higher.

The yearling output of this 1,000 head outfit could not be over 350 yearling steers and heifers, from which must be deducted 30 head for range loss maintenance, or 320 yearlings costing \$14,000, or \$43 plus. Estimating that the Arizona man only borrows a third of his ranch value and does not figure interest, it would make his cost \$9,000 on 320 yearling steers and heifers, or about \$30 to raise them, and that is what is happening. All years are not good years.

When the California man figures \$20 yearlings he must assume vast reductions in all items of life, labor, food, government and transportation, elimination of autos and all comforts or

luxuries. Cheaper production is possible if we step back and live as the Japanese, Hindus and Armenians live here in our midst, and if all the government and all the American people do likewise, but that is not in accord with progress or civilization.

Cost of the average \$35 Arizona yearling steer fattened from California grass in two years, f. o. b., \$35; freight, hay and shipper, \$6; expense two years California grazing, \$56; total, \$97.

The average steer of that kind, if it got fat, did not go over eight cents f. o. b. ranch corral last year, or \$88 if it weighed \$1,100 pounds. There is a possible but not probable profit on ten cent grass beef of \$13 for keeping a steer two years.

Feeders are making an average charge of 40 cents per day on 120 day feed. The ordinary feeder steer will cost eight cents and freight, or about nine cents delivered. It will cost \$48 or more to put on 300 pounds over the weight you bought, and such gain is improbable. Your \$90 steer stands \$138 plus \$3 interest, or \$141, and may weigh 1,300 pounds, but 1,200 is nearer the probability. It is going to cost you under ideal conditions, with all good luck, from 11 to 12 cents for that finished beef. Today men can't get over ten cents for beef top beef costing about two cents per pound to finish. And we are told such conditions can continue.

A change is due. The cow men of California are wasting time in figuring how cheap the Arizona yearling or feeder should be. The cow men of Arizona are wasting time in cussing the California buyers and other buyers' low prices. What they will have to do for their financial salvation is cooperate or die financially. As I have attempted to show you, it is not a question of a drop in values, and then a healthy condition after loss is absorbed. If it were the present cattlemen could go broke and others would replace them and cattle be raised. It is a question of the overhead, the daily, weekly and monthly expense that makes higher prices for cattle imperative if this nation is to continue to furnish its own supply.

While the terrible losses are prevalent to producers, the packers are paying big dividends and making healthy profits, the retailers are making enormous profit percentage. The very industry on which they depend for their existence is being sapped. How much longer can we stand this, even though we know national shortage is here in cattle, with cow slaughter merely a sop to hold off the accounting.

COW TESTING PAYS

"The dairyman who practices good business methods and continually weeds out the poor cows is sure to increase his profits," says E. M. Harmon of the University of Missouri college of agriculture. "This point is very well illustrated by the following results from a recent summary of some of the herds for the first and second year's work:

	Average Per Cow		
	Milk.	Fat.	Profit.
First year.....	5,543	253.7	\$109.95
Second year.....	5,730	279.7	121.87
Increase	193	26.0	11.92

"The records on these cows have very materially increased their sale value. In addition to that the owners have an accurate index on which cows to save and which heifer calves to raise. But even disregarding the above considerations, the increase of \$11.92 per cow is much more than the cost of the testing, showing clearly that the cow testing association is a profitable proposition.

"These men are gradually building their herds up to a point of real profit. They are doing it through their cow testing association. It isn't the man who makes one phenomenal record and then quits who establishes himself as a breeder. It is rather the man who can start in and gradually increase his production and profit year by year.

"No one knows what his individual cows are doing till he applies the Babcock test and the milk scales. Furthermore, it will pay every man to do this testing. We are continually meeting striking illustrations of this.

"Last fall J. D. Wilkerson bought a pure bred Holstein cow, Lady Korn-dyke Norma Pietertje, for \$265. And

OLYMPIC DAIRY FEED

Filling Up the Milk Cans

COWS don't give milk any more. They swap it for good care and nourishing feed. And when they get that, they more than balance accounts.

Whether it's a prize winning cow or the ordinary barnyard variety, rations containing the same tissue-building, milk-producing elements are her just due.

OLYMPIC Dairy Feed produces the highest milk flow over the longest possible period.

Scientifically formulated by practical feeders and especially trained chemists, OLYMPIC Dairy Feed increases butter fat and decreases production costs.

In this perfectly balanced dairy feed are the following ingredients: Ground Barley, Linseed Oil Meal, Cotton Seed Meal, Soybean Meal, Corn Feed Meal, Wheat Bran and Corn Gluten Feed. It's a combination that makes healthier cows and wealthier dairymen.

that was all she was worth as an untested cow. When she freshened he put her in the cow testing association. In five months she produced over 500 pounds of butter and will undoubtedly break the cow testing association record in Missouri. If she continues as she has started, she should exceed the present state record in the official testing class. After five months on test Mr. Wilkerson sold this cow for \$1,000. The only thing that added the \$735 to the price was that she had a proven record of production. There are many other cows which would sell for much more if they had a record of production. No man with a dairy herd can afford not to test."

SOUTHERN CALIFORNIA FAIR

(Continued from Page 539.)

two year old cow, who was grand champion cow at the state fair, was again made grand champion over Ruth Domino, the yearling heifer, who won the honors at Los Angeles.

Shorthorns were shown by the San Julian Ranch of Lompoc, William Bond of Newark, F. L. Hall of Perris and F. C. Collier of Wildomar. The competition was keen, but the San Julian Ranch and Bond captured most of the firsts. Silver Cup, owned by the San Julian Ranch, was grand champion bull, and Bond's two year old cow, Ormondale Maid 2d, won the gold award in the female class.

Dairy

In the dairy cattle division the Holsteins were most numerous, but were pressed closely by the Jerseys and Guernseys.

(Comment on dairy classes is necessarily held over till next week.—Ed.)

Hogs

The hog show was the biggest ever at this fair, with the Durocs slightly in the lead in numbers with 140 head. The Diamond Bar Ranch, Falfadale Farm and J. C. Craig were the most successful contenders. E. H. Hughes, a recent addition to the animal husbandry staff at Davis, did the judging. Lucy Pathfinder, from the Diamond Bar, was senior and grand champion in the absence of her sister, Queen of Pathfinders. The Falfadale gilt, Miss Defender Sensation, which was first under six months sow pig at Sacramento, was junior champion. Her sire, Great Orion Sensation Junior, the great Falfadale Farm boar, was grand champion as at Los Angeles and Tulare. Cherry Pathfinder, shown by the Diamond Bar Ranch, was junior champion boar. The litter of junior pigs sired by Ace of Pathfinders, shown by the Diamond Bar, was the sensation of the show, as it has been everywhere else, and won first young herd, first young herd bred by exhibitor, first produce of dam and second get of sire.

The Berkshire class was full and the quality was excellent. A. B. Humphrey of Escalon was the most successful exhibitor, with the Italian Vineyard Co. of Guasti pressing him closely at all times. D. J. Bastanchury's aged boar, Royal Longfellow 5th, was easily first in his class, but was defeated for senior champion by Escalon Big Joe, who has been grand champion of most shows this fall. Humphrey's wonderful senior yearling sow, Grape Wild Rose 6th, was easily the grand champion over the junior champion, Castleview Royal Duchess, shown by the Italian Vineyard Co.

The Poland Chinas were not as numerous as at the other fairs, but they were of the finest type. Santa Anita Rancho won the most ribbons, principally with the aged sow, Miss Big Price, and the litter of junior pigs sired by Orange Boy. The sow was senior and grand champion and her litter won first young herd, first produce of dam, first get of sire, as well as many single prizes, including junior champion sow. Buster Bob, who belongs to the Eastman Ranch at San Fernando, was senior and grand champion boar, and Eastman's Korner, owned by the same exhibitor, was junior champion.

Honors in the Hampshire hogs were fought out by the Fairbanks Ranch of Redlands, Tarzana Ranch, Owensmouth and Arenal Ranch of Lankershim. The Fairbanks Ranch won grand champion boar with Harvey's Choice and Tarzana won grand champion sow with Florine 2d. Arenal

Ranch won many honors in the singles.

The three Eastern herds of Tamworths were present and split the honors amongst themselves.

The goat show, while not as big as the one last year, numbered 240 head and many of the finest ones in the country were exhibited.

Horses

The horse show was second only to the state fair and Los Angeles. Mrs. Anita M. Baldwin's complete string of Percherons and Mammoth Jacks were there and won many prizes in stiff competition. The Baldwin people are very much pleased at the showing made by the young animals raised on the ranch. The three year old Percheron stallion, Arsar, who was champion at Los Angeles, was again chosen, but the mare colt was defeated by Manon, who is classed as one of the greatest Percheron mares alive today. The San Julian Ranch showed a string of Clydesdales and won all honors.

Falfadale Farm of Perris won most of the ribbons in the grade farm horse division.

SECOND ANNUAL PORK DAY

Kings County again announces her annual pork day. This is the second and will be held at Hanford October 28. At last year's celebration everybody ate pork, talked pork, and 17 carloads of fat porkers were sold which brought \$40,000. Kings County farm bureaus will compete. Premiums offered on farm bureau center carlots are \$350, \$280, \$210, \$140 and \$70.

One hundred dollars will be given to the best ten hogs and other cash prizes running down to \$20 for the fifth best pen of hogs. The best hog draws \$25, with four other prizes running down to \$5. There will be 25 cash prizes for pig club members. Hogs will be judged from the killing out standpoint entirely.

The intention of this effort is to stimulate the production of more and better swine in California, and if this undertaking meets with the measure of success intended it will be the purpose to extend the scope of this work so as to include the entire state in a big annual swine show.

150 HOLSTEINS 150

At Public Auction

State Fair Grounds, Sacramento, Cal.

November 10-11, 1920

Toyon Farm Association, with a total of 350 registered Holsteins on their farms, have decided to consolidate their Holsteins into one herd on the Brentwood Farm, and to conform with present accommodations on this farm, a reduction is necessary. This sale will be the means of making the reduction, and some of the most promising cows and heifers in the entire holdings will sell. The offering will include approximately

100 COWS
of Milking Age30 HEIFERS
Bred and Open25 BULLS
Mostly Ready for Service

The female offering contains the largest number of yearly record cows and heifers, daughters of yearly record dams, and females now on yearly test, that have yet appeared in a western sale. The breeding of the offering throughout is most substantial and popular, and the type of the offering is especially satisfactory. A general summary of some of the individuals and groups includes:

14 DAUGHTERS OF SIR BESSIE FOBES TRITOMIA, who is by Fobes Tritomia Mutual De Kol, and out of Jessie Fobes Bessie Homestead, 34.96 lbs. butter in 7 days as a 4-year-old, 932.74 lbs. butter in one year at mature age, and she topped the Detroit National Sale at \$4,600.00. These are out of dams with records up to over 27 lbs. butter in 7 days, and several out of dams now making good yearly records or with yearly records already completed.

2 DAUGHTERS OF SIR ORMSBY BURKE SEGIS, both with good records and out of good record dams.

A DAUGHTER of Johanna Colantha Champion, with 568.58 lbs. butter to her credit in 296 days as a 3-year-old.

A 24-POUND DAUGHTER of Sir Korndyke Hengerveld De Kol 31st, with 644.30 lbs. butter in one year as a 4-year-old.

A 23-POUND DAUGHTER of Sir Korndyke Hengerveld De Kol 11th, out of a 26.08-lb. 2-year-old daughter of a 31-lb. cow.

A 23-POUND COW with 627.50 lbs. butter in one year, again on yearly test with 443.19 lbs. butter to her credit in 198 days.

A 21-POUND DAUGHTER of Sir Fayne Concordia, with 630.75 lbs. butter in one year as a 4-year-old, out of a daughter of King Segis Pontiac.

A 24-POUND GRANDDAUGHTER of Colantha, Johanna Lad, with 628.66 lbs. butter in one year.

A 23-POUND granddaughter of King Walker, bred to Sir Aaggie Mead.

A 21-POUND 3-YEAR-OLD, with 760.01 lbs. butter in one year.

A 19-POUND 3-YEAR-OLD daughter of Sir Korndyke Pietertje Hartog, with 760 lbs. butter from over 18,000 lbs. milk in one year.

A 4-YEAR-OLD with 403.47 lbs. butter to her credit in 232 days, her dam a 26-lb. cow.

A 19-POUND 4-YEAR-OLD with 358.74 lbs. butter to her credit in 184 days, her dam a 20-lb. 4-year-old granddaughter of Pontiac Korndyke.

A 19-POUND 3-YEAR-OLD with 318.26 lbs. butter to her credit in 137 days. By a son of Vickery Vale, 937.35 lbs. butter from 21,550.6 lbs. milk in one year.

A 23-POUND DAUGHTER of Colantha, Johanna Champion out of a 20-lb. dam.

A 21-POUND granddaughter of Homestead Girl De Kol Sarcastic Lad, out of a 23-lb. dam.

A DAUGHTER of Sir Cascade Blossom Fayne, calving at 19 months has to her credit 379.92 lbs. butter in 244 days. Her dam now on yearly test with over 600 lbs. butter to her credit as a 3-year-old.

A GRANDDAUGHTER of Sir Korndyke Hengerveld De Kol, out of a dam that made 799.20 lbs. butter in one year as a 3-year-old.

A DAUGHTER of Sir Johanna Ruth Fayne, with 320.50 lbs. butter to her credit in 126 days, and bred to Sir Pietertje Ormsby Mercedes 43d.

A 2-YEAR-OLD daughter of Sir Johanna Ruth Fayne, bred to Sir Aaggie Mead.

9 DAUGHTERS OF MUTUAL FOBES LONGFIELD DE KOL, the famous bull whose long list of tested daughters includes several above 30 lbs. butter in 7 days. One of these is out of a 28-lb. dam, two out of 27-lb. dams, and the balance out of dams with records up to over 26 lbs. butter in 7 days.

4 DAUGHTERS OF SEGIS PONTIAC ACME, whose dam is an 885-lb. 4-year-old yearly record daughter of the former world's record cow Riverside Sadie De Kol Burke. All of these either have records or are now on yearly test, and all are out of good record dams.

A 2-YEAR-OLD daughter of Chima-cum Spring Farm King Pontiac, bred to Sir Aaggie Mead.

A 21-POUND 4-YEAR-OLD daughter of Sir Korndyke Ormsby De Kol, with 520.33 lbs. butter to her credit in 278 days.

A GRANDDAUGHTER of Sir Korndyke Hengerveld De Kol, out of a dam that made 704 lbs. butter in one year.

A DAUGHTER of North Star Happy Bonheur, out of a dam that made 799.20 lbs. butter in one year as a 3-year-old.

A 2-YEAR-OLD daughter of Sir Skylark Ormsby Hengerveld, now doing well on yearly test, and bred to Sir Pietertje Ormsby Canary.

A 643-POUND YEARLY RECORD COW, bred to Sir Pietertje Ormsby Canary.

A 17-POUND 2-YEAR-OLD granddaughter of Friend Hengerveld De Kol Butter Boy, out of a 644-lb. 4-year-old yearly record dam, second dam a 24-lb. 3-year-old, third dam a 22-lb. cow with 971.56 lbs. butter in one year.

DOZENS OF OTHERS with records up to over 24 lbs. butter in 7 days, many with yearly records or now on yearly test.

Females of Breeding Age in Calf to These Bulls:

SIR PIETERTJE ORMSBY MERCEDES 43D, whose sire is the world famous Sir Pietertje Ormsby Mercedes, and whose dam, Aaggie Wayne Peep, holds the world's record for butter production for five years, 4,992.03 lbs. from 110,706.5 lbs. milk.

SIR PIETERTJE ORMSBY CANARY, also by Sir Pietertje Ormsby Mercedes, and out of an 862.88-lb. record 3-year-old whose dam made 1,009.87 lbs. butter in one year.

SIR AAGGIE MEAD, by Sir Aaggie De Kol Acme, son of the world's record Aaggie Acme of Riverside 2nd, and out of the 1,215-lb. strictly official record cow Aralia De Kol Mead, her dam the 1,142-lb. former world's record cow Aralia De Kol.

What Are These Things Worth to You as a Buyer?

This is the first entire offering of Federal tested cattle ever made in California.

No animal of breeding age, except fresh cows, will be offered unless believed to be safe in calf.

Note again the splendid breeding of the five bulls whose service these females carry. Their offspring

HAZELWOOD DE KOL HENGVERVELD, by a proven grandson of Hengerveld De Kol and out of the 33.79-lb. cow Bonnie Lass Pauline, dam of Bonnie Ormsby Lass, Grand Champion cow at Panama-Pacific International Exposition.

NORTH STAR HAPPY BONHEUR, who is by Johanna Bonheur Champion a son of the famous show and breeding cow Johanna Bonheur, 890.84 lbs. butter in one year, and by a son of the former world's record cow Colantha 4th's Johanna, 1,247.83 lbs. butter in one year. His dam is a 30-lb. cow with 657.19 lbs. butter in 349 days, and she is by a son of the 813.30-lb. yearly record cow Lady Ormsby. This bull will be sold in the sale.

will carry splendid value anywhere.

There will not be more than three females in the sale with blemished udders.

Every animal positively guaranteed to be a breeder; every animal with individual Federal tuberculin test certificates, and sold subject to retest.

25 Bulls of Substantial Merit

While some of the bulls in this offering would not be out of place at the head of registered herds, yet it is hoped to make the offering of especial attraction to dairymen. A very large percentage of these bulls are ready for service, many of them out of dams now making splendid yearly records.

Plan now to attend this sale, for it is an offering of breeding animals combining qualities of type, production, breeding, and good health such as has seldom if ever been made in a sale of like magnitude in the west.

Tanning Skins

THE Cultivator is repeatedly requested to give information regarding tanning and curing skins for leather or to retain fur. Here are a number of methods which have been given in former Cultivators, now gathered together and repeated in these columns.

Rawhide

The skin should be salted on the flesh side as soon as the hide is cooled after removal, using ten to 12 pounds to a full sized skin. After salting roll the hide tightly. When ready for tanning place the hide in "soak," simply water to remove blood and salt. After being left in this 24 hours the tail and feet may be cut off and the flesh adhering scraped off, after which the hide should be placed in lime water. To make the lime solution take a bucket of water to each quart of lime. When thoroughly slaked and mixed, immerse the skin and allow to lie for

three to four days. Thoroughly wash in cold water. Scour and pound in good soapsuds for half an hour, after which take white vitriol, alum, and salt, one tablespoon each to skin, and dissolve in sufficient water to cover skin. Let remain in this 24 hours. Wring out and dry. To soften, oil with neat's foot oil or currier's oil. It may again be washed out in soapsuds and hung until nearly dry, when it should be worked and softened. If it should remain hard and refuse to soften, repeat the soaking in suds.

Government Formula for Leather

To each gallon of water add one quart of salt and one-half ounce of sulphuric acid. This mixture should not be kept in a metal container. Thin skins are tanned by this liquor in one day; heavy skins must remain in it longer. They may remain in it indefinitely without harm.

When removed from this liquor, the skins are washed several times in soapy water, wrung as dry as possible and rubbed on the flesh side with a cake of hard soap. They are then folded in the middle, hung lengthwise over a line, hair side out, and left to dry. When both surfaces are barely dry and the interior is still moist, they are laid over a smooth, rounded board and scraped on the flesh side with the edge of a worn flat file, or a similar blunt edged tool. In this way an inner layer is removed and the skins become nearly white in color. They are then stretched, rubbed and twisted until quite dry. If parts of a skin are still hard and stiff, the soaping, drying and stretching process is repeated until the entire skin is soft. Fresh butter or other animal fat, worked into skins while they are warm and then worked out again by a hasty bath in gasoline, increase their softness.

Curing Fur

To prepare skins for making ladies' boas, muffs, capes, etc., take the skin off whole by cutting from hock joint across vent to hock joint on opposite side and draw the pelt off over the head and cut off at a point back of ears; or, if the ears are to be left intact, let the cutting be done on a line extending around the point of nose. Then place the pelt on a stretcher made of half-inch board six inches wide at the top and four inches wide at the bottom. Cut this in two parts, from end to end. Stretch the pelt over the two, place edges together and rub salt over the pelt while fresh, and then sprinkle with powdered alum and allow it to dry. When about dry remove from boards and rub with the hands until dry. The skin will then be as soft and pliable as buckskin. Place your pelts where there will be plenty of fresh air, yet not in the direct rays of the sun.

Another method is to tack the skin taut, the fur side under, on a board, and after scraping the bits of fat off, moisten all over and sprinkle with a mixture of seven parts salt and one part pulverized alum. Leave about two days to absorb the salt. Then wet it again and repeat the mixture. About the fifth day wet it again and sprinkle with a mixture of two parts alum and one part salt. When dry it is cured and can be taken off the board. The above is from the "Belgian Hare Guide."

Here is another method of retaining fur:

There are numerous ways to tan a deerskin so the hair won't come out. Many processes will cause the tanned skin to be hard and stiff. The following will leave the hair on, yet the skin will be soft and pliable:

Soak skin in water over night, then remove all flesh and fat. Be careful not to cut the skin. Put good hard salt one-quarter pound, and alum three pounds, in sufficient water to cover the skin. Set over fire and boil until salt and alum are dissolved. When it cools to lukewarm put in the skin and soak five days. Work it well with a blunt stick once or twice every day. Then take it out and dry in a warm place in the shade. When apparently dry heat the tan water again and soak four days, working it every day as before. Then wash in several waters, soaking an hour or two in each. This is to get all the salt

IDEAL GREEN FEED SILO

*Why Experts Selected
the Ideal*

Anyone can manufacture a silo with the same lasting qualities as the Ideal Green Feed Silo.

Anyone can build a Silo of long-lived California Redwood. Anyone can prevent leakage by using heavy refrigerator doors that provide a three-point contact on all four sides.

Anyone can employ the same methods of making the walls sturdy and air-tight.

But the fact remains, that in spite of the many silos being made, the University Farm at Davis selected IDEAL GREEN FEED SILOS.

The agricultural experts at Davis chose the Ideal because of its ability to yield returns long after it has paid for itself. Their judgment in selecting silos should be of advantage to you.

You will find it profitable to investigate the Ideal Green Feed Silo. The coupon will save writing a letter for complete information. Mail it right now.

DISPERSAL SALE

67---REGISTERED
HOLSTEINS---67

Kounias Registered Stock Farms

On Waterford Road, 3 miles east of

MODESTO, CAL.

Thursday, October 28
at 10 A.M.

This is a complete dispersal of one of the largest and best herds in the San Joaquin Valley, including:

21 DAUGHTERS OF KING KORNDYKE HENGERVELD ORMSBY 7TH, who is by a son of Pieterje Mald Ormsby, and is by the same sire as Ormsby Korndyke Lad, the greatest living sire of 1,000 lbs. yearly record daughters.

9 DAUGHTERS OF KING KORNDYKE AAGGIE FAYNE, whose dam is a 33-lb. daughter of King Hengerveld Aaggie Fayne.

6 DAUGHTERS OF A 26-POUND COW that made 723.31 lbs. butter from 17764.3 lbs. milk in one year.

4 DAUGHTERS OF A 20-POUND COW that made 615.02 lbs. butter from 16764.4 lbs. milk in 327 days.

A 29.67 POUND 4-YEAR-OLD daughter of a 26-lb. cow that made 723.31 lbs. butter from 17764.3 lbs. milk in one year.

A LARGE NUMBER OF COWS AND HEIFERS WITH OFFICIAL RECORDS up to over 22 lbs. butter in 7 days.

A CONSIDERABLE NUMBER OF FRESH COWS AND HEAVY SPRINGERS.

ABOUT THIRTY COWS AND HEIFERS bred to King Korndyke Hengerveld Ormsby 7th, or to King Korndyke Aaggie Fayne.

Highly Bred Bulls

Practically every bull in the sale is out of a good record dam and bred in most popular blood lines, including:

KING KORNDYKE AAGGIE FAYNE, the herd sire, 3 years old, a good individual, almost white in color, out of a 33-lb. daughter of King Hengerveld Aaggie Fayne, and by a bull whose sire is a 30-lb. son of King Segis De Kol Korndyke.

A SON OF JUDGE SEGIS, the noted son of King Segis, heading the Hollywood herd in Washington, out of a 20-lb. 3-year-old daughter of a 31-lb. daughter of Sir Skylark Ormsby Hengerveld that made 1127.27 lbs. butter in one year.

A SON OF KING KORNDYKE HENGERVELD ORMSBY 7TH out of a 29.67 lb. 4-year-old whose 26-lb. dam made 723.31 lbs. butter from 17764.3 lbs. milk in one year.

A SON OF KING KORNDYKE HENGERVELD ORMSBY 7TH out of a dam that made 26.06 lbs. butter from 563.4 lbs. milk in 7 days.

A NUMBER OF YOUNG SONS of King Korndyke Hengerveld Ormsby 7th and King Korndyke Aaggie Fayne, out of dams up to over 22 lbs. butter in 7 days.

DAIRYMEN—Practically all of these bulls carry a combination of Ormsby breeding and the blood that produced De Kol of Valley Mead, foundation cow of one of the best Morris families. Both of these lines of breeding are famous not only for large production, but for good type as well.

EVERY ANIMAL POSITIVELY GUARANTEED TO BE A BREEDER; EVERY ANIMAL OVER SIX MONTHS OLD TUBERCULIN TESTED AND SOLD SUBJECT TO RETEST BY THE BUYER, EXCEPT AS ANNOUNCED ON SALE DAY.

Have now established permanent headquarters at new U. & I. Union Stockyards, midway between Modesto and Ontario. Can thus command a wider field of rich dairy and swine breeding interests. 25 yrs' experience buying and selling in the heart of the West. For real service write me at

539 E. Pasadena St., Pomona

Because of high prices for contract work Ventura County is doing much of its own road construction.

and alum out. As soon as the washing process is complete, beat with a wooden mallet until quite soft, then dry again in the shade. From time to time until it is thoroughly dry, rub and work the skin with the hands. This seems a good deal of work, but a soft pliable skin can only be obtained by work.—Rural New Yorker.

Still another: Remove all particles of flesh from the skin and give it a heavy dressing of equal parts of salt and powdered alum wet with a solution made from two parts of water to one part of liquid muriatic acid. Mix the salt and alum thoroughly dry. Mix the two parts of water to one of muriatic acid thoroughly, then use enough to wet the dry substance just enough to make it moist, but not really dripping. Having rubbed this into the flesh side of the skin, leaving a good dressing all over, fold the edges of skin in until they meet in the center all around. Do not let the dressing get on the fur side of the skin; when all folded right, roll up tight and place where it will be cool for 24 hours. At the end of this time examine the hide and, if dry, apply the dressing again and leave for 48 hours well rolled as before. At the expiration of the stated time unroll, stretch on a board and tack firmly in place. Melt up half a bar of soap and add to this as much cottonseed oil as it will absorb by shaking hard. Rub the skin soft as desired; apply this again and rub till about dry. This simple rule followed exactly should insure a smooth, soft, whitely tanned hide and one that should not be troubled with moths or insects. We have had a home tanned wolf skin rug in the house for many years and it has never had a moth in it and it is soft and pliable as need be. This is a simple and reliable rule and anybody need not fear to tan the skins he may get in hunting or trapping.

DISTRIBUTES EXCESS WOOL PROFITS

Distribution of excess profits made by dealers who handled the wool clip in 1918 under regulations of the war industries board is being made by the United States department of agriculture to some 100,000 wool growers, it was announced today. It is estimated by the bureau of markets, which has charge of making the refund from the dealers to the growers, that the total amount of such excess profits was more than \$1,000,000, of which approximately \$460,000 has been turned over to the bureau for distribution.

Some of the dealers who accumulated excess profits have failed or refused so far to refund the entire amount, and the bureau is at work auditing the books of some, interviewing others, and corresponding with still others, in order to bring about final settlements. The dealers who operated under permits signed agreements with the war industries board binding themselves to abide by the regulations of that board which specifically limited their profits.

BUTTERMAKERS SHORT COURSE

October 25 is the opening day for the experienced buttermakers' short course at Davis. Problems in butter-making and ice cream making will be studied the first week, while during the second week attention will be given to the newer tests for butter fat in butter, methylene blue reduction test for milk quality, instruction and practice in mechanical refrigeration, steam boilers, care of pasteurizers, ammonia, machines and the practical problems in dairy machines.

The course will be concluded with a meeting of the California Butter, Cheese and Ice Cream Makers Association and a two day survey of dairy manufacturing plants in the San Joaquin Valley.

Two weeks instruction in cheese making begins October 25, with attention given to the making of cheddar, California Granular, Jack, Neufchatel, cottage and other types of cheese meeting with favor in the California markets.

Muskrat hides, once worth about 36 cents, sold for \$7.50 at the St. Louis fur auction last spring, the United States department of agriculture reports in a recent circular. Fur buyers say the supply of muskrat skins is decreasing at the rate of 50 per cent a year.

Dr. L. D. LeGear, V. S.
S. Surgeon's Robe
(Trade Mark)

Dr. LeGear says:

"Turn more feed into pork"

"Hogs should produce one pound of pork for every five pounds of feed they eat that is equivalent to corn meal in fat, carbohydrates and albuminoid elements. If they do not, their digestive organs are not functioning properly and need regulating and help. And statistics prove that most hogs have ailments or worms in some degree."

Thousands of Hog raisers are making more money, raising bigger and fatter hogs by using Dr. LeGear's Hog Prescription. It helps to put and keep hogs in healthy, vigorous condition, sharpens the appetite, purifies the blood, tones up the system and aids in expelling worms. This is what Hugh Cox, Clifton Springs, N. Y., says:

"I bought a hog that was nothing but a shadow—weighed 90 lbs. After feeding Dr. LeGear's Hog Prescription for six weeks it

weighed 275 lbs. Have used a great many of Dr. LeGear's Remedies and have always found them highly satisfactory."

Husky, healthy Growing Pigs— the Result of

The high development of LACTIC ACID found in LACTEIN Condensed BUTTERMILK supplies the growing pigs with the nourishment and tonic which keeps the organs thoroughly cleansed and at the same time furnishes a most nutritive food for the rapid and strong development of the pig. LACTEIN Condensed BUTTERMILK is a proven producer in the feeding of pigs—and the demand shows how extensively it is used by the hog raisers.

Strawberries—Plant 'em now. **Cash Nurseries, Sebastopol.**

during the hen's fiscal year, which runs from November 1 of each year to the last of the next October. In the laying contest at Storrs two pens of Plymouth Rocks from New York state and one pen of Rhode Island Reds from Massachusetts have already passed this high mark and there are still four weeks to go. That is to say, these three pens with a total of only 30 hens in all have laid more than 6,000 eggs.

The egg production of hens of all breeds and varieties all over the country is declining at this season of the year, more rapidly, of course, in some cases than in others. Three months ago the management of the contest at Storrs expected at least 50 hens to make perfect weekly scores. Last week, however, White Rock No. 130, from Greenville, Rhode Island; White Wyandotte No. 225, from Plymouth, Connecticut, and White Leghorn No. 997, from Mount Carroll, Illinois, were the only three hens out of the entire 1,000 that were able to make a perfect score for the week. There were 54 individual hens, including Barred, White and Columbian Rocks, White and Buff Wyandottes, White Leghorns, Orecons and Russian Orloffs that made 86 per cent. Contrasted with these was one entire pen of ten birds whose batting average was zero.

The total yield for all pens was 2,554 eggs, or a yield of nearly 37 per cent. Hollywood Farm's White Leghorns, from Hollywood, Washington, led all the pens with a score of an even half hundred eggs. A Connecticut pen of White Wyandottes entered by Harry D. Emmons, from Plymouth, was second best for the week with a yield of 48 eggs.

The three leading pens in each of the principal varieties are as follows:

Plymouth Rocks

Jules F. Francois (Barred), 2,116; Oneck Farm (Barred), 2,041; Chickatawbut Farms (White), 1,891.

White Wyandottes

Harry D. Emmons, 1,774; Merrythought Farm, 1,702; Mrs. R. W. Stevens, 1,698.

Rhode Island Reds

Pinecrest Orchards, 2,015; Deer Brook Poultry Farm, 1,827; Jacob E. Jansen, 1,768.

White Leghorns

E. A. Ballard, 1,967; Hollywood Farm, 1,958; W. Edgar Baker Jr., 1,889.

Miscellaneous

A. E. Hampton (Black Leghorns), 1,841; A. L. Anderson (R. I. Whites), 1,745; Oregon agricultural college, (Oregon), 1,679.

NATIONAL FUR PRODUCERS

Rabbit fanciers the country over have united in forming a national fancy rabbit club. With furs in favor as at present there is no reason why the raising of rabbits for their beautiful fur should not prove a most profitable business. In fact, California has many fanciers who are raising some of the finest of these fur producers.

The Tulare County farm bureau ranks second in the state as to number of members and third as to number of farm bureaus represented.

The Associated Raisin Company is having serious difficulty in securing cars to handle its output.

Help your Moulters Moults

Moulting time is the time that a hen needs assistance. It is the off-season in the life of the hen.

Think of the amount of a hen's energy, vitality and red blood that's required to reproduce a thousand feathers! (which is only an average plumage).

A moulting hen needs good health, good appetite and digestion. That's just what Poultry Pan-a-ce-a does for a moulting hen—gives her appetite and good digestion, so that she'll eat more and digest more.

Dr. Hess Poultry PAN-A-CE-A

Helps your poultry through the moult. And starts your pullets and moulted hens to laying.

It contains Tonics that produce appetite and good digestion—Tonics that tone up the dormant egg organs—Iron that gives a moulting hen rich, red blood and a red comb. It contains Internal Antiseptics that destroy disease germs that may be lurking in the system.

No disease where Pan-a-ce-a is fed

Pan-a-ce-a helps your poultry to stay at par during the moult. They don't become run-down, pale and thin. That's why a Pan-a-ce-a hen gets back on the egg job quickly instead of sitting around all fall and winter as a bill of expense while regaining her normal vitality.

Always buy Pan-a-ce-a according to the size of your flock. Tell your dealer how many fowls you have. He has a package to suit. Good results guaranteed.

30c, 60c, and \$1.25 packages. 25 lb. pail, \$3.50. 100 lb. drum, \$12.00. Except in Canada.

For Winter Eggs Use it NOW

RIGHT now—today—when your hens are building up after the molt—when your pullets are maturing and developing their laying organs—give them **Pratts Poultry Regulator**. It costs but a trifle—only about one cent a hen per month—but, as life-long users say, "it does make hens lay."

Pratts Poultry Regulator

for nearly fifty years has been America's most popular poultry tonic and conditioner. It is a medicinal preparation, not a food—a natural tonic and health builder. Used daily at the rate of a rounded tablespoonful for each ten fowls, it strengthens the weakened molters—hastens the growth of the pullets—starts them laying early—helps keep them at it all winter. The extra eggs are clear profit!

Try this plan and get that extra profit. But be sure to use the genuine Pratts. Then we take the risk, because

"Your Money Back If YOU Are Not Satisfied"

There's a Pratt dealer near you. See him at once.

YOU certainly want to save money, and you would like to have better bakings. Then use Calumet. It's the biggest thing you can do to improve the quality of your bakings—and lower baking costs.

Calumet is made in the largest, most sanitary Baking Powder Factories in the World. No Baking Powder is made under better conditions—none can be better in quality.

It contains only such ingredients as have been officially endorsed by the U. S. Pure Food Authorities. An absolute guarantee that it is pure.

**RAISES THE QUALITY — LOWERS THE COST
OF ALL BAKINGS**

**CALUMET
BAKING POWDER**

"BEST BY TEST"

It received highest Awards, World's Pure Food Exposition, Chicago — Paris Exposition, Paris, France—positive proof of its superior merit.

It is used by more housewives, domestic scientists and chefs than any other brand. That would not be the case, if it were possible to secure a higher quality leavener.

It is sold at a moderate price. All you have to do is to compare costs to determine how much you can save by buying Calumet.

Pound can of Calumet contains full 16 oz. Some baking powders come in 12 oz. instead of 16 oz. cans. Be sure you get a pound when you want it.

**Calumet Cream
Cake
Recipe**

—3 cups pastry flour, 3 level teaspoons Calumet Baking Powder, ½ cup butter, 1¼ cups granulated sugar, Yolks of 3 eggs, ½ cup cold water, Whites of 3 eggs, 1 teaspoon orange extract. Then mix in the regular way.

PEARL OIL
(KEROSENE)

Household Department

A TROUBLESOME DOLL

Dolly's lost her arms and legs—
Careless thing to do!
Dolly's gone and lost her head,
Lost her body, too.

Nothing but her wig is left
On the nursery shelf,
Oh, I've told her lots of times
Not to lose herself!

Dolly never, never, does
Anything she's told;
Have to scold her—when I find
Anything to scold!—Doris Webb.

**ALL ABOARD FOR THE FURNI-
TURE ISLANDS**

By Clara Peterson

(Continued from last week.)

"No one except Pussycat Mew and her mother," answered the sea lion. "But for some reason people are always traveling over there to take a look at them. Stupid, I call it."

"Pussycat Mew!" exclaimed Jennie. "Is she really there? O, will you take us over?"

Then she blushed, for the animal had said that the fare was twenty "dots."

"Of course we haven't any dots," spoke up Janie, who was thinking of the same thing.

"No dots!" barked the sea lion loudly, blinking his eyes. "I should think you had thousands of them—millions I might say."

He was looking straight at Janie's right arm, where five bead bracelets swung gracefully. The twins had been so excited over the nursery that they had forgotten to take off the chains Janie had strung. They were very glad of it now, for dots were nothing but beads—yellow and green and pink.

Jennie broke her longest necklace, which was of very fine orange beads, and counted forty into the little bag hanging from the sea lion's harness. Then the twins pulled up the legs of their pink and blue pajamas and stepped into the two seats.

With a great splash the animal (Mr. Bote was his name, he said) slid into the water, but he swam so close to the top that not even the little girls' toes got wet, and they looked around in great delight.

Suddenly Jennie, who was trailing her fingers in the water, felt something cold in the palm of her hand. She jerked it back into her lap, and both the little girls bent over and gazed down.

Three baby sea lions came up and stared curiously at the twins, especially at Janie's necklace, which was dangling delightfully.

Mr. Bote turned his head and stopped swimming.

"Now, see here, Angelina and Ruby and Rex! Didn't you promise to stay home when I gave you the goldfish to play with?"

"But—" squeaked Ruby.

"But—" squeaked Angelina. "Rex ate every one and broke the globe." Rex, who was the smallest and blackest, started to paddle away.

"The bowl was cracked," the twins heard him say. "And I wish I hadn't ate the fish—they wasn't half as good as minnies."

Mr. Bote sighed so that the twins shook in their seats.

"Their mother is attending a convention and I'm just about wild. Now, Ruby and Angelina, you go on the sand and play with shells until I get back. Rex is going to bed without his supper—if I can make him."

The little girl sea lions looked so lonely as they started away that Janie took off her necklace and tossed it to Ruby, who was looking back. She caught it in her mouth and nodded her head a great many times as though saying thank you.

"Divide them," called Janie, and then she and her sister forgot all about the sea lion children, for before them was Westchair Island.

Westchair Island was covered with soft, thick green grass and there was not a thing to be seen but a great clump of pussywillows in about the middle of the island. Mr. Bote waddled up on the grass and Janie and Jennie jumped out of their chairs.

"Pussycat Mew's house is behind those willows," said the lion, plopping into the water again. "Goodbye. Got to get to the fish market before Mrs. Whale closes up."

"Goodbye!" called the children, and waved their hands.

In five minutes they had reached the pussywillows.

Behind the willows was such a fascinating little house that the twin squealed with delight. It was built of gray wood and had two little peaks one on each side of the sloping roof. They looked just like cat's ears. There were two high oval windows which did, for eyes, another for a nose and a broad curved door which was exactly like a pussycat mouth.

"That is a real cat house," said Jennie.

But the house wasn't the best part of it, for there to one side sat the fairy on her little stool, painting busily. Cammie stood beside her yawning, and, posing in the bright sunlight was Pussycat Mew. She looked too good to be true. Her dress was of bright red silk with a long train which curled around her white tail. On her little front paws were snowy gloves and her pretty face was washed until it was as clean as a baby's. She jumped a little when she saw the twins, but Paintetta scowled at her and she picked up her train and smiled again.

Paintetta turned around. "Oh, it's you! Sit down. I'm very busy."

The twins sat down on the grass. Now and then Pussycat Mew blinked her green eyes at them, but no one said a word for quite a while.

"You see," began Paintetta finally "she has to keep very still or her picture won't be right. Since Mother Goose put her rhyme book on the market all the children have been teasing and teasing for pictures. All sorts of artists have been here to paint Pussycat Mew, for the children seem to like her, though goodness knows why. (The kitten looked quite sad at this. However, I'm the only one who can do it decently. A fellow who was here the other day gave her whiskers in the picture, though she never lets one grow out. There goes another brush."

She shook out the hairs which had come undone from the brush in her hand, and Cammie stamped his front feet and said angrily:

"When I made the contract with you, Paintetta, I did not think you would need a new brush every five minutes. And what sort of board and lodging do you give me? My price was entirely too cheap!"

While he was talking Paintetta pulled some fine hairs from his skin and with a thread from her purse tied them to the brush handle.

"Do you come here often?" asked Janie, who thought the subject ought to be changed.

"As often as the publisher wants new pictures," answered Paintetta, sitting down again. "What do you think of this?"

The twins went over and looked at the painting.

"It looks even better than—" said Jennie. She was going to say that it looked even better than the kitten herself did, but she happened to think that that wouldn't be very polite, so she changed it quickly to "It looks even better than I expected."

Pussycat Mew unwound her train from her tail and walked over to them bolding out her paw. Just then there was a loud crash inside of the house and an old black cat ran out. She had on a blue calico dress and wore spectacles.

"Oh, dear," said she. "Paintetta, just dropped the bowl that held your nectar."

"Never mind," said the fairy. "I can eat at Bureau Island and Cammie can wait, too."

"Yes, wait—wait—wait," growled the camel. "I'd like to be something besides a waiter and a paint brush."

Mrs. Cat was staring at the twins. "No more artists, I hope."

"I can't even draw a circle with a compass," said Janie quickly. "And neither can my sister." It was the first time she had ever been proud of the fact.

"Well," said Mrs. Cat, "you may come in and have dinner with us if you care for fish and milk."

Pussycat Mew was inside the door pulling off her gloves and Mrs. Cat led the twins into the house.

**RHUBARB---Wagner's Giant
Plant Now**

September, October and
November are the best Fall
months to plant.
Growers who planted last July and August have
already harvested over 15 tons per acre netting
\$1000 eleven months from planting. For further
information, write J. B. Wagner, Rhubarb Specialist
1850 East Villa St., Pasadena, Cal.

The California Cultivator
Costs Only \$1 Yearly

"I am so glad—" began the kitten,
but her mother shook her head.

"Now hush, Mewlinda, you are en-
tirely too forward, having your pic-
ture painted so often. Be quiet while
I show these visitors the house."

There were two little beds of pussy-
willow velvet and a great fireplace
of brown stone where a long fish was
cooking on a rack. There were many
rugs of mouse skins, which Mrs. Cat
pointed out proudly.

Then she went to the cupboard for
the fish platter and Mewlinda and the
twins sat down before the fire. The
kitten smiled so sweetly that the twins
forgot that she was only a cat, and
when Mrs. Cat called "Dinner" very
loudly they really expected to see a
big round table covered by a linen
cloth and set with rosebud chinaware
and silver.

Instead, Mewlinda led them to a
bench. There were two stools on each
side of it. There were four tin plates
and four tin cups. The cups were
filled with milk and the fish lay cross
the platter in the center of the table.
There was nothing else to eat.

Mrs. Cat was very friendly and told
the twins a great deal about her hus-
band, who had worked for the Marquis
of Carabas, but Janie and Jennie were
so hungry that they could hardly lis-
ten. Each one had a piece of fish, of
course, but it seemed so queer not to
have mother there to take out the
bones that for the first time they felt
rather lonely. Mrs. Cat watched them
drink their milk and then she got up
and untied her apron.

"Mewlinda, take the rack off the
fire. It will melt away."

(Continued next week.)

HOUSEHOLD QUERIES

Fig and Walnut Jam

In Cultivator of August 31 some one
asked for recipe for fig and walnut
jam. As I have not seen it answered,
I will give recipe which we think de-
licious. 1 gallon of fresh figs peeled
and cooked down into jam. Crack nuts
and chop meats, adding to jam about
five minutes before taking from stove.
This is too late for this season, but
be sure to try it next year, the nuts
give it such a delicate flavor.—Mrs.
D. Douglass, Fallbrook.

Grape Syrup

In answer to your call for a satis-
factory way of making syrup in the
Cultivator for September 25, I am
sending in the following recipe which
I have used for years and which makes
the finest syrup:

Syrup from Muscat grapes: Crush
grapes and press to extract juice. Put
juice on stove and heat until hot but
not boiling. To every gallon of juice
use one tablespoon of common baking
soda, putting the soda in a little at
a time so that the juice will not foam
over. Remove any scum formed and
keep on removing until the juice is
clear. Now add more fire and boil
slowly until reduced to three-fourths
of original bulk. Now put juice in
shallow pans and leave on back of
stove for a few days until it is thick-
ened to right consistency by slow heat-
ing. When in the shallow pans be
sure it does not boil, as boiling will
burn it, also darken. When it spins
a thread it is done and may be
strained through cloth while still
warm and will keep indefinitely.—Mrs.
A. B. Tayian, Fresno.

THREE GOOD COOKY RECIPES

By Mrs. J. E. Wilbur

Ginger Cookies

Put the following in a pint basin
as given: Dessertspoon ginger and
two teaspoons soda, on which put 10
tablespoons hot water, 10 tablespoons
shortening, ½ cup sugar and fill up
with New Orleans molasses. Add salt
to flour and mix soft.

Molasses Drop Cakes

1 cup molasses, 1 cup sugar, 1 cup
shortening, 1 cup hot water, 1 table-
spoon ginger, 1 tablespoon soda
(small), 1 teaspoon cinnamon, 1 egg
not beaten, 5 cups flour.

Sugar Cookies

2 cups sugar, 1 cup butter, 2 eggs,
¾ cup milk, ½ teaspoon soda. Sea-
son to suit taste. Mix soft and bake.

The ONE thing
that agrees with
all the family
and that all the
family agrees on

Tillage Implements a Step in Advance

Back in 1831 Cyrus Hall McCormick began the progressive work of building farm implements that measured a step in advance of anything else designed to serve a similar purpose.

This step in advance, resulting from the invention and development of the McCormick reaper, was maintained by Mr. McCormick throughout his busy farm machine manufacturing and selling career. The same progressive policy has been promoted and lived up to continuously by the Harvester Company, following in Mr. McCormick's pioneer footsteps.

International Tillage Implements

which include an implement of the right style and size for every tillage operation, are representative of this "step in advance" policy on the part of the Harvester Company. They are designed and built to put your seedbed in the best possible condition to receive your good seed.

At the store of your nearby International full-line dealer you will find an International tillage implement of a size and type suited to your particular requirements, vouched for by International Harvester reputation which is as broad as world agriculture.

Rock Island
No. 38 One-
Man Tractor
Disc

Close-up
levers. One man
easily operates both tractor and
disc. Extra high clearance. Two
sizes, 8 and 10 feet cut. Solid or
cut out discs.

Rock Island No. 12
Tractor Plow

Successful behind any tractor.
Front furrow wheel lift equipped
with 2, 3 or 4 Rock Island CTX
bottoms that turn the furrow slice
clear over, pulverizing soil and
preventing air spaces.

Quick Detachable Shares

For 12 Years

Heider Tractors have plowed and har-
rowed every kind of soil, and have
performed on every kind of farm belt
work.

The Heider's reputation for power,
fuel economy, and low up-keep is
built on the experience of users over
this long period.

Heider Saves

15 to 20% of parts, by its patented
Friction Drive. No clutch, no trans-
mission gears, no bevel gears. No
gear stripping.

Saves upkeep—fewer parts to wear.
Saves fuel loss. Less power required
to run the machine—more power for
the pull.

Two sizes 12-20 and 9-16—described in
catalog—also Rock Island tractor
tools. Ask for booklet, "The Verdict
Direct from Heider Owners," with
catalog.

Now's The Time To Fertilize Your Trees

And the best way to do it is with the help of Hercules
Farm Dynamite.

Heavy ground should be aerated by blasting around the
trees (just outside the foliage line) when the ground is
hard and dry in the Fall. Dig out the loosened earth
and fill the holes with organic matter, manure, leaves or
twigs.

Try it this Fall—your trees will tell you by the way they
bear next year that they like to be cultivated with

HERCULES FARM DYNAMITE

Send for a copy of the Hercules Powder Co.'s 68 page
book "Progressive Cultivation". Every rancher or
orchardist should have this book for it tells him how to
plant trees, cultivate bearing orchards, subsoil, clear land,
blast ditches and do many other things with the help of
Hercules Farm Dynamite.

Hercules Farm Dynamite is for sale at
leading Hardware and Implement dealers.

HERCULES POWDER CO. 1033 Chronicle Building, San Francisco, Cal.

Gentlemen: Please send me a copy of "Progressive Cultivation."

circular and
prices.

To keep thoroughly posted subscribers should read every advertisement
in the California Cultivator columns.

My K Hand Stump Puller

Gives Your Hand 96,000

Pounds of Power

Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable!—you *alone* can pull with my "K" Hand Power Stump Puller—*without digging and without the expense of teams and powder*. I guarantee it. I refer you to U. S. Gov. officials. I give highest banking references. If you have stump land, the cheapest way of clearing it is with the

Frank Hance, a one-armed farmer of Bowie, Md., pulling a double silver maple 3 ft. 8 in. in diameter at the ground, with deep tap roots. This is an easy pull for the "K," as the cable can be hitched high and the leverage is consequently greater.

K

HAND POWER Stump Puller

How the "K" Pulls Biggest Stumps

The "K" works on the leverage principle of the ordinary lifting jack, except that the power is applied on a cog-wheel instead of a standard. 100 lbs. push on the lever develops a 48-ton pull on the stump—all an inch steel cable will hold. One man operates it alone—no teams to pay for—no walking.

A Mechanical Wonder

Made of finest steel—guaranteed against breakage. Weighs only 171 lbs.—easily carried or hauled about on its own truck wheels. Has two speeds—60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. *Works equally well on hillsides and marshes where horses can not work*

Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes: "The stump puller is a wonder."

Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

Special Offer We are making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write us today for full information and for free book on Land Clearing and about our Wonderful Drag Saw.

Capitalization of Food Production

WHEN the time comes—if it ever does—that the producer is certain of a price which assures a reasonable profit; and when the market is so regulated that the middleman does not exact the pound of flesh from the consumer, thereby preventing quick disposal of the products of the farms, that time will chronicle a rush of “back-to-the-farm” which will silence predictions, often heard these days, of a possible world famine.

The farmer will always be compelled to take his chances with nature. Frost, drouth, heat, cold must all be reckoned with. The farmer is willing to take those chances and to produce largely, but when, in addition, he is compelled to take chances with the market which is largely under the influence of manipulators, the gamble is too great, and banking, merchandizing, or other venture proves more attractive. This is simply the natural course of common sense business and no number of preachments on the necessity of “back-to-the land” avails.

These preachments are very popular on the part of professional people, merchandizers and others, and indeed they may have usefulness if handled from the right angle. The American Farm Bureau Federation is endeavoring to approach the problem from the farmer's standpoint. It is endeavoring to find some method for the farmer to follow by which he may continue to buy all of his supplies at retail and sell at wholesale and not come up against inevitable failure. No other business on earth can stand the handicaps which confront the farmer. For the past five years the appeal to patriotism has been so strong that production has been continued notwithstanding labor shortage and, for farming purposes, capital shortage, and now, as one Riverside fruit grower expressed it recently, credit shortage. This shortage he characterized as so serious that it amounts to a credit panic, and this we believe will result in a great shortage of food production in 1921 unless it is overcome.

The cotton grower, the grain grower, the livestock producer and the producer of some kinds of fruits is today unable to extend his credit or to secure cash on his past seasons productions without serious sacrifice. If this sacrifice is forced upon him there is but one alternative and that is reduction of output.

A recent statement by the federation reviews the present situation:

“We are in an era of uncertainty. We are no longer stimulated by our wartime fervor. Many expedients have been attempted to remedy existing conditions but as a people we have overlooked the basic economic principles upon which the lives of the individual and the nation depend. We need to be aroused to a more thorough study of the important factors which are contributing to the present unrest and uncertainty. We are repeatedly reminded that the world has been impoverished and yet there seems a tendency on the part of everyone to dodge the inevitable.

“We have tried to rehabilitate our country by every method except through the sweat of the brow. Many industries have been stimulated to the point where they have become top-heavy. Liberal credit has had the effect of inflating values. It was recently pointed out by the National City Bank that the granting of unlimited credit to manufacturing industries will not solve our problems. Since the war there has been a highly competitive demand for labor and material. Abnormal credit extension, granted to the manufacturers of luxuries and non-essentials, has been largely expended in driving up wages and in buying material. This has resulted in a higher level of prices which the consumer has had to bear and we seem to be farther than ever from the solution of our problems.

“We are over-industrialized. The superstructure of luxury manufacturing enterprises overbalances the more basic industries. The foundation of business has been neglected—(Continued on Page 571.)

Consistency and its Result

More than twelve years ago Willard built his first automobile starting, lighting and ignition battery—several years before electric starting came into general use.

For more than twelve years the one object on which Willard effort has concentrated has been automobile batteries—batteries that would serve the car owner longer, more efficiently and more reliably.

This consistency, this concentration on one big problem, has resulted in Willard leadership in the automotive battery field, and is responsible for—among many and varied contributions to the industry—the perfection of Threaded Rubber Insulation, the greatest battery improvement in years.

There are today 152 passenger car and truck manufacturers using the Still Better Willard Battery—the only battery with Threaded Rubber Insulation.

Willard Service

This trade-mark is branded in red on one side of the Still Better Willard Storage Battery—the only storage battery with Threaded Rubber Insulation.

Consistent devotion to one aim, the building of a better automotive battery, has resulted in the adoption of the Still Better Willard by the 152 manufacturers below.

One Dollar Yearly

Wanted---Organic Matter by Southern California Citrus Growers

By Robert W. Hodgson

THE outstanding lesson learned in a half century of raising citrus fruits in Southern California is the necessity for recouping soil fertility through the regular and liberal use of fertilizers. And that citrus growers have learned this lesson well is attested by the fact that annual expenditure for fertilizing materials in Southern California has long since passed the million dollar mark. Sufficient information was long ago accumulated to prove conclusively that of transcendent importance in the maintenance of citrus orchard soils in good fertility is organic matter. In fact, elaborate fertilizer experiments conducted over a period of years, coupled with the experience of hundreds of growers extending back over two decades, have apparently indicated that of all the fertilizer elements which have been used in the past only two have given definite and measurable results, namely, organic matter and nitrogen. Not the least interesting feature in this connection is the fact that these two are practically always most intimately associated, which makes it possible to say without fear of contradiction that the future of the whole citrus industry is absolutely dependent upon the securing of an adequate supply of organic matter. Where is this organic matter to be secured?

The Cover Crop

Cheapest is the cover crop. Beginning about 15 years ago the growing of cover crops for organic matter is today practiced on thousands of acres. A large number of cover crop plants have been given exhaustive trial, finally narrowing down to two in number, a native annual clover, *Melilotus indica*, and vetch. A large and valuable mass of information relative to the best methods for growing and handling winter cover crops has been accumulated, so that at the present time the citrus grower who desires can be reasonably certain of obtaining good results with a green manure crop. But still the search for better winter growing crops goes on. Perhaps the best possibilities in sight are purple vetch, the seed industry of which is now well under way, and the new annual sweet clover recently developed at the Iowa agricultural experiment station.

Of more recent development is the summer cover crop. Unquestionably, there is more room for development along this line than with the winter crop. To date the most satisfactory crop developed is the cow pea, particularly the Whippoorwill, although it may well be that varieties of soy beans and velvet beans will be developed or introduced which will prove even better.

Using two cover crops a year, or double cover cropping as it is called, is the most recent development of all and it has many points in its favor. Perhaps the next development will be a closer study of fertilizing cover crops, indirect feeding of the trees by stimulating the growth of the green manure crop.

But the cover crop has its limitations. Its success is very intimately bound up with available supplies of

irrigation water, particularly with summer growing crops. Moreover, for success the cover crop demands considerable direct sunlight, an impossibility in old orchards where the ground is largely shaded. And on certain soils and in certain districts entirely satisfactory cover crops have not yet been found. Orchard cover crops will not solve the organic matter problem, though they will do much to furnish this much needed substance.

Animal Manures

Animal manures furnish an almost ideal source of available organic matter. The big subsidiary purchasing organization of the Exchange last year handled a half million dollars worth of animal manures. Today Southern California citrus growers are purchasing manures in Imperial Valley, Arizona, Nevada and Utah, and are even considering bringing it from Idaho and Montana. But supplies from these sources cannot last forever. Already the end is in sight. Moreover, a decided movement is evident for farmers of these outlying districts to retain their manures at home.

With manure prices sky high—so high, in fact, that many growers are wondering how they can afford to longer purchase them even though available in sufficient quantity—has

come a pronounced tendency toward greater conservation and economy in their use. The old wasteful methods of application are being done away with. Surface spreading is giving way to underground application and better methods of storage and handling are being developed all the while. Purchasing by analysis has come to be the rule rather than the exception as it was five or six years ago.

The use of manure substitutes in the form of inert organic material, so devoid of bacteria that its decay stopped ages ago, is rapidly increasing in extent. Peat and muck are now being mined in large quantities and shipped to citrus growers for use as fertilizer.

Other Sources

In the search for other sources of suitable forms of organic matter, citrus growers of recent years have become large consumers of bean straw, spoiled alfalfa hay and other materials of a bulky nature and analyzing from one to two per cent nitrogen, such as cotton balls and the like. Hundreds of tons of bean straw are yearly used as manure substitutes, and with excellent results, this material having been found about twice as valuable in fertilizing elements as the usual run of stable manure. Alfalfa hay has about the same or even a little higher

fertilizing value and is rapidly coming into greater use. But the supply of those materials varies enormously from year to year, as does the price. Three years ago more than three times as much bean straw was produced as is available this present season. And three years ago alfalfa hay could be purchased at half the price at which it can be had today. And the higher the price the more valuable do these materials become to the livestock man who can utilize their feeding value and then recover from 50 to 70 per cent of their fertilizer value in the form of manure.

Biennial sweet clover, *Melilotus alba*, produces a heavy tonnage of green stuff and is now being grown on low lying lands where water is cheap, the forage cut and used for fertilizer on orchards. Here seems to be a promising means of solving the problem, utilizing cheaper waste lands for the growing of organic matter to be used on citrus orchards. All the promising plants furnishing large quantities of organic matter should be given a trial along this line, including certain of our vigorous growing lupines, sesbania, and other crops.

Greater Diversification in Farming

Perhaps the ultimate solution—certainly one of the most fundamental and desirable—is greater diversification in farming. Southern California agriculture, and particularly the citrus industry, is today the victim of too intense specialization. The raising of livestock—dairying, swine raising, and feeding beef cattle—has until recently been a very minor part of the agriculture of Southern California.

Here and there may be found growers who have gone into livestock raising in order to meet the fertilizer requirements of their trees. At least a half dozen dairies are operated in connection with citrus orchards, purely for organic matter. The dairy cow makes a good partner for the citrus tree. Swine raising has been adopted by a few and with excellent results. Hogs and oranges, if properly handled, make a successful combination.

Of recent years has come the slogan, "A hen to the tree." Poultry manure is generally regarded as perhaps the best for citrus trees, and many growers are now linking up the hen and the orange or lemon to good advantage.

The most recent suggestion along lines of greater diversification is the establishing of stock feeding yards in various parts of the citrus districts where feeder stock could be finished off for market and the fertilizer used on neighboring orchards. Many growers feel that the value of the manure thus secured would greatly exceed the cost of shipping the feed in, and certainly the best place for manure to be made is near the point of use.

Other means for solving the organic matter problem will no doubt be devised in the future, but the writer feels that the last one mentioned, namely, greater diversification, is perhaps the most promising. A greater utilization of all possible methods will no doubt effect its solution, and solved it must be if the citrus industry is to endure.

Bagging Grapes

Mr. Howard's answer to a query as to bagging grapes, given in the issue of October 16 on page 516 of the Cultivator, induces C. W. Dayton, in the hills near Owensmouth, Los Angeles County, to send in a suggestion as to his practice with some of the late grapes. Dr. Dayton writes:

When I lived in the valley I had no trouble with birds removing the paper bags, but here in the mountains I found there were birds that would remove the paper bags about as fast as I could put them on.

Also, there were mice, rats, coons, rabbits, squirrels, coyotes, badgers and about six kinds of birds, besides linnets and hornets. Some birds begin to suck the juice while the grapes are green and rabbits eat them green.

The mountain grapes stay good without rotting all winter until April or May, sometimes, so that we have them fresh off the vines every day. Often we sell some for 12 to 15 cents per pound in the winter.

I think these screens cost about two cents per pound for the grapes, but I have had these same screens for from ten to 15 years and they are yet as good as new. I made one or two thousand and use them every season and would not think of doing without them.

I make the wire long enough to go through and wind around the limb of the vine to prevent wind from blowing them back and forth and cutting off the stem. I use about four sizes of these screens up to six inches in diameter and 12 inches long.

In the mountains the bunches of grapes are more compact and smaller than in the low country, but better in flavor. We put the screens on while the grapes are about the size of peas. I have ten or 12 varieties of grapes up here. Thompson and

Sultanas do not do well in the mountains. Moore's Early, Concord, Niagara, Catawba do well, but the ones we have the most of are Mission, Rose of Peru, Tokay, Grenache, Sweetwater, Hamburg, Red Emperor, Malvoise, etc. Hornets do not go inside these screens, nor honey bees.

Cylinder of Wire Screen for Protecting Grapes

Cylinder is made from regular wire screen such as that used on doors and windows, cut about six inches wide and 10 or 12 inches long. This is rounded into a cylinder and touched with solder in four places where the ends lap about a quarter of an inch. Then a circular (or eight-square piece) about three inches in diameter has been cut for the lower end of the "bag" where it is held in place at four points by a touch of solder. The upper end was left open. The cylinder is placed over the bunch of grapes, when nearly full size but still green, and closed at the upper end with a zinc disk clamped so that a single wire run across after the cylinder is placed over the grapes effectively locks the container and prevents birds, bees and rodents from reaching the fruit.

Agricultural News Notes of the Pacific Coast

Northern California

Oroville will hold its orange and olive exposition November 15-20.

Butte County is looking for an assistant county farm adviser.

California has 117,690 farms, according to the figures of the census bureau.

Oroville, Butte County, will hold an orange and olive show from November 15 to 20.

California Fruit Distributors report much improvement in the refrigerator car situation.

The Hayward chamber of commerce is considering establishing a poultry demonstration plant.

Farm bureau meetings will be held in Placer County at Mount Vernon, October 23; Roseville, 25; Colfax, 27.

The first auction sale of the 1920 crop of rice was held in Sacramento, October 18, about 50,000 bags being sold.

The Agricultural Legislative Committee met in San Francisco last week to discuss the anti-Japanese amendment.

The enlarged rice mill at Woodland, Yolo County, began operations on October 18 with a capacity sufficient for local needs.

Sheep from many points in the north are being moved to the vicinity of Stockton to feed on the refuse in beet and bean fields.

Olive growers of Butte County have sent a delegation headed by B. B. Meek of Oroville to ask congress for a tariff on olives.

The second annual farm bureau fair held at Anderson, Shasta County, attracted 10,000 visitors. The hog show was a big feature.

Colma, San Mateo County, has a violet field of eight acres, the largest in the state. 150 dozen bunches of flowers are picked daily.

The Livermore Valley, in Alameda County, had received to October 16 a rainfall of 1.75 inches, considerably above the average precipitation.

The embargo on sheep movements in the Cloverdale-Geyserville-Hopland district will soon be removed, as the local infestation of seabies is now under control.

D. F. Hollenbeak of Whitmore, Shasta County, is making maple sugar from native trees and the state forester states the quality is as good as the Eastern product.

Director Hecke reports that the asparagus beetle, which infests several hundred acres in Northern California, is very easily controlled by spraying, if done at the proper time.

Representatives of many farm organizations met with the board of regents of the state university at Berkeley on October 13 to discuss needs of the agricultural industries before shaping up the annual budget.

Report comes from Washington that Japanese have no further hope of defeating the anti-alien law to be voted on by California this fall but will appeal to the courts to nullify it on the ground that it is a violation of the federal constitution.

The Poultry Producers of Central California is urging a tariff on Australian eggs "at least equal to the 12 cents a dozen protection which Australia has against our eggs and which prevents us from exporting eggs thither in our flush season."

Central California

Manager Niswander of the Peach Growers says that half the peach crop has already gone East.

Members of the Peach Growers Association expect to receive around 16 cents for their dried fruit.

The Stanislaus Sweet Potato Growers Association has 400 members, representing an acreage of 5,000.

Stanislaus County is harvesting sweet potatoes. At least 1,000 earloads will be sent out this season.

The Tulare Cooperative Poultry Association did a business amounting to \$20,000 for the month of September.

The boys of the Kern County High School Agricultural Club will hold a hog sale of their own at Bakersfield, October 30.

Olive growers of Lindsay, Exeter and Porterville districts of Tulare County have formed a pool for marketing their crops.

Many applications for farm units were made at the Delhi Settlement. Work is being rushed on building of houses for new settlers.

The cotton gin building at Shafter, Kern County, has been completed and the machinery is being installed. It will be a ten stand roller gin.

The Merced-Stanislaus Sweet Potato Association announces the present crop as less than last year's but quality and prices good and market firm.

A short course in tractor management will be given at Stockton the third week in November. It will be conducted by L. T. Fletcher of the university farm.

During the 12 months ending October 1 seven counties comprising the California Farm Bureau Marketing Association sold fat hogs to a total of a million and a half dollars.

It is estimated that the olive crop of the San Joaquin Valley between Reedley and Porterville is between 5,000 and 6,000 tons, only 1,500 tons of which have been contracted to date.

The California Cooperative Canneries have announced that new machinery has been installed in their Visalia plant to make into oil all the surplus olive crop of the valley, no canning to be done on account of adverse market conditions.

The California Associated Raisin Company will control 150,000 tons, or six-sevenths, of the entire state raisin output. Although the crop is short as compared with former years, the growers will receive more money. Last year's prices were on the basis of 10 cents per pound. This year's prices will be on the basis of 15 cents.

The raisin crop for the state for 1920 will not be more than 175,000 tons, according to estimates made by California Associated Raisin Company officials. Last year the state crop was approximately 195,000 tons. The shortage is largely due, according to Wylie M. Giffen, to frost in the early spring and extreme hot weather during the month of June.

Prices for cotton picking in the San Joaquin Valley have been named by the board of directors of the Valley Fruit Growers Association. The price for picking short staple and Durango cotton was set at 2½ cents per pound, long staple at four cents per pound. It is estimated that at least 10,000 pickers will be required to care for the crop in the San Joaquin Valley. Work is now in full swing.

Southern California

Bean cleaning has begun at Wintersburg and Smeltzer, Orange County.

Two carloads of walnuts were shipped from Santa Ana October 5.

The Santa Ana Register is urging necessity of agricultural training in the high school.

The cotton growers of the Palo Verde Valley are paying two cents a pound for pickers.

Wideawake farm center is the newest in Imperial County.

Growers of seed beans in the Carpinteria Valley report beans testing way above the standard.

The first shipments of nuts from the Santa Ana Walnut Association packing house went to Boston.

Indio date growers are still hot on the trail of thieves who are taking their valuable fruit.

During the first three days of the Southern California fair at Riverside there were 25,051 paid admissions.

The Oxnard beet sugar factory will close for the season November 1. No beets were received after October 25.

The plant of the Imperial Ice and Development Company at Brawley was burned last week, together with 13 freight cars.

The Santa Ana Walnut Growers Association employs 200 women in its cracking plant and expects to be able to use 100 more.

A new oil refinery with a capacity of 1,000 barrels a day and to cost \$180,000 will soon be erected at Yorba Linda, Orange County.

The Puente Valley Walnut Growers Association has forwarded its first shipments to the East. They were sent by water to New York.

Engineer H. C. Gault will make a report to Congress, December 6, on the feasibility of an "All American" canal for Imperial Valley.

A plant to manufacture potash from kelp has just been completed on the Taylor ranch north of Ventura, a concrete structure 60x150 feet.

The packing house of the Carpinteria Walnut Growers Association opened for work October 11. The dropping of nuts has been slow.

Cotton picking in the Perris Valley, Riverside County, started October 18 with an estimated crop of 600 bales. The new cotton gin is also operating.

Bean threshing in the Carpinteria Valley of Santa Barbara County has come to a close. Good crop on low ground; on the uplands rather short.

Horticultural Commissioner Sharp of Riverside County has been visiting the Palo Verde Valley explaining the new quarantine regulations on cotton.

The Anaheim Manufacturing Company has incorporated in Orange County with a declared capital of \$150,000, to make fruit drinks and similar products.

The cracking plant of the Santa Ana Walnut Growers Association opened October 18 and within a month the present force of women will be increased to 200.

Riverside County supervisors are framing an ordinance requiring all beekeepers of the county, whether commercial or not, to register their stands. This will enable the bee inspector to keep track of isolated colonies which often harbor disease.

The Coast and General

Montana caught its first killing frost September 29.

Colorado potato shippers report a very slow market.

Texas pecan growers are talking of a 25 cent price on their nuts.

The Affiliated Fruit Jobbers Conference convened in Kansas City last week.

Wyoming complains of dry weather that will not allow of seeding of wheat and rye.

At the sheep sale held at the Washington state fair 424 head were disposed of.

Prune drying in the Willamette Valley of Oregon has been held up by rainy weather.

Hop growers of the Yakima Valley, Washington, find lighter yields than they had estimated.

Josephine County, Oregon, farmers have united in forming a cooperative marketing organization.

Snow storms in northwestern Colorado have leveled grain and frozen many of the truck crops.

Cider and vinegar makers at Spokane, Washington, are paying \$9 to \$12 a ton for evil apples.

Sweet potatoes have proven a profitable crop on the cut-over piney woodlands of central Louisiana.

Two thousand acres, formerly dry land, will be put under water at Leavenworth, Chelan County, Washington.

The Oregon Poultry and Pet Stock Association will hold its winter show at Portland, December 3-13.

California is the second state in the Union as a producer of onions, being a close second to New York.

The grain of Walla Walla Valley, Washington, is a 95 per cent thresh. The season is later than usual because of rains and damp weather.

The federal horticultural board is considering necessity of quarantining Alabama because of the presence there of the Mexican bean beetle.

The upper Columbia Valley reports the finest crop of apples ever harvested in that section, the fruit being practically free from codling worm.

Two hundred and sixty Indians were taken to Yakima Valley, Washington, to work in the hop fields. The season is now closed with a 20,000 bale crop.

The newly organized Holstein Association of Washington will hold a meeting at the Pacific International Livestock Show in Portland, Oregon, November 19.

A diversion dam has been completed across the Rogue River at the site of Savage Rapids dam. It will divert water for use in the Grants Pass irrigation district.

Cooperative dairymen in Oregon have taken into court the matter of contract enforcement between themselves and certain milk distributors. Decision is not yet rendered.

Holstein breeders of Washington met recently at Yakima and formed a state association. F. S. Stimson of Seattle was chosen president and R. L. Rutter of Ellensburg, secretary.

Linn County fair grounds at Albany, Oregon, have been greatly beautified and made more efficient for fair purposes by the erection of a large number of barns and new buildings.

Avocado Advocates Address

By One of Them

IN the convention hall of the Hotel Green, Pasadena, on October 9, three speakers addressed the audience on "avocadan" subjects, freely interspersed with stories. In the following synopsis we have eliminated the latter, though all of them were good and several of fine application. The first speaker was Ernest Branton on

* * *

A Third Century With Tropical Fruits

In looking back over the past 33 years residence here it seems strange that the avocado and other tropical fruits did not earlier gain favorable recognition, for they have been here for nearly a century, and some of them possessed a flavor second to none we have today. As I have had a hand in growing and distributing this class of trees since 1887, I early took note of all that were growing in this vicinity. There were many parts of Los Angeles and the San Gabriel Valley where tropical fruits, especially avocados, cherimoyas and sapotes were grown, but of these the avocados were of the Mexican type and generally small and sparse of flesh, though excellent in flavor. Little selection and growing from seeds was practiced, for there was no local market and several years were required to bring the trees to fruition.

The best local fruit sampled by me a score of years back grew on a street corner in Tustin, Orange County. I well remember that on September 17, 1901, now more than 19 years ago, standing beneath this fruiting tree with Sam Tustin and the late Dr. A. J. Cook, discussing the merits of the crop above our heads. They were nearly round, very black and, as near as I can remember, about three inches in diameter. The tree was of good size and had fruited for several years. It must have been planted about 1880. It still is bearing fruits, although surrounded by oiled streets and concrete walk and curb.

About 1890 J. C. Harvey began the distribution of seeds received from Mexico and Mr. Murietta has told you somewhat of the history and progress since that time. In those days I was often at the Harvey, Murietta, Budington and other places watching the development of these trees. So too, about that time (1894) the plant firm I was with, Lyon & Cobbe, received an order from Lewis Bradbury for all the seedlings we could procure and I have wondered if the lot I collected did not contain the original Spinks tree.

In closing I wish to make a plea for an amendment to the present fruit standardization law that shall include avocados, that we may know at least when they are legally ripe. For even the grower does not always know when to pick. Some of the purple-black varieties are not ripe when fully colored and others must be picked before they are. The latter is true of one of Mr. Knight's most excellent introductions. This calls to mind that the last named variety I ate was a Knight, presented by Mr. Knight, and do not hesitate to state that I never ate a better avocado; so will close by saying "good Knight."

D. W. Coolidge followed with:

* * *

Seven Truths About the Avocado

Truth 1. The avocado is one of the most beautiful evergreen trees that

grows. Its spreading branches afford shade and comfort to man, mocking-bird and mealybug. Why plant pepper, acacia and other trees where you can grow the avocado?

Truth 2. The avocado tree can be, and is, successfully grown in California, particularly in the southern part. I haven't the exact figures, but I am assured that there are today more than 500 acres of avocado trees planted in orchard form, and perhaps as many more are grown in the gardens surrounding our homes.

Truth 3. The avocado tree will grow and bear fruit as regularly as any other fruit tree when the proper varieties are planted in proper localities in Southern California, and contrary to the belief of many the avocado is not over particular about the kind of soil it is grown in. I have seen very fine fruits grown in adobe, light sandy loam and decomposed granite soils. Although the tree is indigenous only to the tropics, we have varieties fully as hardy as any of the citrus, and the scope of this industry is wider than is generally believed. In beginning the industry we have all planted many inferior varieties, but each year we are gaining knowledge, and in planting nowadays we eliminate some of the varieties that a few years ago seemed desirable.

Truth 4. The fruit of the avocado is about the most tasteful and nourishing food that grows out of the ground. I repeat what I said at the dinner at the Maryland two years ago. I would persist in eating avocados if I knew they were a little less poisonous than arsenic, I like the taste so well; and if they were as bitter as quinine and in every way disagreeable to the palate I would continue to eat them, knowing their beneficial effects as a food and medicine. I maintain that the most delicate stomach can take the avocado when animal fat would upset it. I have heard that if one about to embark on a sea voyage would eat no other food than the avocado for the preceding 24 hours seasickness would be unknown.

Truth 5. Growing avocados has proved the most profitable of any horticultural experiment yet conducted in California. You all know for what this fruit is selling. From \$1 to \$2 each for fruits weighing a pound or more. One of our largest growers assured me that he had received as high as \$14 per dozen wholesale for his fruits and that a great part of the crop was marketed at from \$7 to \$9 per dozen.

Now it doesn't seem to me that any such prices will be obtained when we have thousands of acres of avocados where we now have a few thousand trees, but I maintain that there can never be any serious overproduction because there are only two small areas, Southern California and Southern Florida, where the avocado can be grown, and when it is considered that perhaps only about 1,000 growers living in the two favored sections have to grow this valuable food product for 100,000,000 people, I ask the question, How is it possible to overdo the avocado business? Another point, when we consider the proportions that the citrus product, merely a confection, has reached, what should we expect from the avocado, an all around food that

people will continue to buy because they like its taste and because of its nourishing food value. The government experts figure that a pound of avocado has as many food units as a pound of meat or eggs, and should it ultimately sell on this basis, there is 25 to 30 cents each for fruits weighing a pound. I really believe when the time comes that I can have avocados for 366 days in the year, I will cut meat entirely out of my diet.

Truth 6. One hundred years from now history will record that the highest civilization will cluster around the sections where the avocado is grown. The strongest people physically and mentally, the happiest and most beautiful children will be those who make the avocado, instead of meat, their daily diet. I have often marveled how babies and very young children take to the avocado at once. If I have a greater love for anything than the avocado, it is for ruddy, happy children.

I am one who has always believed in the human race, who has always believed that man is constantly rising, and while I am not a strict vegetarian, I have almost reached the point that I do not wish to be a participant in the slaughter of beautiful animals simply for food. I am sure I could never content myself on a diet of turnips or starchy vegetables alone—we must have fats; but the avocado comes in to fill this need. I say, speed up avocado growing, hasten the day when we can have a sufficient quantity of this fruit so that it may be sold at a price that all can afford.

Truth Seven is a definition of a lost opportunity. Everyone living in Southern California has the opportunity to possess for himself and family this most delectable of all foods. Every day that he fails to plant from one to 100 trees is surely a lost opportunity.

R. W. Hodgson finished with

* * *

Avocado Culture Now a Commercial Industry

Having followed the development of interest and the growth of knowledge regarding the culture of the avocado in Southern California for a period of years, I am forced to the conclusion that the raising of avocados in Southern California has now reached the stage of a commercial industry. The avocado as an addition to the list of fruits raised commercially has "arrived" and it probably would have reached this stage before this time were it not for the long remembered freeze of 1912 and '13, the famous heat wave of 1917, and the unusual shedding of fruits occurring the following season. These setbacks to the industry, however, were in themselves of very great value in that they demonstrated the entire unsuitability of certain districts for avocado culture and the weakness of a large number of varieties under test, materially reducing this number and thereby greatly aiding the industry in establishing it upon a commercial basis.

In the first place, sufficient experience has been accumulated to quite accurately outline the area in which avocados succeed in Southern California, and this area is sufficiently large to make the potential avocado industry of considerable magnitude. Secondly, at the present time it ap-

pears that there are in the neighborhood of a thousand acres planted to avocados in orchards from an acreage which must be considered as of commercial size. Then, too, there exists an ever increasing body of knowledge regarding cultural methods adapted to the raising of this fruit. Again, and of the greatest importance, the list of standard approved varieties has been reduced from more than 200 to five which are generally agreed upon as having qualities adapted to the commercial production of this fruit. Fifth, there exists a substantial and growing market demand for the product. And, lastly, the industry is now receiving recognition throughout the rest of the world as having reached the commercial stage in Southern California. Applying all of these tests to avocado culture clearly indicates that it has passed well into the commercial era.

I have been certain that the avocado would eventually reach the commercial stage ever since I became interested in this industry and for a number of outstanding reasons. American consumers are today showing a much greater interest in new and strange fruits than ever before. The publicity given to tropical and subtropical fruits by the federal department of agriculture and the various colleges of agriculture is no doubt largely responsible for this condition, but the fact remains that today it is much easier to introduce a new fruit to the markets of this country than ever before, a fortunate condition indeed for the growing avocado industry. The marked excellence of the product is another outstanding reason why the avocado was destined to become a commercial fruit. There is no other fruit like it. It possesses neither the acid nor the sugar of the usual fruits to which the American public is accustomed. Its rich nutty flavor makes an instant and almost universal appeal once the consumer becomes acquainted with it. On the basis of nutritional value, the avocado has no competitor. The ripe olive, which most closely approaches it both in flavor and analysis, during the past 20 years has grown into a great industry in California. The avocado is all ready to serve when ripe and does not need any process of curing or preserving to render it edible. On the basis of nutritive value it can be placed on the market at a price at which it need not fear competition with any other food product. Then, too, varieties exist so that a constant supply of fruit may be placed on the market all the year around, a factor of no little importance in establishing a new fruit in the markets of this country.

REMEDY FOR SLUGS

Slugs are becoming of increasing importance as pests in gardens and on ornamentals in California. The Oregon agricultural experiment station has recently issued a bulletin on the control of these pests, from which the following valuable suggestions are taken:

Many of the poisons in common use as insecticides are of questionable value in controlling slugs. Bordeaux mixture, either liquid or dry, is an excellent repellent. Calcium arsenate prepared as a bait is readily devoured and is highly toxic to slugs. A combination of repellent and a poison bait constitutes the most effective control procedure.

In our tests Bordeaux mixture 4-4-50 sprayed on the plants combined with the use of a poison bait of calcium arsenate, 1 part to 16 parts chopped lettuce scattered in small heaps over the affected area gave a high degree of efficiency in plant protection and slug control.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

EDITORIALETTES

It is stated that recent reductions in farm products prices mean a loss to farmers of from one and three-quarters to two billions of dollars. We haven't noticed any particular suffering on the part of shoe dealers and others because of this reduction. There seems to be ability to hold up prices until a sufficient number of months has elapsed after the farmer has sold (or given away) his hides for a nominal sum, until prices shall return to normal. We did, however, but a few days ago see a window filled with shoes. One pair was marked "\$4.00 Off the Price of This Shoe"; another, "\$5.00 Off This Shoe," and so on. Inquiry developed the fact, however, that the "\$5.00 Off" shoe had originally been marked at the nominal price of \$26, still leaving \$21 as its retail price. A most commendable sacrifice! The farmer, however, gets his reductions at first hand and two billions of his wealth is taken off with the first sag in the market.

Prof. Reed of the University of California suggests "Prune orange trees for fruit; not for firewood." "An orange tree left to itself becomes so dense that many branches suffer from overshadowing and fruit wood dies." Perhaps this is advisable as to oranges, but as to lemons we are not so certain that the firewood production might not be preferred. For in-

stance, we recently saw one cord of wood delivered in the city of Los Angeles for which the dealer was paid \$32. That surely beats growing lemons. However, next Tuesday is election.

"There is only one better man than the man who gets behind and pushes, and that is the man who gets ahead and pulls." The trouble is we often want to wait until we "get the pull" rather than pitch in and develop one.

The United States has about one-sixteenth of the earth's population, yet produces one-fourth of its wheat and three-fourths of its corn and cotton.

Nursery agents of the East are working a cute one. As an inducement to buy their wares they contract

VOTE "YES" ON "9—HIGHWAY BONDS"

We believe our state papers have as a rule given more energy and space to discussion of compulsory vaccination, chiropractic, poison act and a few other of the measures that will appear on our ballot next Tuesday than they have to the one most important—to the farmer at least—"9—Highway Bonds."

This initiative measure does not call for increasing the bond issue. Read on your ballot: "Directs cancellation of unsold forty thousand bonds, etc." In other words these bonds which were almost unanimously authorized at a former election are to be cancelled and a reissue made at a rate of interest which will make possible their sale. While the dollar of today has half the purchasing value of that of five years ago, its value from an interest standpoint has increased by approximately 50 per cent. In other words, it takes more money to buy money. But the demand for cheaper production and cheaper transportation is so insistent that we are compelled to look for a greater extension and improvement of our road system. The bonds formerly voted commanded four per cent. It is necessary to pay around six even with such magnificent security as that of California. And as the fundamental law of this state demands that all bonds shall be disposed of at par the only possible way of securing the money for the state's advancement is through the proper rate of interest.

Vote "Yes" on "9—Highway Bonds."

to prune and to spray the trees, once they are planted in orchard form, for a period of five years. The contract is not signed by a responsible nurseryman but simply by the agent. A limited imagination only is necessary to determine how carefully such a "contract" will be fulfilled.

Corn grown in the Argentine is now being sold in New York at 40 cents per bushel under American grown corn.

We recently saw the claim that "the crime of this age is the waste of leisure time." It seems rather an overstatement, but when we look at all the cost of this waste of our leisure, the loss of opportunity and all, perhaps it approaches crime. Look at the entrance to any of our movies, football and other games, and it seems that the world is demanding that its amusement be handed to it without effort—never mind the quality. Swimming, tennis, golf, baseball—not from bleachers but on the diamond—and other real life giving sports and recreation do not seem to command such a following as do the more passive amusements which neither exercise, improve nor inspire. Perhaps of all who would seek pleasure the farmer is most justified in asking for passive amusement, for his day ordinarily is filled with "re-creative exercise." But even he may well be content with less slush and jazz. If holding the baby by the fireplace or playing a few educational games with the kiddies, listening to one of the world's greatest artists in vocal or instrumental music which is made possible by a well selected library of phonograph records, does not afford sufficient entertainment and uplift for one evening, there are still a number of good books made and in the making. But possibly we have forgotten how to read.

Poultry people have an eye on initiative "No. 7—Prohibiting Vivisection," and will vote unanimously with a big X opposite "NO." At a recent meeting called by the state board of health in San Francisco, S. S. Knight of Petaluma said: "Last year the poultry products of California brought into existence over \$40,000,000. This proposed initiative measure No. 7, if enacted, will do one of two things. You people who live in the cities are either going to see the price of eggs doubled or you will have to get your eggs from outside the state. That is, the poultrymen will either have to go out of business because they will lose money, or they will have to raise their prices." * * * About 25 years ago we had our first serious setback, when an epidemic of chicken-pox broke out among 21,000 hens on one ranch. Four

or five of the largest poultrymen were put completely out of business by this outbreak. Immediately investigation was begun, which investigation continued over a period of years, and every bit of this investigation would have been proscribed had this initiative Number 7 been in force at that time. As a result of these investigations we know the thing we have to do is to vaccinate against this disease." All producers vote "No" on 7.

The poisoned olive scare has largely passed. The federal department of agriculture, the state department and the state university have united in finding the cause of the trouble and recommending procedure in the future. The case is exactly along the same line as other poisoning cases in former years with sausages, with canned fruits and vegetables and even with cheese. The consuming public now understands these cases and the precautions which are being taken by processors and shippers give reasonable assurance that another case of poisoning will never occur, or if it does it will be so rare that, like the canned vegetable scare, it will have no effect on the amount of this healthful fruit to be consumed.

MASKEW RETIRES

Frederick Maskew, California's chief quarantine officer, retires after nearly a third of a century in public service, mostly inspection or quarantine work. Regarding Mr. Maskew's service, State Director Hecke says: "The great value of the horticultural quarantine work under Mr. Maskew's supervision at once becomes apparent and I feel that I am voicing the sentiment of all when I say that under his supervision was developed the foremost plant quarantine service in the world."

SINGLE TAX

Referring to a short editorial note in the issue of October 16 in which we spoke of land equalization as possible through means other than the single tax an Eldorado County subscriber writes:

"Personal property is created by individuals. It is private property. When we take part of a house or crop or livestock, we violate the right of private property and in the name of the state commit robbery. But when we tax ground values we take from individuals what does not belong to them but belongs to the community. The value of the land has no reference to production or the cost of production, as has the value of houses, horses or other things; for land is not produced by man, it was created by God. It was not made for certain people but for the human race as a whole, to make a living from. The value of land does not come from the exertion of labor on land, for the value thus produced is a value of improvement. That value attached to any piece of land means that that piece of land is more desirable than the land which other citizens may obtain and that they are more willing to pay a premium for permission to use it. Justice therefore requires that this premium of value shall be taken for the benefit of all in order to secure to all their equal rights."

As to the Creator we grant the claim of our subscriber, but we also recall that the Sweet Singer of Israel at one time remarked regarding the man who fears the Lord: "His seed shall inherit the earth." Inheritance has been passed on from father to son ever since that song was sung and to begin today to declare that inheritance invalid, to destroy our love of our own homes because of a claim that all the earth should be possessed in common appeals to us as not only unwise but unpatriotic. We believe the strongest incentive to love of our country comes from the fact that our country stands for the protection, the very preservation of our home life. The present tendency in this state is toward creating a greater number of small home farms. The truest American citizenship is developed in such homes.

The farming lands already have a great enough burden to bear without taking the entire burden of taxation. The census has shown the drift to the cities (where most of the personal property is possessed), to be increasing every decade. Why drive all people into the same effort to secure more stocks or bonds or personal property wealth?

Take a look at California's richest valleys, especially those around the largest population centers. It is possible to drive by—literally—miles of small shacks where richest lands have been taken by thrifty Japanese who are the only ones who can farm with sufficient intensiveness to make the high rental required. The white American user of the soil desires equal opportunities with the white creator of personal property. He wishes to give to his children high school education, opportunities to learn music, the best literature and to have an American homelike home. If he cannot have these advantages he leaves the soil, and the Oriental who is willing to forego those advantages, to deny himself and to pay the high land tax is the one who occupies the land, and it is an axiom that the possessor of the land of today becomes the ruler of the country tomorrow.

We cannot see where higher citizenship will be exercised on next Tuesday than by voting "Yes" on "1—Alien Land Law" and "No" on "20—Land Values Taxation."

Remember, an X opposite "Yes" on the first and an X opposite "No" on the last of the initiative measures which appear on the ballot

LEARN AUTOS-TRACTORS in Los Angeles

One Tuition Price
Includes
All Courses

Increase Your Income From 50% to 100%

The right kind of training will develop an ability in you to increase your earning capacity. The tremendous demand for SKILLED Auto and Tractor Mechanics and Repairmen offers unlimited opportunity to every man with TRAINING.

Men of Any Age Can Earn Big Money

Age is no longer a barrier to high wages. Men of every age are now enrolled at the National Automotive School, learning the biggest paying trade. Assert your independence by taking the complete and practical course offered at the NATIONAL. Come to Los Angeles, where climatic conditions are most ideal, to LEARN in comfort.

Decide NOW to spend a few weeks at the Institution that guarantees successful training.

Pack Your Grip and Come to

NATIONAL AUTOMOTIVE SCHOOL

No Other
School Like
The
National

Fifteen years of accomplishment stands behind N. A. S. to guarantee you successful training. One tuition fee covers everything — instruction in every department—Auto Repairing, Machine Shop practice, Ignition and Battery Work, Vulcanizing, Tractioneering at our big 10-acre field, etc.—and your Scholarship lasts for life.

REPAIR WORK

Students learn every detail about auto construction and repair under direct supervision of Experts.

IGNITION AND BATTERY INSTRUCTION

Students taught how to repair, assemble and care for all kinds of electrical systems.

Hundreds Have Enrolled

From all parts of California and Oregon, Washington, Idaho, Utah, Arizona—in fact, from every part of the country, students have come to the National — realizing that here they can secure the complete courses of instruction they desire and need. Our list of letters from graduates which we send to everyone requesting our Catalog, gives the names of students who come from your locality.

A PERSONAL MESSAGE TO THE READERS OF CALIFORNIA CULTIVATOR

"Labor is relatively the highest priced necessity the employer must pay for—yet its cost is cheap if the employee be efficient. A Man's earning ability is not measured solely by hours, but rather by his skill, his training and the fundamental knowledge he commands. I believe that every reader of the California Cultivator will agree with me that sound, practical training of the farm boy and employee will do most in solving the labor problem. With the exorbitant cost of farm power machinery and the high price of labor, it behooves every farmer to see that those who operate his machines and power-driven implements are properly trained and can be relied upon."

J. A. ROSENKRANZ,
President.

SHOP PRACTICE

We teach operation of lathes, drills, planers, millers, etc. Reboring, re-bushing, etc.

VULCANIZING

Experts teach students latest methods of tire repairing and vulcanizing — A big-paying business.

THIS BOOK FREE

NATIONAL AUTOMOTIVE SCHOOL

TRACTIONEERING

Actual field practice on all standard makes of tractors. We teach how to hitch and adjust implements, tractor repairing, etc.

Oldest, Most Efficient Auto-Tractor School in U.S.

Established in 1905, today this school leads the country in modern equipment and methods of teaching. Over 9000 satisfied graduates guarantee your success here.

If desired, you can earn your room and board while learning. We help graduates secure good jobs. Many shops and employers look to our school as a source of supply for efficient mechanics, and willingly pay high prices to secure our graduates.

Life Scholarship

Your tuition fee pays for perpetual scholarship. You can return any time for additional training. We give diplomas to graduates, which certify their proficiency.

72-Page Book of Facts

We have just issued a profusely illustrated Book of Facts, which tells about all the opportunities for trained men in Southern California and gives detailed information about the six separate courses offered for one tuition fee at this school.

10 Minutes to "Grease-Up"

What does an hour saved each morning mean to you during the busy season?

Grease cups have been almost eliminated in the Best Tracklayer. Lubrication has been simplified by running wearing parts in baths of oil and by using anti-friction bearings. Truck rollers and drive sprockets are oiled by special pipes running direct from the black-oil tank. Instead of spending an hour each morning filling and turning down grease cups, you are off for the field in 10 minutes.

This feature of the Best Tracklayer is just one of the many developments resulting from long years of tractor-building experience. The Best is not a new tractor. Every piece of its mechanism has been an evolution. Design, choice of materials and workmanship of the Best Tracklayer have been time-tried, and this tractor is famous for its power, endurance, reliability and economy of operation.

Tracks are made of manganese steel. Powerful heavy-duty engine is simple in design, with all parts enclosed. 36 Timken and Hyatt bearings used throughout. Working parts entirely housed. Three-point suspension relieves engine, transmission and frame of injurious jolts and twists. Independently operated tracks enable tractor to turn in its own length. Non-friction, greaseless rocker joints for track links double life of track. No belts or chains. Every working part instantly accessible.

Write for our complete catalog. It tells an interesting tractor story.

Shipping Point Inspection Service

ARLOT shippers of fruits and vegetables in California have long felt the need of government inspection at shipping point, similar to that which is available to receivers at destination. The United States bureau of markets has repeatedly been asked to establish such a service in California. Owing to the fact that the funds available for inspection are restricted to terminal markets, it has been impossible for the bureau to establish such work even in a small way at California shipping points.

Several months ago G. H. Hecke, director of the state department of agriculture, recognizing the real need for such a service, took steps to establish a system which would give to the shippers of California products a dependable and thoroughly reliable inspection of their cars whenever they desired. Mr. Hecke's first move, which won the approval of all interests, was the appointment of F. W. Read, one of the bureau of markets most valued men, to take charge of the project. Mr. Read's last year with the federal government had been spent in California, where he had charge of the bureau of markets office in Los Angeles and became well and favorably known to the trade as a hustler and thoroughly experienced in the produce business.

Mr. Read had been familiar with the efforts of several other states to establish such a service and with the somewhat unsatisfactory results which were secured because of the inexperience of the inspectors. He resolved at the outset to profit by others' experience and to employ only men whose work had been in the produce business and who knew from practical training the problems confronting shippers.

Accordingly the trade was agreeably surprised to learn of the appointment of L. J. Weishaar to assist in the organization and administration work. Mr. Weishaar had ten years' experience with the large house on South Water Street in Chicago and for the past three years has been a food products inspector for the bureau of markets in Memphis, Kansas City and Chicago. Both Mr. Read and Mr. Weishaar continue on a working agreement with the bureau of markets.

H. H. Warner, who has been associated with several of the large shipping organizations in California for the past seven years, and who also was an employee of the bureau of markets for two years during the war, has been given supervision of the shipping point inspection in the southern part of the state. Mr. Warner originally opened and remained in charge for a year of the Los Angeles office of the bureau of markets and is well known, particularly in the south, where his work will be.

This service by duly authorized inspectors who are salaried state employees is available upon request on any one or any number of carloads of fruits or vegetables originating within the state. With each inspection the applicant is given a certificate which is practically the same in form as that used by the federal inspectors at terminal markets. The statements as to the quality and condition of the products inspected are acceptable as prima facie evidence in any court in the state and will, no doubt, carry more than ordinary weight in litigation even in other states.

In general the same methods of describing the products will be used by the inspectors in California as are in use by federal inspectors at destination, so that in case the same car were inspected both at loading and receiving points, a direct comparison could easily be made and the approximate extent of damage in transit determined. Special attention is paid to the manner of loading and to the condition of car equipment.

A fee of \$5 is charged for the inspection of straight cars and \$10 for cars containing more than five varieties or commodities. This charge is designed to meet the expenses of the work, so that eventually the service will be self supporting. Inspections will be made upon the request of shippers, buying broker, Eastern purchaser, railroads or any interested parties.

The inspection service has been in

effect in certain sections of the central and northern part of the state for about two months. Experienced men have been inspecting practically all the apples from the Sebastopol and Watsonville districts at the request of the shippers. Nearly all of the grapes from Lodi and a large number of cars moving from Fresno are also being inspected. The results so far on about 1,500 cars have proven the plan to be entirely practicable and the work satisfactory.

With the opening of the southern branch office in Room 217, Wholesale Terminal Building, the same impartial and thorough service is available to shippers of vegetables and fruits south of Tehachapi. The office expects to be kept busy through the fall and winter months on tomatoes, cauliflower, lettuce, celery, cabbage, etc. During the winter and spring it is planned to have inspectors available in the Imperial and Coachella Valleys. Several shippers of citrus fruits are also anxious to secure certificates of inspection, particularly on Tulare County Navels.

The extent to which the work will grow will depend upon the demand for the service. The project must be made self supporting and the force will be enlarged, and various deals covered just as rapidly as the number of requests for inspection warrant.

OLIVES AT A HUNDRED AND SIXTY

By F. A. Chatters

POOLING of this season's crop of unsold Mission and Manzanillo olives and placing them in the hands of a committee of local growers has been voted at a meeting of representative orchardists at Lindsay.

Growers representing the entire unsold acreage in Tulare County are being organized with the object of assigning their crops to a committee to fix a price and handle the sales.

Olives that cannot be disposed of at a fair price will be barreled in a salt solution, it is proposed, and held until the market improves, or sold next spring for oil. It is also proposed to send a salesman direct to the Eastern markets, especially New York and Chicago, to dispose of the local pool.

At a meeting last Wednesday W. B. Kiggins was elected permanent chairman and R. M. Carr permanent secretary of a Tulare County olive growers association. The committee chosen to handle the pooling of this season's crop is composed of C. W. Braswell, Lindsay; B. J. Morey, Porterville and Strathmore; T. F. Bovee, Exeter; L. J. Williams, Orosi, and A. E. Imbler, Delano.

It was pointed out at the meeting that with most of this year's crop in Tulare County, the growers should hold out for a fair price. Sales as high as \$160 have been made in the Lindsay district. It was also suggested that if a surplus develops the fruit be canned and sent to the East free as samples to augment the advertising campaign now under way.

Latest accurate figure on the California olive crop this year is 9,000 tons, as compared with 13,000 tons in 1918 and 14,000 tons in 1919. The Tulare County district is practically the only district in the state approaching anything like a normal crop and it is here that buyers must come for this year's business.

BENEFICIAL INSECTS RECEIVED FROM CAPE TOWN

The first installment of beneficial parasite material from E. W. Rust, field entomologist, Cape Town, South Africa, has been received by Entomologist Harry S. Smith at the California insectary. The material, consisting largely of parasites of the black scale (*Saissetia oleae*), so destructive to citrus trees, will be reared at the Sacramento insectary for future distribution in the citrus groves of California. Mr. Rust, a field entomologist and explorer of the California department of agriculture, has received valuable assistance from the authorities at Cape Town, and the progress of his investigations points to the ultimate success of the California department's work in controlling the black scale in this state.

GYPSY MOTH

The most serious problem which has ever confronted Eastern horticulturists has been brought about by the introduction of gypsy moth. It swept through the orchards and forests of a great portion of New England. Millions have been spent in the effort to control it and one or two sections where the infestation was very limited have claimed complete eradication. However, now and then a new outbreak occurs and warning has been sent to horticultural inspectors the United States over by the department of agriculture.

"Early in July a very serious infestation of gypsy moth was found on the Duke Estate at Somerville, New Jersey. For several years prior to this time this insect has not been found outside of New England, except a few colonies that have been exterminated. Enough work has been done in this infestation and the surrounding territory to determine that approximately 100 square miles is infested. This area may be increased after thorough scouting is done during the winter, when the foliage has fallen from the trees. It seems probable that the original infestation was brought to the Duke estate on a shipment of foreign stock, probably on blue spruce, which was imported in 1909.

"The situation is complicated and made far more dangerous owing to the fact that since 1913 many shipments of trees have been sent out from this state. Some have gone to private parties for planting, but a considerable number have been sold to nursery firms and landscape architects and rehandled. An effort is being made to trace all of these shipments, but it is practically impossible to determine the ultimate destination of some of the trees handled by nursery firms. Infestations are found in nurseries in New Jersey and New York that received stock from this source. An attempt is being made to stamp out these infestations and special inspections of all stock going from these nurseries are being made by this bureau in cooperation with the states concerned. As soon as the deciduous foliage is down this fall, intensive scouting will be taken up to determine the extent of the infestation. After this information is at hand doubtless these areas will be covered by federal quarantine.

"It may not be out of place to state that the funds of the bureau of entomology that are at present available for gypsy moth field work are very limited, owing to severe reduction in the appropriation and increased cost of operation, and that unless emergency funds are made available by congress and the states concerned it will be impossible to handle the situation effectively.

VELVET BEANS

By Roy R. Mathews

Having read much about the soil building qualities of these beans and the wonderful growth of vine, I planted four rows between each pair of six year old orange tree rows, May 15, thinking I would have quite a carpet of green to keep the ground shaded and cool during the excessive June heat spells.

These were planted (in Buena Park section of Orange County) where others were planting Limas and Blackeyes, but did not come up for nearly ten days, the weather turning cool after a three-fourths inch rain May 21. I secured less than half a stand and what did come up stood still until our hot growing weather came in July, when they made a very satisfactory growth and continued growing rapidly until about the middle of August, when our nights turned cool and foggy. Now they are a mass of vines 30 to 36 inches high on light sandy loam and 18 inches high on the lightest of sand.

I raised Blackeyes on this same soil in 1915, '16, '17 and '18, but in 1919 the orchard was cultivated clean. In

the winter of 1917, '18 and '19 I had a winter cover crop of bur clover and Melilotus Indica. In 1917 the orange trees received about four cubic feet of poultry manure and in 1919 about five cubic feet of dairy manure. I now have an excellent set of fruit; trees all are a rich dark green and am propping some trees now.

I planted 58 pounds of Spotted Velvet bean seed in 60 rows 630 feet long. The foliage is heavier than Blackeyes or Limas on same soil. Better stand would be secured by waiting until July 1 to plant, as I am satisfied these beans require warm nights as well as warm days to secure a normal germination and growth. My water bills are about 50 per cent more on account of raising this cover crop over clean cultivation of citrus trees. They have a heavy root system but do not have the number of nodules that Blackeye beans do on the same soil. They are a failure for a green June mulch here.

THE APPLE LAW WITH REFERENCE TO LADY APPLES

"The California apple standardization law states that California Fancy Lady and Winesap apples shall be not less than two inches when measured through the widest portion of cross section," says F. W. Read, in charge of the standardization service. In many ways this section of the law

is impracticable. Lady and Winesap apples are two widely different varieties and it is not wholly proper to group them together. Moreover, up to a certain point, the smaller the Lady apple the better the trade likes it, as they are used largely for ornamental purposes.

We can see no particular reason for insisting that in order to be classified as "California Fancy" a Lady apple must be not less than two inches in diameter. This variety is usually packed "face and fill," or "jumbled," and there will be no objection on the part of this office if Lady apples are shipped in this manner if the containers are so marked.

If the containers are marked "California Fancy," "B," or "C" grade, they should meet all the requirements of the respective grades, with the exception of size.

AN UNDETERMINED VINEYARD PEST

R. L. Nougaret, in charge of the viticulture service of the California department of agriculture, writes that insect pests and plant diseases of the vine will be fully discussed at the coming fifty-third convention of fruit growers and farmers, to be held at Fresno in November.

Especial attention will be given to the matter of an undetermined disease that has been more prevalent this year

in vineyards in the state than ever before. At this time no information is available as to its origin, cause or prevention, but from the data collected this year it is evident that systematic and concerted measures must be adopted at once which will make possible the repression of this new vineyard pest.

THE TANGELO

The tangelo is only now coming into popular favor, yet it is not new to citrus sections. In its issue of July 7, 1905, the Cultivator published the following note:

"Another group of desirable fruits has been secured by the crossing of the Dancy tangerine with the pomelo, which gives a fruit neither pomelo nor tangerine, not so sour nor so bitter as the pomelo, yet with more tartness and more appetizing as a breakfast fruit than the tangerine. It is eaten from the hand, more as a tangerine is, by separating sections and dipping in sugar, rather than by scooping out the pulp, as is ordinarily done in eating the pomelo. It is thought that this fruit will be a favorite with those who have found the pomelo too bitter or too sour for their taste."

For growers who need greater capacity and pressure, there is the famous Hardie Triplex Sprayer and other models.

The Hardie all-brass bucket pump, the only bucket pump on the market with mechanical agitator, 200 pounds pressure with 35 strokes per minute.

Hardie barrel sprayer—mounted on the side for low height and freedom from upsetting. Pumps out all the liquid. Equipped with agitator.

The Hardie Junior Power Sprayer

Hardie Spraying Equipment for the Small Grower

There is a Hardie Sprayer for every spraying need.

The Hardie Junior is the very best power sprayer for the small grower. Its price is low, its quality is high. It is guaranteed to supply two lines of hose and maintain a pressure of 200 pounds. The tank has a capacity of 150 gallons. For growers whose spraying is unusually light, there are Hardie bucket and barrel pumps of just the size you need. Mechanical agitators are a part of every Hardie outfit.

Hardie hand sprayers are the easiest to operate and the lightest two features of unquestionable value.

We gladly offer you our twenty years experience in helping you select the right sprayer—we carry a complete line of sprayers and sprayer accessories.

[POLITICAL ADVERTISEMENT]

His fight is Your fight

Senator Phelan has no need for idle promises or platform patter. His fighting record for California's rights speaks for itself.

Keep California White

You "scratch" the SOIL to grow good crops!

Make your BALLOT count for California.

Powerful interests threaten the agricultural associations of California. Your fight against this persecution demands the return to Congress of Senator Phelan. His voice and vote have consistently challenged all such attacks.

Senator Phelan advocates a protective tariff on California rice and beans. He voted for an increased tariff on lemons. He fought an increase of freight rates on cantaloupes and vegetables. To save the California fruit crop in 1919, he secured priority orders for tin plate shipments to California canneries in the face of country-wide competition. California cotton was saved by his action in securing an appropriation to fight the boll weevil in Imperial Valley. He secured for California a big share in the benefits of the Farm Loan Law.

Always a progressive in thought and action, Senator Phelan, himself a member of the Rice Growers' Association and the California Prune and Apricot Growers, Inc., has worked and voted for farmers cooperative associations. He fought for the California Associated Raisin Company. Its president, Wylie M. Giffen, commended him thus: "The raisin growers of California are immensely pleased with your action."

Above all, Senator Phelan knows how best to meet the menace of the "silent invasion." His fight to save California from the Jap is your fight.

Re-elect
JAMES D.
PHELAN
U.S. Senator

CAPITALIZATION OF PRODUCERS

(Continued from Cover Page.)

in favor of the frills and non-essentials. We cannot build a sound national economic structure unless the foundation is properly laid."

After discussing three fundamentals of successful agriculture, efficient transportation, finance and labor, the statement concludes.

"As cities increase in population, the farmer assumes greater relative importance. Food will be the biggest factor in world economics for many years to come. We cannot rehabilitate the devastated fields of Europe in two nor in five years. Even so energetic a people as we Americans could not get the Southern states back to normal production until ten years following the Civil War.

"We are facing the dawn of a new era in agriculture—farming has evolved into a profession requiring the best of brains and skill. The farmer will no longer be looked upon in a different light from the city man. The barriers between city and farm life will be wiped out—the doors will be swung wide open. The future security of American agriculture lies in the direction of making farm life more attractive from the social standpoint, and while the development of a more satisfying rural society must depend largely on the activity of the country people themselves, nevertheless the cities may render a distinct service in the work of improving the social conditions of the country.

"In order for the interests of the farmer to be properly and permanently protected, a common understand-

ing must be secured between agriculture and other interests of the nation."

THE CITRUS BLACK FLY

Edwin T. Meredith, secretary of agriculture, has called a public hearing to consider the advisability of quarantining Cuba, the Bahamas, Jamaica, Canal Zone, Costa Rica, India, Philippine Islands, Ceylon and Java on account of the citrus black fly, an insect pest which attacks many plants in the regions named, and which is not known to occur in the United States. There is danger of bringing this insect into this country in connection with shipments of fruits and vegetables in the raw or unmanufactured state, of plants or portions of plants used as packing material or otherwise, and in litter and rubbish in railway cars from Cuba, as well as in or on the cars themselves. The hearing will be held in Washington, December 20, 1920. All persons interested in the proposed quarantine may attend and be heard either in person or by attorney.

The restrictions which may be placed on the movement of the products named on account of the citrus black fly will not necessarily be an embargo, as provision will probably be made for the entry of fruits and vegetables at certain designated ports after inspection and, if necessary, cleaning or disinfection under the supervision of an inspector of the department. Disinfection may also be required of all railway cars and other vehicles from Cuba, as well as the thorough cleaning of railway cars of all litter and rubbish before embarkation.

SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards 6 times they will not be affected by MILD-DEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand and Fleur de Soufre, packed in double sacks, are the fluffiest

and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

VENTILATED Sublimed Sulphur—Impalpable Powder, 100% pure, in double sacks, for Dry Dusting and making Paste Sulphurs.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men \$5 per day for making the solution and applying same.

To create additional available plant food and prevent smut in grain, drill into the soil 110 pounds per acre of TORO BRAND SPECIALLY PREPARED AGRICULTURAL SULPHUR—or our DIAMOND "S" BRAND REFINED POWDERED SULPHUR. This soil treatment has increased various crops up to 500%. Send for Circulars No. 6, 7 and 8.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur, Mixtures, etc.

Carried in stock and mixed to order.

SAN FRANCISCO SULPHUR CO.
624 California Street, San Francisco, Cal.

We are equipped to make immediate shipments. Send for Price-List and Samples.

Ask us for prices for Carbon Bisulphide, the surest remedy for destroying ground squirrels.

GRAPE MEALYBUG TO BE DISCUSSED

County Horticultural Commissioner Rutherford has advised Director Hecke that on November 6 a meeting of Stanislaus grape growers will be held at Modesto to consider ways and means of combating the grape mealybug, which has appeared in certain localities in his county.

Especial attention also will be given to the matter of an undetermined disease that has been more prevalent this year in vineyards in the state than ever before. At this time no information is available as to its origin, cause or prevention, but from the data collected this year it is evident that systematic and concerted measures must be adopted at once, which will make possible the repression of this new vineyard pest.

R. L. Nougaret, in charge of the viticulture service, will represent the state department of agriculture at this meeting, and the results of this conference should be of great interest and value to grape growers all over the state.

FERTILIZER CONFERENCE

A conference of the licensed fertilizer manufacturers and dealers of California was held in the office of the director of agriculture at Sacramento on October 11. The conference was called for a discussion of matters of general interest to the fertilizer industry and an exchange of ideas on how the state fertilizer law may most effectively serve the interests of both seller and buyer.

SACRAMENTO VALLEY PEAR CROP

"The cleanest, most wonderful crop in the history of pear growing," says T. D. Urbahns, field entomologist of the California department of agriculture, surveying the 1920 pear season. Entomologist Urbahns estimates that by timely well ordered spraying individual orchards can produce a crop 95 per cent free of codling moth.

ARSENATE OF LEAD PATENTS

The California Spray Chemical Company writes regarding the ending of a lawsuit begun many years ago against an Eastern spray company. To protect the validity of patents on arsenate of lead Messrs. E. E. Luther and W. H. Volck have persisted in maintaining their fight. The hearing took place last June before the circuit court of appeals and the final decision was only handed down a few days ago sustaining the validity of the patents of the California Spray Chemical Company.

FAGEOL
WALKING
TRACTOR

Four years of successful operation has proven conclusively the exceptional qualities of this tractor; its dependability in every class of farm work under all conditions of soil is most unusual.

Because of its superiority, demand is far in excess of factory capacity, notwithstanding frequent enlargements.

ALFALFA SEED

A Letter to California Farmers and Seedsmen

During the past sixty days we have selected for our trade approximately 1,000 bags of the finest and purest alfalfa seed grown in the Yuma Valley, and until further notice will fill all orders at the following prices:

Hairy Peruvian 35c. Smooth Peruvian 29c.

American (Common) 24c.

DELIVERED BY EXPRESS. WE PAY THE CHARGES

The Hairy Peruvian and Smooth Peruvian comprising our stock come from fields with absolutely PERFECT PEDIGREES. Every bag is CERTIFIED, LABELED AND SEALED under direction of the State Agricultural Department. All three varieties show a fine, golden color, and were carefully selected for high purity and germination.

For 11 years our seed has won first prize at the Arizona State Fair in competition with other growers and dealers of the State.

At the Fourteenth International Soil-Products Exposition held in Kansas City last year, in competition with the entire United States, our seed won BOTH FIRST AND SECOND PRIZES.

We are proud of this record. We have a reputation to maintain. We guarantee every bag of seed we sell to be exactly as represented.

Place your orders now and take advantage of the low prices ruling at the beginning of the season.

We also build deep well turbines, deep well plungers, horizontal and vertical pumps for mining, irrigation, drainage.

Farm Profits Survey

FIGURES on farm profits, covering seven years in two areas and five years in a third, have been made public by the United States department of agriculture. These figures show that comparatively few of the farmers in the groups studied have been making large profits during the recent years of comparatively high prices; that their average return on investments increased from about four per cent in 1918 to seven per cent in 1918; that most of them are making less than \$500 cash per year over and above the things the farm furnishes toward the family living, which, however, constitute a very important factor.

Representatives of the department visited these farms year after year, taking records covering the farm business under the following heads: Distribution of farm area; crop yields; amount of work stock and of other livestock; amount of labor used; amount and distribution of farm capital; amount and distribution of receipts and expenses; value of the family living obtained from the farm; amounts of the more important products sold, and prices received. From the figures thus obtained the farm income (receipts less expenses), and the labor income (farm income less five per cent on investment) have been computed for each farm and for each group of farms.

The average farm income of the 25 farmers visited in Washington County, Ohio, for the seven years 1912-18, was \$610; the labor income, \$276; the return on investment, 4.6 per cent. In addition to the farm income the farmers had food, fuel and house rent, estimated to be worth, on the average, \$359 per year. For 1912 the farm income of these farms averaged \$456, and for 1918 the average was \$719. These farms are in a hilly section, where the soil is not especially fertile.

The 100 farmers in Clinton County, Indiana, being on better land than the Ohio farmers, made a correspondingly better showing. Their farm incomes averaged \$1,856 for the seven years, 1910 and 1913-18, and their labor incomes, \$558. Return on capital was 5.7, and food, fuel and house rent furnished by the farm, \$425. The average farm income of these farms increased from \$1,282 in 1910 to \$2,978 in 1918.

The farm income of the 60 Wisconsin farms averaged \$1,293 for the five years, 1913-18, the labor income \$408, and return on investment—determined by deducting from the farm income the value of the farmer's labor—4.7 per cent. The average farm income ranged from \$1,079 in 1913 to \$1,990 in 1918. On most of these farms the principal source of income is dairying.

Of the 185 farmers in the three areas, none made a labor income of \$1,000 for every year of the study, but 18 in the Indiana area and seven in the Wisconsin area made labor incomes averaging over \$1,000 per year for the period. Four farmers (two per cent of the entire number) made over \$500 labor income every year. Averaging labor income and loss over the whole time, 15 per cent of the farmers failed to make any labor income at all. Ten per cent failed even to make five per cent interest on investment in any year of the study.

Department specialists point out that though farm incomes in most cases showed a marked increase during the years 1916-18, as compared with incomes for 1912-15, these increases are more apparent than real, in view of the decrease in the purchasing power of the dollar. The turnover for the recent years was larger than for the earlier years, but the returns were relatively little larger, if measured in terms of the things it would buy rather than in terms of dollars and cents.

Farmers Marketing Committee

THE Committee of Seventeen, hereafter to be known as the Farmers Marketing Committee of Seventeen, appointed by recent conference of the National Board of Farm Organizations, held its first meeting Monday and Tuesday, October 4 and 5, at Chicago and effected a permanent organization.

All members were present with the exception of Henry J. Waters. Dr. Livingston, director of markets for South Dakota, was appointed to fill the vacancy. C. H. Gustafson of Lincoln, Nebraska, was named chairman. Wm. G. Eckhardt of Chicago was elected treasurer and O. M. Kile of Washington, D. C., and C. E. Gunnels of Chicago, secretary and assistant secretary.

The outstanding feature of the meeting was the unanimity with which all agreed that each must sink his own individual, pet ideas as to what marketing plan is to be adopted, and search for the basic facts upon which a sound and comprehensive cooperative marketing system may be built. All appreciated that the committee has a tremendous job on hand, the biggest job any farmers committee ever before confronted, yet the feeling was unanimous that a safe, sane, sound and satisfactory solution would be found and put into operation.

It was decided to break up the work of the committee into subdivisions. The following working plan with subcommittees to handle each division was adopted:

Cooperative marketing methods: Historical; consideration of proposed plans.

Cost of marketing: Distribution, country elevator terminal and export; functions and efficiency of grain exchanges; relations of future trading to marketing; market quotations and crop reports, foreign and domestic; present marketing practices, mixing, blending, etc.

Storage and transportation: Data on available storage capacity, ownership, location; efficiency of storage; insurance; relationship of transporta-

tion companies to grain; marketing companies.

Consumption and export: Consumption on farm; manufacturing, local and centralized, flour, other grain products; disposition of by-products; methods of distribution; exports and foreign competition.

Finance: Relation to marketing and distribution.

In addition the work of the first subdivision is to be divided up among four smaller groups, each group to study and report at the next meeting the cooperative methods followed in special sections of the United States or in connection with particular commodities. These groups are:

Group 1: California Fruit Growers Exchange; Prune and Apricot Growers of San Jose; Pacific Northwest Grain Pooling Plan. Committee, Eckhardt, Taber, Bingham, Gregory.

Group 2: Equity Cooperative Exchange; Wisconsin Cheese Producers Association; state ownership plan; Michigan State Farm Bureau Elevator Exchange. Committee: Middleton, Meisch, Thorne, Hirth.

Group 3: Farmers Union of Nebraska; Missouri Farmers Clubs, National Wheat Growers Association; American Cotton Growers Association; Kansas Farmers Union Plan. Committees: Hyde, Boles, Donnell, Snyder.

Group 4: National Farmers Grain Dealers Association; Canadian Grain Growers, Ltd.; Cooperation Abroad. Committee: Gustafson, Anderson, Ladd, Livingston.

The committee decided to hold a second meeting in Chicago, November 4-6, at which time men of national reputation and prominent in marketing affairs will be brought before the committee to discuss both general and specific features of the entire marketing problem and to answer such questions as the committee may ask.

Among those to be invited are Secretary of Agriculture Meredith, Victor Murdock, Julius Barnes, Herbert Hoover, Barney M. Barnah, L. F. Gates, Harold G. Powell, members of the farm bureau committee who visited the California cooperators, National

Millers Federation, representatives of the Canadian Council of Agriculture.

It was decided to employ competent economists to investigate and report on certain features of the marketing problem. Much data must be collected in addition to reports to be made on the methods and plans of the different cooperative marketing organizations to be investigated. Progress reports are to be made at the November meeting.

SUGAR BEET TOPPER AND HARVESTER

We heard a sugar beet grower express himself the other day in effect that it would not be many years before the sugar production of the world would be left to the tropics. The cost of labor and of land is so great and the treatment accorded by the sugar factories, in holding all the profits in good years and in holding down prices to growers in all years, is such that ultimately growing of beets for sugar production must cease. The labor of thinning, weeding, topping and harvesting is so great that every effort is made through labor saving machinery to still be able to produce a crop.

Thinning and weeding can hardly be accomplished without much hand labor, but we recently saw a tiny model of a beet harvester and topper which may become a factor in reducing costs and in enabling further production. It is a combination beet plow or lifter, topper and harvester. It consists of a large revolving wheel or mechanism which grasps the beet after the plow has passed under it and loosened it. It carries the beet up to the topper, where the top is removed and the beet deposited on one dump while the top is put on the other. These dumps may be operated from the seat of the driver and can be so constructed as to carry quite a material portion of a trailer load. When the topped beets are dumped they are left in the piles over the field until the truck or trailer calls and carries them away.

The test of this little model was made with small radishes and with them the operation seemed to be nearly perfect, still, we could not help but question as to the possibility of practical operation of the full sized working model because of the vast number of parts necessary in such a complicated machine. It seems to us that it would be necessary for the beets to be grown of a fairly even size and height or some would be topped too low while others might fail to have sufficient of the top removed. The invention is the work of George E. Faucher, who has shown wonderful ingenuity in arranging the parts so as to be under the control of the driver. If successful, it will be a wonderful labor saver.

PRODUCTION OF CORN OIL ASSURED

Corn oil appears to have established itself as a satisfactory product for which there will be a steady demand, according to department Bulletin 904, recently issued by the United States department of agriculture. That the oil can always be produced seems assured by the fact that it is a by-product of the manufacture of certain staple corn products, and it is only in case of an overproduction of fats and oils that it might be discontinued and the germs disposed of as feed. Such a situation seems improbable, however, and at the most would doubtless be only temporary.

As to the utilization of corn oil, it is believed that within a few years the oil will be used almost entirely for edible purposes, except only what is of such poor quality as to make its refining unprofitable. The sale of the oil in retail packages will very likely be further developed, and its use by bakers is also likely to increase.

The amount of corn oil used for edible purposes in the future will be determined by the quantity available rather than by any question as to its utility. At present some bakers, while admitting that it is suitable for their products, use cottonseed oil because the supply of corn oil fluctuates so that it is not always obtainable in sufficient quantities.

Returns from the recent Tulare County fair show a net profit of more than \$2,000, an unusual record for a county fair.

TRACTOR SHORT COURSE

Do you wish to learn more about the repair and operation of tractors?

A gas tractor short course will be offered at the Lodi Union High School from November 15 to 20. This course will be under the direction of the agricultural engineering division of the college of agriculture, University of California. Five instructors from the university farm at Davis, with representatives from the various tractor companies, will conduct the course.

The work given will be the same as the tractor courses offered at Davis and Riverside for the past four years. The course will include a large amount of practice work, such as ignition trouble finding, magneto timing, carburetor adjustment, bearing scraping, valve grinding, etc. There will be 11 hours of general lecture demonstrations, 18 hours of repair work, 12 hours spent on the various tractors, and during the evenings there will be tractor motion pictures and lectures on general agricultural subjects.

The enrollment for this course is limited to 100 students who must be over 18 years of age and owners, operators, or others directly interested in tractors. The enrollment fee is \$3.

Write to H. W. Shepherd, Lodi Union High School, for further information.

GETTING RID OF THE ARGENTINE ANT

From Texas to the Atlantic, in scattered localities, the Argentine ant, in dark brown hordes, attacks gardens, ruins orchard and truck crops, and even swarms into the houses, making conditions in some cases so unbearable that their inhabitants leave.

The pest is carried by rail in food-stuffs, and since its original introduction, presumably from Brazil, it has been distributed about the country until infestations occur throughout the South, with a separate group of infestations in California. It may also be carried by floods such as occur in the Mississippi Valley, the ants forming themselves into a compact ball that floats to safety.

The nurseryman, the trucker and the orange grower are greatly molested by this pest, owing to the fondness of the ant for the honeydew excreted by aphids and scale insects. The worker ants take the best possible care of these honeydew yielding species, and protect them from their natural enemies. They frequently build shelters over them, and as the host plants grow, carry the young scales and aphids and place them on the young tender growth, where they may more easily sap the juices of the plants.

In corn, cotton and sugar cane fields the Argentine ant when present is con-

stantly attending the aphids and mealybugs, increasing the number of these species to an alarming degree, much to the detriment of plants.

Farmers Bulletin No. 1101, The Argentine Ant as a Household Pest, issued by the United States department of agriculture, gives methods of control which entomologists in the department have found effective. For keeping ants from the trees the following remedy is suggested:

Mix together thoroughly with a wooden paddle the following ingredients until of a uniform color and consistency:

Finely powdered flowers of sulphur, 1 part by weight; commercial tree-banding sticky mixture, 6 parts by weight.

The tree trunk should first be coated with melted paraffin, which will harden almost immediately. The mixture just referred to should be applied then over the paraffin in a band about five inches wide and about one-quarter inch thick.

Before the band is applied the tree should be pruned, so that the lowest branch is fully a foot above the ground and all rubbish should be removed from beneath the tree and the soil cultivated to destroy all grass and weeds.

Agricultural students at the university are to feature a fruit exhibit in the third week of November.

REO

This Reo Speed Wagon Belongs to—Our Day

(Trade Mark)

You can remember, doubtless, when the women hoed the corn and sages argued that the new fangled, one-horse, wheeled cultivator would never do the work. "Corn must be hilled up," they said.

Well, that idea was no more fallacious than the idea some farmers still hold that all farm hauling can still be done by horses.

This Reo Speed Wagon is as much faster, as much more efficient—and as much more economical—than horse hauling, as is the present riding cultivator over a bent-backed human with a hoe!

Horses are too slow and therefore too expensive in these days of high costs and scarcity of farm help.

Times have changed—time is money now on the farm as well as in the city.

Slow, time-wasting methods won't do any more.

You know you simply couldn't do without your automobile today—that car you considered a luxury when you bought it.

You can't bear to sit behind that slow old horse all the way to town and back.

Nor can you get the most out of your land—the "top o' the market" for your produce, or the best in the market for your own table—if you continue to depend on horses for road work.

Remember, too, that most of your hauling is not from, but to, the farm—smaller loads of course but more of them.

One day in the field is worth two on the road. Keep the farm work going—then you'll have more work for your Reo Speed Wagon delivering what the farm produces.

Three Standard Automatic Subsoiler

(Catalog No. 37)

KILLEFER
EFFICIENCY

To Get the Full Benefit From the Winter Rain You Should Subsoil and Chisel Now While the Ground Is Hard

Increased land values and increased agricultural education have combined to prove the necessity of deep tillage. Increase in land values has made it essential to secure maximum returns from each acre; increase in agricultural education has shown the advisability of deep subsoiling and chiseling for bigger and better crops. You can break the hard pan or plow

sole with a subsoiler where a plow will not enter, destroying this hard stratum without turning it over, permitting the moisture and plant roots to penetrate deep and providing ideal conditions for moisture preservation and plant germination. We make automatic subsoilers with one, three and five standards, suitable for all size tractors from 8 to 75 horse power.

Write for catalog and prices, also our booklet on Deep Tillage

The Killefer Manufacturing Co.

New Avery One-Ton
Motor Truck

Now You Can Avery-ize Your Hauling Too

Here is the latest addition to the Avery Line of Motor Farming Machinery—the new Avery one-ton motor truck. And, as you might expect, it is a real Avery quality outfit from radiator to tail light. It has the Avery Six-cylinder motor—the same motor that has proven so successful in the Avery Six-Cylinder Tractors and Motor Cultivators. This means plenty of power. It is equipped with Internal Gear-Driven Axles, Vanadium Steel Springs, Stromberg Carburetor, Westinghouse Electric Lights and Starter, Willard Truck Battery, Alemite Lubricating System, Goodyear Demountable Rims, Pneumatic Cord Tires

all around and other equipment which means dependable and economical service.

Every farmer needs a motor truck. It is one of the biggest time and work savers he can own. Here is a truck built especially for his needs by a company whose motor farming machines are now giving satisfactory service in every state in the Union and 68 foreign countries.

Write for special circular. Also ask for the Avery catalog showing the complete line of Avery Tractors and line of Avery Tractor-Drawn and Tractor-Driven Machinery.

Legal Queries

Louis B. Stanton, attorney 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Net Time for Labor

I engaged a party for day labor at \$4.50 a day of eight hours each. During a portion of the time they resided upon the place and gave full time. For two months after that they resided on their own place and consumed an hour and one-half to two hours in travel of my eight hours. Can they collect such wages?—Subscriber, Scotia.

If contract was for \$4.50 per day of eight hours work, they are required to perform their full contract, and if they do not furnish their full eight hours they are not entitled to collect therefor.

Joint Checking Account

Husband and wife put money in the bank on a joint checking account. A year later the husband desires to discontinue the wife's account, and tells the bank he wants account changed to his own name.—Subscriber, Van Nuys.

As the husband and wife both put money in a joint account, this account could only be changed by their joint consent. There is, of course, nothing to prevent the husband's starting a new account in his own name.

Claiming Heirship

My great grandmother died, leaving a farm in New York, which her husband, together with all children except my grandmother, sold. I am the only heir of my grandmother remaining. Would this convey clear title and within what time may a person make a claim for such heirship of property?—Subscriber, Azusa.

A case such as the foregoing, in order to give a definite opinion, would require more investigation than the facts stated in the question would show. It is probably the case, however, that the interest of the subscriber's parent has never been quieted and the subscriber retains that interest in the real property, but in order to give an opinion it would be necessary to know whence the great grandmother acquired the property, when she died, the age of the children, and several other matters.

Fencing Against Stock

I have a homestead joined on three sides by government land and on the fourth side by a neighbor whose animals trespass. If I enclose between myself and the government land, can I take up stock, or will it be necessary for me to fence one-half between his and my land?—Subscriber, Redwood Valley.

The statute with respect to estrays provides that such animals shall not trespass upon the land which is planted to growing crops, vines, fruit trees, or vegetables and is at the time entirely enclosed by a substantial fence or other enclosure. Two requirements are, therefore, necessary to entitle one to invoke this statute; that is, that the land must be planted to growing crops and entirely enclosed.

(We believe, however, that the state supreme court has recently rendered decision in effect that injury caused by trespassing stock makes the owner of the stock liable, regardless of whether the injured crop is surrounded by "substantial fence." In any case, neither stockman nor crop producer is certain of his ground now and it is probable the next legislature will be appealed to for a law which will be fair to all and which will end the uncertainty.—Ed.)

Community Property

A couple are about to separate. They have community property consisting of a ranch and products. They also have two minor children. The husband threatens to dispose of the property. What steps can the wife take to keep him from decedding or giving away?—Subscriber, Visalia.

Although the husband has the management and control of the community property, the wife must join with him in executing any instrument by which such community property or any interest therein is leased for a longer period than one year, or is sold, conveyed, or incumbered, provided, however, that where the real property stands in the name of the husband alone, his conveyance thereof to party who takes in good faith without knowledge of the marriage relation shall be presumed valid. An action to avoid such conveyance by the husband must be commenced within one year from the filing of record of the instrument in the recorder's office. You might further protect your interests by filing a declaration of homestead upon the property, but you had better go to an attorney in your vicinity and lay the case before him and take such action as he may advise.

No Will

In case of death of a married man with no children, leaving no will, what disposition is made of his property by law?—Subscriber, Calipatria.

If the decedent leaves no issue, the estate goes one-half to the surviving husband or wife and the other one-half to the decedent's father and mother in equal shares, and if either is dead, the whole of said one-half goes to the other, and if there is no father and mother, then the other one-half goes to the brothers and sisters of the decedent and to the children and grandchildren of any deceased brother or sister by right of representation. This applies to the separate property of the husband. As to the community property, one-half goes to the wife and the other one-half is subject to distribution as above provided for the separate property.

Dog Poisoner

I have had several dogs poisoned in the past ten years. I have now evidence to convict the poisoner. What is the law in such case?—Subscriber.

Section 596 of the Penal Code provides that every person who willfully administers poisons to any animal, the property of another, or maliciously exposes any poison substance with the intent that the same shall be taken or swallowed by any such animal, is punishable by imprisonment in the state prison not exceeding three years or in the county jail not exceeding one year, and with fine not exceeding \$500. It is to be noted that this section is indexed under the heading of poisoned cattle, however, but the language is general enough to cover all animals.

War Tax

I purchased a team for \$100. When I made payment the vendor charged 45 cents war tax. Had he any right to do so?—Subscriber, El Cajon.

No provision for such an amount or character of war tax can be found.

Crop on Leased Land

I have lease on land which terminates December 31. The cotton crop will not be harvested until February 1. Do I have to give up the land on December 31 and the balance of the crop, or do I have a right to stay until the crop is harvested?—Subscriber, Mecca.

Under ordinary provisions, if the land was leased for a definite term the landlord has no concern as to the planting or time of harvesting, but the tenant must so conduct his operations as to be able to turn over the land to the landlord at the expiration of the lease, and if he has so planted that a crop is left thereon, he could not trespass upon the land in order to harvest it. Upon a full statement of the facts and circumstances it might be that some relief might be given. You should take the matter up with some attorney in your locality.

Overhanging Branches

Walnut trees planted on adjoining ranch overhang boundary line about two feet, although the trees are planted 20 feet from line. What are the rights in respect to the overhanging branches with nuts thereon?—Subscriber, Fullerton.

The decisions of the courts have

been directly conflicting upon the rights of the parties in such cases. The supreme court of California has intimated that fruit on overhanging branches belongs to owner over whose land they hang, and such party can cut such branches, trim them, and is entitled to all nuts or fruit growing upon such branches. The adjoining owner undoubtedly would not be entitled to shake the trees so that nuts which do not overhang his land would fall thereon, but if the owner upon whose land the trees are planted shakes the trees and the nuts fall on his neighbor's land, the owner of the trees certainly could not trespass upon his neighbor's land in order to gather nuts which had fallen there, but such nuts could be gathered by the party upon whose land they fall. The owner of the trees could not probably be required to trim back the overhanging limbs where they only overhang a couple of feet or so, as that would cause so little injury that the law would not take notice of it and would remit the party over whose land such limbs overhung to his right to trim the branches even within the dividing line himself and recompense himself by the wood from such branches. A tenant of land would undoubtedly have all the rights and be subject to all the liabilities of the owner under the above question.

Cutting Eucalyptus Roots

Can one cut the roots of gum trees near his line by running a ditch two feet from that line, or can he compel a neighbor to cut the trees down?—Subscriber, Fullerton.

A remedy by abatement of the roots is unquestioned and a ditch may be run along the boundary line so as to cut off the roots. The courts have decided in directly conflicting decisions as to the right of injunction to compel the removal of roots projecting into adjoining land, but this will be passed upon by the appellate court at an early date and then definitely established in this state.

To Avoid Probate

In what way can property be deeded to a person during the life of the owner to take effect at his death, so as to avoid administration?—Subscriber, Holtville.

Probably the best method would be to deed the property to the person to whom it is desired to go, reserving life estate therein to the grantor. In such event the only procedure necessary would be to establish of record the fact of death.

Joint Tenants

A conveyance is made to A and B as joint tenants and not tenants in common. Does this make the title to real property absolute in the survivor?—Subscriber, Holtville.

The usual wording of conveyance is "A and B as joint tenants with right of survivorship." In case of the death of one the whole property vests in the survivor. It is necessary only to take a proceeding to establish of record the fact of the death of the party deceased.

STALDER SALE A BIG ONE

When the word was passed that Stalder Bros. of Riverside would sell their ranch and big herd of Holsteins at public auction it attracted immediate attention, for the Stalders have long been known as the owners of a wonderful ranch and a herd of cows of the finest type and quality.

A large crowd was present on October 19 when the sale opened and the prices for the horses, implements, hogs, goats and range cattle were fairly good. A couple of thousand Leghorn hens were very much in demand and the price averaged \$1.75 in flocks.

The ranch was sold in two parcels. The 235 acres of low land on which the excellent dairy buildings stand was knocked down to Romie C. Jacks of San Francisco for \$305 an acre. The 399 acres of hill land brought \$105.

The second and third days were devoted to selling the 150 registered Holsteins, most of which were descendants of the great cow Gerben Abbekerk Maid. This cow was one of the original pure bred in the Stalder herd and three times made over 30

pounds of butter in seven days—two of these records being over 34 pounds. She is also a remarkable breeding cow, having dropped nine living calves in eight years.

Her son, King Pontiac Netherland Segis 3rd, has been the herd sire at Rosamines Ranch for the past five years and her descendants in the sale numbered 105.

The top animal of the sale was the young bull, Sir Ormsby Skylark Raurerd, the 34 pound son of Sir Ormsby Skylark, whom A. J. Stalder bought from D. J. Maxwell of Waterloo, Iowa. He was knocked down to Cash & Kyne of Perris for \$3,500.

The senior herd sire, King Pontiac Netherland Segis 3rd, went to Bost & Johnson of Chino for \$2,900.

The top cow was Rosamaines Duchess Ormsby, a daughter of Gerben Abbekerk Maid, with a three year old record of 20.68 pounds of butter in seven days. She was sold to Judge Morrison of Los Angeles for his ranch in the Antelope Valley for \$2,100.

Earl Graham of Compton bought three or four of the good ones for high prices, including the beautiful heifer, Miss Segis Pontiac Walker, for which he paid \$1,700.

R. N. Clapp of Nuevo was the heaviest purchaser and laid in a supply of the tops, including the foundation cow, Gerben Abbekerk Maid.

When A. J. Stalder found out the kind of cow Gerben was he bought six of her half-sisters by the same sire, Sir Skylark Ormsby Hengerveld, and all of them have proven to be real producers. D. G. Maxwell of Waterloo, Iowa, who is moving his great herd of Ormsbys to the San Fernando Valley, was present and purchased every one of these young cows, as

their breeding follows very closely the lines he believes to be the best.

Carl Ray and Fred Hartsook of Lankershim were both heavy buyers of excellent animals.

The total of the sale amounted to \$71,954, or an average of nearly \$525 per head. Considering the fact that it was a dispersal sale in which there were many calves and young bulls, this average proves that there is no better nor quicker way to make money than in raising the right kind of pure bred Holsteins.

The sale was very ably handled by Chas. L. Hughes of the California Breeders Sales and Pedigree Company and the old reliable, Col. Ben A. Rhoades, was on the block.

The purchasers were Bost & John-

son, Cash & Kyne, Pottenger Sanatorium, R. N. Clapp, Romie C. Jacks, Burr Farm, W. B. Mills, Mrs. Donders, C. V. Harris, L. B. Van Blaricon, Judge Morrison, D. G. Maxwell, San Diego County Farm, Carl Ray, Fred Hartsook, Arden Daisy, F. T. Underhill, F. F. Pellissier, Earl Graham, R. L. Holmes and Gotshall & Magruder.

Russia, before the war, occupied first place as a timber exporter. When settled conditions shall again obtain, Russia will export timber in much greater quantities than ever. Its timber resources, occupying an area three times the timbered area of the United States and Canada combined, will permit greater exploitation than in the past.

Your Herd-Sire Is Your Herd-Builder

You want to increase your herd's production.

Then look well to the selection of your herd sire—

for he is your herd-builder—

your production-builder.

Pure-Bred Sire Brings 233% Increase in Milk

As an example—take the experience of the Iowa Experiment Station in 1907. Several native scrub cows averaging 3,660 lbs. milk were bred to pure-bred bulls. Heifers resulting from this cross averaged 5,990 lbs. milk, a 64% increase.

Breeding these heifers to other pure-bred bulls gave grand-daughters, averaging 8,401 lbs. of milk, or 2 1-3 times as much as the original scrubs. (233% increase.) You, too, can increase the production of your herd in a like manner. Not only that—but you increase the value of your herd as well.

If you want to build a high-producing herd—head it with a son of **MATADOR SEGIS WALKER**.

His GET (shown above) took 10 out of 23 first prizes at last year's Portland Livestock Show.

His daughters are making wonderful records in all tests from 7 to 365 days. Before long Matador will be a century Sire.

A son of Matador—at the head of your herd—will bring to it the transmitting ability that will go a long way toward increasing your milk production and profits.

Vote Down Number 7

By R. P. Royce

THE voters of California will once more be confronted with an initiative measure seeking to abolish the use of animals in scientific investigation. That measure is "Initiative Measure No. 7," and the California Cultivator again takes opportunity to call to the attention of our readers the extreme importance of defeating this measure—and defeating it so emphatically that it will be a long time before its promoters will again present it.

Measure No. 7 is known as the "anti-vivisection" measure. Vivisection is defined as "the dissection of or operation on a living animal for physiological or pathological investigation." The measure, therefore, seeks to make impossible such practice.

Sounds innocent enough, but underneath it constitutes one of the most harmful, even dangerous, measures with which the intelligence of California voters has been assaulted.

If No. 7 is not defeated, here is what the livestock industry will be up against:

1. The manufacture of hog cholera serums and virus will be stopped and the entire pork industry will be menaced, possibly destroyed.
2. The manufacture and distribution of protective serums for the prevention and cure of anthrax, black-leg and many other animal diseases will be prevented.

vention and cure of anthrax, black-leg and many other animal diseases will be prevented.

3. The investigations carried on for the discovery of means and methods to prevent, control, cure and eradicate other infectious and contagious diseases that levy a terrible toll each year on the livestock industry will be presented.

4. So drastic is the proposed measure that even nutrition experiments and trials that seek to point the way to more economical production will be prohibited.

5. The very health and life of the community will be menaced by the stopping of the manufacture of serums, vaccines, etc., discovered, proved and made possible through the scientific use of the lower forms of animal life.

Why place absurd values on rats, mice, guinea pigs, etc., when it is known that only through intelligent use of such forms of life have we come into possession of our present fund of knowledge relating to the causes and cures of many of the diseases once regarded as scourges.

Be on your guard! Go to the polls! Vote "No" on Initiative Measure No. 7 for your own protection and the protection of your industry.

Silo Filling

SILO filling as they do it in the corn belt, as given by a writer in Wallace's Farmer of Des Moines, Iowa:

Only a half dozen really big new ideas have hit the corn belt during the past 30 years. The growing of alfalfa has made a great change in many sections, and so also has the self feeding of corn and tankage to pigs, but probably the most worth while of all the new things is the silo. Twenty years ago there were a few silos here and there in the dairy sections, but scarcely any in the main part of the corn belt. Then along about 1904 the Indiana station began experimenting with silage as a feed for fattening cattle and found that it was worth just as much for fattening cattle as it was for dairy cattle. In fact, most of the experiments indicated that it was worth more. And then along about 1914 the Iowa, Missouri and Pennsylvania experiment stations began experimenting with feeding fattening steers as much as 60 pounds of silage daily, with scarcely any hay or corn. They found that steers could be made really fat with an average daily ration of 50 pounds of silage, two or three pounds of hay and two or three pounds of oil meal or cotton seed meal. And now silos are found everywhere over the corn belt where cattle are raised at all extensively, except in sections where hay is unusually cheap and corn is rather expensive. In western Kansas and Nebraska, for instance, alfalfa hay is relatively cheaper than corn, and for this reason we find very few silos in these sections. In the rougher parts of the corn belt along the rivers hay seems to be enough cheaper than corn so that silos are not so very common.

Perhaps you don't have a silo on your place yet. Nevertheless, there are probably silos in the neighborhood, and if you get an opportunity to help at silo filling time this year, let me suggest that you take advantage of it. Silos are going to become more and more common right along, and if you intend farming for yourself it will be a good plan for you to learn all there is to be known about silo filling.

First, just when should you cut corn for the silo? In the old days people thought that corn should be cut when it was in the milk stage, and all the leaves were green and the stalks very juicy. Then the chemists at the experiment stations told the people that at this stage the corn contained about twice as much water and only half as much dry matter as it did later. Some of the people then went to the other extreme and put their corn in the silo in early October, when it was almost dead ripe. It was found that this kind of corn did not pack together tightly,

and that there was considerable danger of molding unless about a half ton of water was added to each ton of silage as fast as it was put in. The happy medium is when the kernels are all glazed and most of them dented, but while most of the leaves are yet green. The leaves are of great feeding value, and if the leaves have begun to dry up it is a good plan to cut the corn for silage even though most of the kernels have not yet dented.

When you help at silo filling time there are several things which you can watch with considerable interest. If water is being added to the silage, notice just how they do it. Do they let the water run in at the lower part of the blower pipe and blow the water up with the silage, or do they let the water mix with the silage at the upper end of the blower pipe? Or perhaps they run water on the silage every noon and every evening after the filling stops. Notice the different ways and try to figure out for yourself which is the easiest and which makes the best silage.

Another thing to watch is the method which different people use in keeping the silage tramped down. Some people keep only one man in the silo to move the distributor pipe around and do the tramping. Other people keep three men. Some people keep one man during the first part of the filling and three men during the last part. One thing is quite certain, and that is that corn which is cut rather green doesn't need so many men to tramp it as corn which is almost ripe, and which is having water added to it. Also, it seems a reasonable proposition to do the most tramping during the last part of the filling, for the reason that the first part of the filling is packed together tightly by the mere weight of the silage pressing from above. Personally, I have seen some very good silage come from silos where there was scarcely any tramping done, and I have seen moldy silage from silos where there was lots of tramping, but on the average tramped silage seems to keep better than silage which is not tramped.

With a big cutter and a powerful engine, it is sometimes possible to fill a fairly large silo in a single day. This means that the silage will probably settle five to ten feet, and that if the silage space is to be used to the best advantage there must be some refilling later on.

Watch the man who feeds the corn into the silage cutter. He has the most important job of all, and the chances are that he knows more about silo filling than any other man in the gang. If he believes in working hard himself he can keep the work speeded up amazingly all along the line. Watch

how often he likes to have his knives sharpened. There seems to be some difference of opinion on this matter. Some people like to have two sets of knives which are alternated every half day, while the other set is being sharpened up. Other people claim that the thing to do is to keep the knives set just right so that they sharpen themselves.

When the silo is nearly full it is a good plan to husk the ear corn out of the last load and run in just the stalks. The top seven or eight inches of silage is almost sure to spoil, and it is a good plan not to run any good ear corn in with the top foot where there is any danger of spoiling. It helps to reduce spoiling to add a lot of water to the top of the silo, and to tramp thoroughly so as to shut out air as completely as possible.

Silage is such an important winter feed that people are constantly thinking of new ideas. Why not use some other crop than corn for silage? Accordingly, someone in Montana experimented with sunflowers and found that under Montana conditions sunflowers yielded far more than corn and made almost as good silage. In western Kansas they tried sorghum or cane and found that under drouth conditions sorghum or cane yielded more silage and was almost as good as corn silage. There are certain very tall growing kinds of Southern corn which may be used for silage instead of our regular Reid's Yellow Dent or Silver King, as the case may be. These late growing sorts as they exist today are too late to be practical under corn belt conditions, but there is a chance that

we can yet devise a moderately early corn with a much larger stalk than the common varieties that are grown today.

Different kinds of improvements are being made in silo filling machinery. For instance, there is a rather new machine which has a husker attachment on the silage cutter, so that only the stalks are sent into the silo. This makes what is called stover silage. Stover silage, since it has no grain in it, is not as good as ordinary silage, but it is far cheaper. It is possible to winter cattle through at an expense only about one-third as great as with ordinary silage. For fattening cattle, stover silage may not be worth while, but for cattle which are being roughed along it seems to be decidedly worth while. In such a case there seems to be a decided advantage in saving for the hogs the corn which otherwise would have gone into the silo.

Another new silage machine is one which cuts the corn into small pieces in the field and elevates these finely cut pieces into a wagon, which hauls it to the silo, where it is blown up with far less power than otherwise would be necessary. It is claimed that this machine does away with the work of two or three men and perhaps a team or two.

Doubtless many other new things will be discovered in the way of making silage, and some of these new things, after being tried out for a number of years, will become widely adopted. Keep your eyes open, for there are going to be great changes in the making and feeding of silage during the next 20 years.

Riverside Livestock Awards

The wonderful showing of livestock made at the Southern California fair at Riverside was described in Mr. Klein's article in last issue. Awards had not been made so that they could be used in that issue so the greater portion of them are given below:

Shorthorns

Exhibitors: Thos. B. Dibblee Estate, Lompoc; William Bond, Newark; F. L. Hall, Perris; F. C. Collier, Wildomar.

Bull, 3 and over—1, Hall on Knight's Crown.
Bull, 2 and over—1, Bond on Cumberland Gloster. 2, Collier on Orange Flash.
Bull, senior yearling—1, Dibblee Estate on Baron Lancaster.
Bull, junior yearling—1, Hall on Royal Broadhooks.

Bull, senior calf—1, Dibblee Estate on Silver Cup. 2, Dibblee Estate on Baronson. 3, Collier on Palomar.

Bull, junior calf—1, Bond on Cumberland Goods. 2, Dibblee Estate on Sterling Lancaster. 3, Dibblee Estate on Royal Clansman.

Cow, 3 and over—1, Dibblee on Bright Bess of Collynie. 2, Bond on Mayfield Victoria. 3, Hall on Moss Rose.

Cow, 2 and over—1, Bond on Ormondale Maid 2nd. 2, Collier on Palomar Maid.

Heifer, senior yearling—1, Dibblee on Orange Blossom "A". 2, Collier on Palomar Lil.

Heifer, junior yearling—1, Bond on Cumberland Maid. 2, Dibblee on Secret Clipper. 3, Bond on Cumberland Sunrise.

Heifer, senior calf—1, Dibblee on Village Ruby. 2, Dibblee on Village Fair Girl. 3, Bond on White Cumberland.

Heifer, junior calf—1, Dibblee on Princess Royal. 2, Dibblee on Lavender Queen 5th. 3, Dibblee on Lady Acanthus 2nd.

Aged herd—1, Bond. 2, Hall.
Young herd—1, Dibblee. 2, Hall.

Calf herd—1 and 2, Dibblee.
Four animals, either sex, get of one sire—1, Dibblee. 2, Bond.

Two animals, either sex, produce of one cow—1, Bond. 2, Dibblee.
Senior champion bull—Bond on Cumberland Gloster.

Junior champion bull—Dibblee on Silver Cup.

Senior champion cow—Bond on Ormondale Maid 2nd.

Junior champion cow—Dibblee on Princess Royal.

Grand champion bull—Dibblee on Silver Cup.

Reserve grand champion bull—Bond on Cumberland Gloster.

Grand champion cow—Bond on Ormondale Maid 2nd.

Reserve grand champion cow—Dibblee on Princess Royal.

Herefords

Bull, 3 and over—1, Jacks on Paragon Dare.

Bull, 2 and over—1, Jacks on Woodford 34th.

Bull, senior yearling—1, Jacks on Beau Blanc Visage 9th.

Bull, junior yearling—1, Jacks on Wyomings Type.

Bull, senior calf—1, Jacks on Crimean 1st.

Cow, 3 and over—1, Jacks on Miss Debonair 4th.

Cow, 2 and over—1, Jacks on Bocaldo Beauty. 2, Jacks on Ga. Princess 10th.

Heifer, junior yearling—1, Jacks on Ruth Domino. 2, Jacks on Belle Grove.

Heifer, senior calf—1, Jacks on Miss Domino 9th.

Heifer, junior calf—1, Jacks on Dainty Dare.

Aged herd—1, Jacks.

Young herd—1, Jacks.

Calf herd—1, Jacks.

Senior champion bull—Jacks on Woodford 34th.

Junior champion bull—Jacks on Wyomings Type.

Grand champion bull—Jacks on Woodford 34th.

Senior champion cow—Jacks on Bocaldo Beauty.

Junior champion cow—Jacks on Ruth Domino.

Grand champion cow—Jacks on Bocaldo Beauty.

Aberdeen-Angus

Bull, 3 and over—1, Congden & Battles on Prizemere 5th.

Bull, 2 and over—1, Congden & Battles on Knight of Rosemere.

Bull, senior yearling—1, Congden & Battles on Prizemere 8th.

Bull, junior yearling—1, Congden & Battles on Prideman C. B. 5th.

Bull, senior calf—1, Congden & Battles on Ericman C. B. 5th.

Bull, junior calf—1, Congden & Battles on Prizemere 15th. 2, Lilac Ranch on Kenmure of Lilac.

Cow, 3 and over—1, Congden & Battles.

Cow, 2 and over—1, Congden & Battles on Pride C. B. 5th.

Heifer, junior yearling—1, Lilac Ranch on Rose of Rosemere 7th.

Heifer, junior yearling—1, Congden & Battles on Blackbird of Rosemere 42nd.

Heifer, senior calf—1, Lilac Ranch on Esica of Lilac 1st. 2, Lilac Ranch on Blackbird of Lilac 1st. 3, Congden & Battles on Pride of Rosemere 37th.

Heifer, junior calf—1, Congden & Battles on Rose of Rosemere 8th.

Aged herd—1, Congden & Battles.

Young herd—1, Congden & Battles.

Calf herd—1, Congden & Battles. 2, Lilac Ranch.

Two animals, either sex, get of one sire—1, Lilac Ranch.

Two animals, produce of one dam—1, Congden & Battles.

Senior champion bull—Congden & Battles on Prizemere 5th.

Junior champion bull—Congden & Battles on Prideman C. B. 5th.

Senior champion cow—Congden & Battles on Pride C. B. 5th.

Junior champion cow—Congden & Battles on Prideman C. B. 5th.

Grand champion bull—Congden & Battles on Prideman C. B. 5th.

Grand champion cow—Congden & Battles on Pride C. B. 5th.

Baby beef, under one year—1, Congden & Battles on Prideman C. B. 14th.

Hereford Breeders!

The three events outlined below will afford the most attractive opportunity for selection of registered Hereford breeding animals that has yet been presented in the west, and among the 150 head to be sold are individuals of ages, blood lines, and type to meet a wide demand. These sales will be a real buying opportunity, all at

State Fair Grounds, Sacramento, Cal. Thursday, November 4 45—Registered Herefords—45

The cattle for this offering have been personally selected and passed upon by Mr. Frank Van Natta of Indiana, representing the American Hereford Cattle Breeders Association, and every individual has been judged worthy a place in this sale, the object of which is to place before the buying public the highest class cattle that have yet appeared in an Association sale in California.

After the above statement it is hardly necessary to add that the buyer of real top breeding and type will find a rare selection in this offering, animals with which the owners have parted with great reluctance in many instances.

Contributors to sale:

J. H. CAZIER & SONS CO., Wells, Nev.	H. M. BARNGROVER, Santa Clara, Calif.
UNIVERSITY OF NEVADA, Reno, Nev.	CHAS. RULE, Jenner, Calif.
ED. T. MORGAN, Northam, Nev.	J. A. BUNTING, Mission San Jose, Calif.

Sale under auspices of

Pacific Coast Hereford Cattle Breeders Association

J. I. Cazier, Pres., Wells, Nev. J. A. Bunting, Sec., Mission San Jose, Calif.

Friday November 5, Nevada Hereford Ranch Sells 55—Registered Herefords—55

With 200 registered breeding cows in its herd, the result of 16 years experience with registered Herefords, with a remarkable history of good health, and with a most satisfactory amount of good breeding and good type, the owners are here making a notable offering in their first individual public sale.

Beau Blanchard 76th

Harris Standard 2nd

Beau Blanchard 76th was Grand Champion bull at 1920 California State Fair and Los Angeles Livestock Show. One of his junior calf sons out of a Harris Standard 2nd dam was junior champion at Sacramento, and another similarly bred was junior champion at Los Angeles.

Harris Standard 2nd is as well bred as any bull in the United States, and the Nevada Hereford Ranch show herd for the past three years has been composed almost entirely of his get, winning consistently wherever shown. As a breeding bull he is widely recognized as a foremost sire in the west.

30 Daughters of Harris Standard 2d, bred to Beau Blanchard 76th, will be a feature of this offering.

Added Attractions: At the last moment the owners have decided to include Donna C a richly bred 2 year old Anxiety heifer, safe in calf to Beau Blanchard, the greatest living Anxiety bull, and Dew Drop, a 2 year old daughter of Beau Perfect, safe in calf to Dandy Mischief, one of Mousel Bros.' famous sires.

5 Choice Young Bulls

A few selected bulls will round out this offering, and they are of the quality for which this herd is justly famous.

Owners:

J. H. CAZIER & SONS CO., WELLS, NEVADA.

Saturday November 6 50---Registered Herefords---50

Most of the individuals in this offering were bred in the well known herd formerly owned by Governor Packard of Arizona, and contains a very large percentage of heifers, many of their dams now being in the herds of Mr. J. A. Bunting, Mission San Jose, Calif., and Mr. Ed T. Morgan, Northam, Nev. Included in the list will be found:

22 Daughters of Bourbon Columbus, out of dams by Beau Tempter, Beau Donald, Repeater 9th, Rupert Donald, and Perfect Donald.

5 Daughters of Beau Fairfax, out of dams by Beau Tempter, Erling March On, Rupert Donald, and Woodford 2nd.

8 Daughters of Don Perfect 10th, out of dams by Paloma's Erling, Beau Tempter, Don Brummel, and Beau Donald.

4 Daughters of Beau Tempter, out of dams by Rupert Donald and Columbus Busybody.

Many of these choice young females are bred to

Maples Lad 137th, who is by the famous show and breeding bull, Bonnie Brae 8th, and out of a daughter of Domino.

Grand champion boar—Humphrey on Escalon Big Joe.

Reserve grand champion boar—Humphrey on Escalon Model Leader.

—REGISTERED---FEDERAL TESTED—

150 HOLSTEINS 150

At Public Auction

State Fair Grounds, Sacramento, Cal.

November 10-11, 1920

Toyon Farm Association, with a total of 350 registered Holsteins on their farms, have decided to consolidate their Holsteins into one herd on the Brentwood Farm, and to conform with present accommodations on this farm, a reduction is necessary. This sale will be the means of making the reduction, and some of the most promising cows and heifers in the entire holdings will sell. The offering will include approximately

100 COWS
of Milking Age

30 HEIFERS
Bred and Open

25 BULLS
Mostly Ready for Service

The female offering contains the largest number of yearly record cows and heifers, daughters of yearly record dams, and females now on yearly test, that have yet appeared in a western sale.

The breeding of the offering throughout is most substantial and popular, and the type of the offering is especially satisfactory. A general summary of some of the individuals and groups includes:

14 DAUGHTERS OF SIR BESSIE FOBES TRITOMIA, who is by Fobes Tritomia Mutual De Kol, and out of Jessie Fobes Bessie Homestead, 34.96 lbs. butter in 7 days as a 4-year-old, 932.74 lbs. butter in one year at mature age, and she topped the Detroit National Sale at \$4,600.00. These are out of dams with records up to over 27 lbs. butter in 7 days, and several out of dams now making good yearly records or with yearly records already completed.

2 DAUGHTERS OF SIR ORMSBY BURKE SEGIS, both with good records and out of good record dams.

A DAUGHTER of Johanna Colantha Champion, with 568.58 lbs. butter to her credit in 296 days as a 3-year-old.

A 24-POUND DAUGHTER of Sir Korndyke Hengerveld De Kol 31st, with 644.30 lbs. butter in one year as a 4-year-old.

A 23-POUND DAUGHTER of Sir Korndyke Hengerveld De Kol 11th, out of a 26.08-lb. 2-year-old daughter of a 31-lb. cow.

A 23-POUND COW with 627.50 lbs. butter in one year, again on yearly test with 443.19 lbs. butter to her credit in 198 days.

A 21-POUND DAUGHTER of Sir Fayne Concordia, with 630.75 lbs. butter in one year as a 4-year-old, out of a daughter of King Segis Pontiac.

A 24-POUND GRANDDAUGHTER of Colantha Johanna Lad, with 628.60 lbs. butter in one year.

A 23-POUND granddaughter of King Walker, bred to Sir Aaggie Mead.

A 21-POUND 3-YEAR-OLD, with 760.01 lbs. butter in one year.

A 19-POUND 3-YEAR-OLD daughter of Sir Korndyke Pietertje Hartog, with 760 lbs. butter from over 18,000 lbs. milk in one year.

A 4-YEAR-OLD with 403.47 lbs. butter to her credit in 232 days, her dam a 26-lb. cow.

A 19-POUND 4-YEAR-OLD with 358.74 lbs. butter to her credit in 184 days, her dam a 20-lb. 4-year-old granddaughter of Pontiac Korndyke.

A 19-POUND 3-YEAR-OLD with 318.26 lbs. butter to her credit in 137 days. By a son of Vickery Vale, 937.35 lbs. butter from 21,550.6 lbs. milk in one year.

A 23-POUND DAUGHTER of Colantha Johanna Champion out of a 20-lb. dam.

A 21-POUND granddaughter of Homestead Grl De Kol Sarcastic Lad, out of a 23-lb. dam.

A DAUGHTER of Sir Cascade Blossom Fayne, calving at 19 months has to her credit 379.92 lbs. butter in 244 days. Her dam now on yearly test with over 600 lbs. butter to her credit as a 3-year-old.

A GRANDDAUGHTER of Sir Korndyke Hengerveld De Kol, out of a dam that made 799.20 lbs. butter in one year as a 3-year-old.

A DAUGHTER of Sir Johanna Ruth Fayne, with 320.50 lbs. butter to her credit in 126 days, and bred to Sir Pietertje Ormsby Mercedes 43d.

A 2-YEAR-OLD daughter of Sir Johanna Ruth Fayne, bred to Sir Aaggie Mead.

A 2-YEAR-OLD daughter of Chima-cum Spring Farm King Pontiac, bred to Sir Aaggie Mead.

A 21-POUND 4-YEAR-OLD daughter of Sir Korndyke Ormsby De Kol, with 520.33 lbs. butter to her credit in 278 days.

A GRANDDAUGHTER of Sir Korndyke Hengerveld De Kol, out of a dam that made 704 lbs. butter in one year.

A DAUGHTER of North Star Happy Bonheur, out of a dam that made 799.20 lbs. butter in one year as a 3-year-old.

A 2-YEAR-OLD daughter of Sir Skylark Ormsby Hengerveld, now doing well on yearly test, and bred to Sir Pietertje Ormsby Canary.

A 643-POUND YEARLY RECORD COW, bred to Sir Pietertje Ormsby Canary.

A 17-POUND 2-YEAR-OLD granddaughter of Friend Hengerveld De Kol Butter Boy, out of a 644-lb. 4-year-old yearly record dam, second dam a 24-lb. 3-year-old, third dam a 22-lb. cow with 971.56 lbs. butter in one year.

DOZENS OF OTHERS with records up to over 24 lbs. butter in 7 days, many with yearly records or now on yearly test.

Females of Breeding Age in Calf to These Bulls:

SIR PIETERTJE ORMSBY MERCEDES 43D, whose sire is the world famous Sir Pietertje Ormsby Mercedes, and whose dam, Aaggie Wayne Peep, holds the world's record for butter production for five years, 4,992.03 lbs. from 110,706.5 lbs. milk.

SIR PIETERTJE ORMSBY CANARY, also by Sir Pietertje Ormsby Mercedes, and out of an 862.88-lb. record 3-year-old whose dam made 1,009.87 lbs. butter in one year.

SIR AAGGIE MEAD, by Sir Aaggie De Kol Acme, son of the world's record Aaggie Acme of Riverside 2nd, and out of the 1,215-lb. strictly official record cow Aralia De Kol Mead, her dam the 1,142-lb. former world's record cow Aralia De Kol.

What Are These Things Worth to You as a Buyer?

This is the first entire offering of Federal tested cattle ever made in California.

No animal of breeding age, except fresh cows, will be offered unless believed to be safe in calf.

Note again the splendid breeding of the five bulls whose service these females carry. Their offspring

HAZELWOOD DE KOL HENGERVERELD, by a proven grandson of Hengerveld De Kol and out of the 33.79-lb. cow Bonnie Lass Pauline, dam of Bonnie Ormsby Lass, Grand Champion cow at Panama-Pacific International Exposition.

NORTH STAR HAPPY BONHEUR, who is by Johanna Bonheur Champion a son of the famous show and breeding cow Johanna Bonheur, 890.84 lbs. butter in one year, and by a son of the former world's record cow Colantha 4th's Johanna, 1,247.83 lbs. butter in one year. His dam is a 30-lb. cow with 657.19 lbs. butter in 349 days, and she is by a son of the 813.30-lb. yearly record cow Lady Ormsby. This bull will be sold in the sale.

will carry splendid value anywhere.

There will not be more than three females in the sale with blemished udders.

Every animal positively guaranteed to be a breeder; every animal with individual Federal tuberculin test certificates, and sold subject to retest.

25 Bulls of Substantial Merit

While some of the bulls in this offering would not be out of place at the head of registered herds, yet it is hoped to make the offering of especial attraction to dairymen. A very large percentage of these bulls are ready for service, many of them out of dams now making splendid yearly records.

Plan now to attend this sale, for it is an offering of breeding animals combining qualities of type, production, breeding, and good health such as has seldom if ever been made in a sale of like magnitude in the west.

Livestock News Notes

LIVESTOCK SALE CALENDAR

Holsteins

November 10-11, Toyon Farms Association Sale at Sacramento.

December 1, H. E. Vogel, Fresno.

December 2, Consignment Sale, Tulare.

December 16-17, Consignment Sale, Sacramento.

Herefords

November 4, Pacific Coast Hereford Breeders' Association, Sacramento.

November 5, J. H. Cazler & Sons, Sacramento.

November 6, H. M. Barngrover, Sacramento.

November 18, Finnel Ranch Company, Sacramento.

Shorthorns

November 16, Caledonia Farms, West Sacramento.

Professor E. H. Hughes, in charge of the swine department, University of California, has recently purchased the aged Berkshire boar, Ames Rival, 118th from F. L. Hall, Perris, to be used in the university herd. Ames Rival 118th was sired by Rival's Champion Best and is therefore a half brother to the noted Laurel Champion and other prominent boars.

Professor Gordon H. True, head of the animal husbandry division, University of California, who is on a year's leave of absence, sailed October 6 to Hawaii where he will judge the annual fair on the island of Maui. Professor True plans to return to the mainland in time to attend the Portland livestock show.

It has been announced that the following California breeders will make exhibits at the Pacific International to be held at Portland next month: T. S. Glide, Davis; Pacheco Cattle Company, Hollister, and William Bond, Newark, will show Shorthorns. Mrs. Anita M. Baldwin, Santa Anita; Burr Farm, Los Angeles; W. J. Higdon, Tulare; George Junior Republic, Chino; and Stalder Bros., Riverside, will show Holsteins. The University of California will also show fat steers, barrows and wethers.

Jack Borge, Duroc breeder of Dos Palos, reports the following sales: four boars to Miller and Lux; two boars to Manuel Bettencourt, Ollima; a boar and gilt to Marshall and Co., Los Banos, and sows to B. B. Shaw, Hollister; Leek and Gelerti, Dos Palos.

Perfection Fairfax, one of the greatest sires ever produced in the Hereford breed, died last month at the home of his former owner, Warren T. McCray, Kentland, Indiana, at the age of 17 years. Perfection Fairfax was largely responsible for the many sensational sales held by McCray, his get being held in high esteem by all breeders.

Gretel's Son, 4-year-old buck, half brother to California Gretel, the world's record milch goat, and head of the Toggenburg flock at the University of California farm, Davis, for several years, and El Chivar's Hertha, one of the choicest Toggenburg does in the herd at the university farm, were among the goats sent recently from the university farm to the agricultural experiment station of Hawaii.

These animals will be foundation stock for a herd of Toggenburgs at the Hawaiian experiment station.

J. Henry Meyer has appointed L. W. Wing as manager of Elkhorn Farm, near Watsonville, where a very high class herd of purebred Ayrshires is maintained. For the last three years Mr. Wing has been associate professor of dairy production at the Oregon Agricultural College. Previous to this he taught at the University of Missouri for two years, and it was from that institution he received a masters degree. He also spent one year at Cornell University taking special graduate work.

Distribution of excess profits made

by dealers who handled the wool clip in 1918 under regulations of the war industries board is being made by the United States department of agriculture to some 100,000 wool growers. It is estimated by the bureau of markets, which has charge of making the refund from the dealers to the growers, that the total amount of such excess profits was more than \$1,000,000, of which approximately \$460,000 has been turned over to the bureau for distribution.

Records in Guernsey cattle prices were not only maintained but passed at the recent Langwater farm sale in Massachusetts. F. Lothrop Ames sold at auction 51 Guernsey cattle for a total of \$146,125, an average of \$2,865. The Ames sale in October, 1916, averaged \$1,075 for 75 head, which at that time was far ahead of any previous sale.

The 16 daughters of a single bull, Langwater Warrior, sold for \$88,525, an average of \$5,533.

Langwater Steadfast, a 6-year-old bull, was sold privately by Mr. Ames to George Cluett, New York, for \$25,000.

Rebecca of Sunny View, a Guernsey cow owned by Hollow-Hill Farm, Colton, has completed a record of 11,730.1 pounds of milk and 647.86 pounds of butter fat in the senior four year old division of the Roll of Honor. This record entitles her to eighth place in her class. Rebecca of Sunny View won first in produce of dam at the 1920 California state fair. Her two sons are Reuben King of Hollow-Hill Farm and Reuben Langdon of Hollow-Hill Farm. Both bulls won first prizes in their respective classes at the same fair. Reuben King of Hollow-Hill Farm was awarded the junior championship, and was a member of the first prize breeders' young herd.

W. H. Dupee, Hollow Hill Farm, A. B. Humphrey and Russell S. Cox of San Marcos were the exhibitors in the Guernsey show. J. B. Fitch of the Kansas agricultural college, who tied the ribbons, said that the classes shown would do credit to any Eastern fair or to the National Dairy Show.

Masterpiece of Edgemoor, owned by Dupee, was right up on his toes and defeated his stable mate, Vedas May King of Edgemoor, who was grand champion at Los Angeles, in the senior yearling bull class, and was eventually made grand champion. Dupee's cow, Imp. Cheminante 11th, the Los Angeles grand champion, did not show in good condition and was second to Imp. Cherry 3rd of the Effords, owned by Hollow Hill Farm. This winning made Cherry an easy senior and grand

Shorthorn Cattle Make Good

The good milking, well fleshed Shorthorn cow is the popular favorite on the farms. Shorthorn steers are continually selling at the top of the markets. Shorthorn cows are making milk records far in excess of many strictly dairy-bred cows. Use a Shorthorn bull and put in two or three well bred Shorthorn females.

"LITTLE THINGS"

That Guarantee Little Trouble and Little Expense

Besides the supreme United States qualities of close skimming, easy turning and easy cleaning—features of which the owner is conscious in every-day use—here are a few of the construction details that stamp the United States Cream Separator as a fine, long-lived, finished mechanism:

One-piece sanitary frame—easy to clean; heavy enough to prevent excessive vibration.

All gears enclosed; no wear from grit and dust.

Automatic oil-splash system—introduced by the United States; imitated by others.

Low and most practical-shaped supply can.

These and many other superiorities guarantee freedom from disappointment and frequent repairs.

Write for catalog and convince yourself that your next separator is to be a United States.

Second Public Sale

Caledonia Farms' Shorthorns

West Sacramento, Cal.
Friday, November 12

60 Scotch and Scotch Topped Shorthorns

IMP. CALEDONIA

THE OFFERING

30
Cows

Fifteen of them will sell with calves at foot, and a large proportion of the balance are heavy in calf. Practically all the calves and services are by Imp. Caledonia, Gainford Matchless and Pine Grove King. The females are by such noted sires as Glenbrook Marquis, Pine Grove King, Imp. Champion of Scotland, Fond Lavender, College Count, Whitehall of Orange, Lavender Viscount and others. Few offerings have included more of the blood of Whitehall Sultan.

20
Heifers

The heifers, most of which are well along to their first service, constitute a wealth of desirable herd material. In breeding they carry many of the best blood lines and individually they are of correct type. These young things can be taken into any herd with full assurance that they will grow into most profitable investments.

10
Bulls

Among the ten young bulls are several of excellent Scotch breeding while the others are well bred American sorts. Men in need of moderate priced herd bulls can buy here to advantage and the man who is interested in the better sort of range bulls cannot afford to overlook this sale. The bulls are well grown and of the type that will surely please. They will not be presented in extreme high condition.

Every animal is guaranteed to be a breeder. Every animal over six months old sells tuberculin tested.

Auctioneers:

Col. Ben A. Rhoades, Los Angeles; Col. John A. Davis, Manteca.

GAINFORD MATCHLESS

GET THIS VALUABLE BLOOD!

Think what it means to have an opportunity to add such notable breeding to your herd. No better breeding is available to western buyers

Imp. CALEDONIA is not only one of the richest bred and most desirable types that have been brought to America in recent years, but he is proving to be a sire of rare ability. Calves by him in Eastern sales have averaged as high as \$1500, and a number have stood well in the larger shows. Caledonia was added to this herd at a very long price and it is certain that his influence on Western Shorthorns will be great. Sons and daughters will come to have high values.

GAINFORD MATCHLESS is a son of the noted sire Gainford Marquis—winner of the get of sire class at the Canadian National for the last ten years—and out of a richly bred dam. He was first as a senior yearling at the International and was grand champion at the San Francisco show in 1919. He is a bull of commanding scale, extremely thick fleshed and boasts of rare quality. His worth is unquestioned.

PINE GROVE KING, son of King Cumberland, has by sheer ability been rated as one of the most impressive bulls owned in the West. Calves by Pine Grove King will be found in many of the best herds in California and in every case they are conceded to be right in every way. Pine Grove King blood is worth as much as any available in the entire West.

Catalog will be mailed on request to the management.

California Breeders Sales and Pedigree Co.
C. L. Hughes, Sales Manager, Sacramento, Cal.

champion. The awards were well split up and everyone got his share.

The beautiful Holstein hull, Dichter Spofford Korndyke Lad 5th, owned by the California George Junior Republic, was again grand champion, and King Korndyke Pontiac Acme, from the Santa Anita Rancho, was junior champion. The dope on grand champion cow was completely upset when F. H. Scribner of Los Angeles, who was pressed in to judge the Holsteins, chose the beautiful senior heifer calf, Anoakla Prince Johanna, belonging to the Santa Anita Rancho. This calf has made wonderful improvement in the past few weeks and she was worthy of the place. Santa Anita Rancho was the big winner in this division, but a number of breeders with a few animals who were showing for the first time were well up in the money.

In the Jerseys the awards were pretty well divided, but J. E. Thorp of Lockeford won both grand championships. Winsor Ranch of Bonita won junior champion bull with Beauty's White Sox. Grant A. Brown of El Monte and F. M. West of Fullerton were also consistent winners.

On account of an enforced attendance at the National Dairy Show, where his judging team won for the second successive year, Judge Fitch was late in arriving and the Ayrshires shown by E. B. MacFarland of San Mateo and A. MacMinn of Litchfield, Arizona, are still to be judged as this report is written.

Marshall and Son of Sebastopol, Sonoma County, announce sale of Headlight who was grand champion at Santa Rosa and reserve champion at the state fair, together with a fine lot of bred sows and gilts, at Santa Rosa fair grounds November 15. Amongst the offering will be pigs and spring boars sired by Headlight.

Harry Redd, who is now in charge of the Jane Garden herd of Holsteins owned by Fred W. Kiesel, Sacramento, is mighty busy this fall with 23 cows and heifers on test and 28 in preparation to go on test as they freshen between now and February 1. The two year old daughter of King Korndyke Pontiac, Jane Garden Magnolia Korndyke, has completed a seven day record of 22.505 pounds butter from 342.7 pounds milk. Two four year old cows have made 24.85 pounds and 24.6 pounds each. Redd is very enthusiastic over a number of prospects he is getting ready.

THE KINGS COUNTY POLAND CHINA SALE

The Poland China Breeders of Kings County held their tenth semi-annual sale of Poland China hogs at Hanford, Wednesday, October 20. The offering was presented in fair condition and taken as a whole was a very good lot. Unfortunately, quite a number of the offering were too young to be in very strong demand with those present. The range of prices was too low for the class of stock offered.

R. L. Waltz, Hanford, purchased the top of the sale, a Kings Timm gilt, consigned by Bassett Bros., at \$150. W. L. Haag & Son secured a choice Yankee Jr. gilt, consigned by Wm. Bernstein, at \$115. A few of the representative sales follow:

- 1, R. L. Waltz, Hanford, \$150.
- 2, W. L. Haag & Son, Hanford, \$115
- 3, Frank Johnson, Hardwick, \$70.
- 4, Chas. Putz, Laton, \$50.
- 14, Bassett Bros., Hanford, \$60.
- 18, Bassett Bros., \$70.
- 22, Allen Milner, Riverside, \$55.
- 23, John Bernstein, Hanford, \$100.
- 27, Geo. B. Hamblin, Hanford, \$90
- 28, Wm. Bernstein, Hanford, \$50.
- 33, Frank Johnson, \$50.
- 35, Bassett Bros., \$75.
- 36, J. H. Crawshaw, Hanford, \$50.
- 37, Fred D. Ross, Hanford, \$80.
- 40, Geo. Hamilton, Hanford, \$65.

CREAMERY OPERATORS CONVENTION

The California Creamery Operators will hold their annual convention in Hanford, November 18-20. This will be one of the most important meetings ever held in California. The matters to be presented are of such importance to the members of this organization that your presence is urgently requested.

Hollow-Hill Farm
GUERNSEYS

Won at the
Southern California Fair

Junior Champion and Reserve Grand Champion Cow on Rosie E. King of Hollow-Hill Farm and Senior and Grand Champion Cow on Imp. Cherry III of the Effards, defeating the best Guernsey females on the Pacific Coast and champions of the National Dairy Show, together with 8 firsts, 6 seconds and 2 thirds in one of the strongest Guernsey shows ever held in the West.

At the Los Angeles Livestock Show we won many prizes and at the State Fair our young stock—

All Bred and Raised at
HOLLOW-HILL FARM

won every first prize and two junior championships together with the coveted First Prize Herd Bred by Exhibitor.

We are ready to supply Guernseys of either sex which combine show type with high production. Consult us regarding foundation animals.

CALEDONIA SHORTHORNS

Imp. Caledonia

Caledonia Shorthorns constitute one of the choicest collections of the breed owned in America. Our herd bulls, Imp. Caledonia, Gainford Matchless, grand champion at the 1910 San Francisco show and Pine Grove King stand out prominently in the West. Our females represent choice Scotch and American families, and are noted for their type and quality. We can at all times furnish foundation material and bulls suitable for any herd or for the range. Our prices are moderate and every animal is guaranteed. Visit our farm and herd. Send for special bull list.

62—Registered Hereford Females—62

At Public Auction

Thursday, November 18, 1920

Finnell Stock Farm Company
Galt, California

Some months ago the owners purchased the entire herd of registered Herefords, numbering 180 head, from Kiesel Land & Stock Co. in Oregon, a larger number than they wish to carry, but it was necessary to buy the entire herd as a lot.

This sale will be the means of reducing the herd to the present capacity of their ranch. We wish to make it plain though that this is not an offering of the culs of the herd, for on the contrary an especial effort has been made to include in the sale list only such females as should prove profitable and satisfactory to the buyer, and in this connection especial attention is directed to the ages of the females.

43 OF THE FEMALES WERE BORN IN 1917 OR LATER
19 (all of the balance) WERE BORN IN 1913 OR LATER

This herd has been handled strictly under range conditions, and the cattle here offered should prove particularly valuable to those who wish to start in the business on a range basis.

The herd is headed by BEAU BLANCHARD 37TH, a son of the famous Beau Blanchard, and SIR THOMAS, both proven breeding bulls, each of which will have a number of desirable daughters in the sale.

Every animal guaranteed to be a breeder; every animal tuberculin tested.

Note—There are 23 yearling and 2 year old bulls in the herd, suitable for range service, not in the sale list, that may be bargained for at private treaty either now or on sale day.

75 Registered Holsteins 75

Of Unusually Good Type, and Most
Substantial Breeding

At Public Auction

Westlawn Farms, Fresno, Cal.
Wednesday, December 1, 1920

Twenty years of constructive breeding, with especial emphasis upon the type of the herd at all times, has resulted in a herd of registered Holsteins at Westlawn Farms that is most desirable in every way.

The owner, Mr. H. E. Vogel, will offer in this sale every female of milking age, some choice bred heifers, and a number of high class young bulls, retaining for his future breeding herd only the young heifers and heifer calves.

BETSEY LAMB PRILLY, the great 35 pound cow, Grand Champion at San Francisco in 1919, will be a star attraction, and she may rightly be rated as one of the most outstanding cows ever led into a public sale ring.

The offering contains many high record cows and heifers and daughters of such cows by richly bred sires, and the bred females are in calf to bulls of the most popular breeding. Watch for detailed announcements beginning next week.

Every animal positively guaranteed to be a breeder; every animal tuberculin tested and sold subject to retest by the buyer.

Fourth Tulare Sale

75---Registered Holsteins---75

Sales Pavilion, Tulare, Cal.

Thursday, December 2, 1920

As the entries for this sale near completion it is evident that buyers will be afforded an opportunity to select from a splendid list of well bred cattle, including a large number of fresh and heavy springing cows, and a most desirable lot of well bred heifers.

There are not many registered Holstein females for sale in the vicinity of this sale, and with the exceptionally bright outlook for the future of the Holstein breeding business this will be a splendid opportunity for the purchase of cattle with which to found new herds.

Consider that in every locality in California there never has been a more favorable time for the dairyman to dispose of his grade cattle and invest in purebreds, for the prices of grades have increased in proportion far beyond the increase in purebred prices, the latter being today upon the soundest sort of basis.

Watch for details of this offering beginning in next issue.

Catalog free on request.

1000 Eggs in Every Hen

New System of Poultry Keeping—Get
Dollar a Dozen Eggs—Famous
Poultryman

TELLS HOW

"The great trouble with the poultry business has always been that the laying life of a hen was too short," says Henry Trafford, International Poultry Expert and Breeder, for nearly eighteen years Editor of Poultry Success.

The average pullet lays 150 eggs. If kept the second year, she may lay 100 more. Then she goes to market. Yet, it has been scientifically established that every pullet is born or hatched with over one thousand minute egg germs in her system—and will lay them on a highly profitable basis over a period of four to six years' time if given proper care.

How to work to get 1,000 eggs from every hen; how to get pullets laying early; how to make the old hens lay like pullets; how to keep up heavy egg production all through cold winter months when eggs are highest; triple egg production; make slacker hens hustle; \$5.00 profit from every hen in six winter months. These and many other money making poultry secrets are contained in Mr. Trafford's "1,000 EGG HEN" system of poultry raising, one copy of which will be sent absolutely free to any reader of this paper who keeps six hens or more. Eggs should go to a dollar or more a dozen this winter. This means big profit to the poultry keeper who gets the eggs. Mr. Trafford tells how. If you keep chickens and want them to make money for you, cut out this ad and send it with your name and address to Henry Trafford, Suite 243-N, Tyne Bldg., Birmingham, N. Y., and a free copy of "THE 1,000 EGG HEN" will be sent by return mail.

Save Money—Buy Pipe From Us

Farmers, Miners, Builders—people in every kind of business are saving money buying used or renewed pipe from us. We sell every kind of pipe. Adventuring With Chickens

By Jean A. Koethen

DEAR DAD: It's wonderful how this California sunshine goes to a body's head. Here I've been planning to write ever since the day we stepped out of the train, but things have kept happening right along, and when my wits weren't fairly jammed over the problem of where to locate, my eyes were so dazzled and my brain so addled with the newness of it all that I couldn't hold a pen. Now that we're settled at last, I may be able to tell you something about it.

We bought rather suddenly, for all our hunting and fussing. A ready stocked poultry ranch was what we were after, you remember, and maybe we should have bought it if we hadn't fallen in with a chap on the train who was going to visit his brother in Gardenwood. This brother has 5,000 hens, and after our friend had hunted him up and washed off a little of the dust of travel, he came and took us out to visit the ranch.

My, but they were a sight, those hens! Every one as white and shiny as if she had just been laundered, with the reddest combs you ever saw and shelling out an egg every other day the year round. Yes, those hens actually average 175 eggs a year, and their owner drives a six-cylinder car and takes a month's vacation every summer.

Well, this man, Mr. B., I'll call him, is an officer in the local poultry association here in Gardenwood, and nothing would do but we must all go with him that evening to the association meeting. That was where our education began. We had thought all we had to do was to hunt up a ranch with a thousand or two shiny White Leghorns, and if we had money enough buy it and settle down to enjoy life while the hens supported us. When we got into the meeting there was a man, a snappy young fellow, with one of those same White Leghorn hens in his hands, and he was explaining about what he called the marks of a laying hen.

Now, Pa, did you ever hear the beat of that? Back in Missouri all hens are layers, and we let them lay till they die of old age, unless a weasel or a skunk catches one. Here in California, this man was saying, they don't count any hen a layer till she has proved that she can lay ten dozen eggs a year. He was talking about type—that was a new word to me, and I guess it will be to you. He said you could tell a good deal about how many eggs a pullet would lay before she ever laid one. Then he showed us the head of the hen he was holding, how small and pretty it was; and her comb not too big, but big enough, not thick but smooth and silky. He said a hen with a big, coarse head and thick, beefy comb would never be a heavy layer. Then he talked about her abdomen, how it ought to be soft and warm, not hard, as if it were covered with a layer of fat, nor dry and shrunken, as if she had no room to put the eggs in after she had started making them. But the most interesting thing to us was what he said about the keel and pelvic bones—lay bones, we used to call them back in Missouri. Of course, when you stop to think of it, it is plain enough that a hen has got to have room in her body if she is going to make eggs, room to put the food she eats and room to lay the white over the yolk and the shell over the white, but who would have thought of measuring the distance from the breast bone to the lay bones to find out whether she had room or not? That is what this man did, and he said too that unless you handled hens in this way or kept a careful record of the eggs they had laid you couldn't tell much about them.

That took the wind out of our sails a little, I tell you, for we knew we couldn't pick out hens that way, even if we understood all the specifications, which we didn't and couldn't all in a minute. The ranchers there seemed to know all about it, though, and every one had something interesting to tell about what he'd noticed and how he picked out his laying hens. I couldn't help nudging Bob and asking him what sort of a flock we would

pick out, but he was listening so hard he didn't even hear me.

Next day Bob and I got a man with an automobile to take us round to see some of the big ranches, and everywhere they were talking about "culling" and "type." It didn't take us long to see that we had something to learn before we could handle a flock of even a thousand hens. We had to begin at the beginning, if there was a beginning, and pick it up gradually, but where was the place to begin, and how should we ever learn? It sure does make a body feel small and ignorant to go over one of those big ranches, with everything going like clockwork, three, four, five, even seven or eight thousand hens, being fed and watered and kept clean and healthy and laying, all by the direction of one man.

"Maybe we'd better just give it up," I told Bob that night when we were back in our room at the hotel. "You can get a job in the city all right." But Bob gritted his teeth the way he does when he knows there is a fight ahead. "We came to California to raise chickens out in the open under God's blue sky, and we're going to do it, Bessie, girl," was all he had to say, and I knew we would have to learn somehow. We always do when Bob talks that way.

Well, the upshot of it all was that one or the other of us remembered about the snappy little chap who was telling those Gardenwood men what

was what with hens. He could tell us what to do, all right. It wasn't hard to get his address, and when his letter came, his advice was right from the shoulder. "You've got to begin at the beginning," he wrote Bob, "and the beginning is a piece of ground with a big patch of green stuff. When you have that and a brooder house you are ready to buy some baby chicks and go to work." Plain as preaching, wasn't it?

So we began to look for a ranch without chickens instead of one with chickens, as we had planned, and it wasn't long till we ran across five acres with a little house that will do to live in for a while. Five acres doesn't look like much land after the quarter section we farmed in Missouri, but people tell us we can do more with five acres in a community where almost everybody else is raising chickens and where we are sure of plenty of water and a good market and a chance to buy feed and sell our eggs through an established organization than with a hundred out in the desert somewhere. The five acres has nothing on it but the little house and half a dozen neglected looking fruit trees, but that is better than having to take out and replant. Now we can arrange things according to the best light to be had. Bob has already written to Washington and Berkeley for circulars and bulletins on laying out a poultry ranch, and I have been to the public library for poultry books. It is surprising how much information is available if you only look for it. Bob's spirits have risen a hundred per cent since we began to study. Next week I will tell you how we are laying out the place.

Poultry Awards at the Livestock Show

The awards in utility classes at Los Angeles Live Stock Show were:

AMERICAN CLASS

Barred Rocks—J. P. White, 4th and 5th cockerels. Mrs. F. P. Roth, 2nd exhib. pen. Gill & Warrick, 1st and 4th cocks; 2nd and 3rd hens; 1st, 2nd and 3rd cockerels; 1st and 2nd pullets; 1st exhib. pen. Mrs. Ben Davis, Jr., 2nd and 3rd cocks; 1st hen; 3rd, 4th and 5th pullets.

Cockerel Bred Barred Rocks—Gill & Warrick, 1st and 2nd hens; 1st and 2nd pullets; 1st exhib. pen. Mrs. E. P. Roth, 3rd hen.

White Leghorns	254	96	186.7	1159

Poultry Queries

Conducted by J. A. Koethen

Poor Appetites

My chickens are recovering from chickenpox complicated in the end with roup. Their quarters are dry, but I fear they are slightly overcrowded. We feed mash of fish meal and bran in the morning, rolled barley at noon, milo at night, with beet tops, chard and kale for greens, but the hens do not seem to care about eating. What shall I do for them?—Subscriber, Westminster.

Make sure first of all that your hens are not crowded. If you have not sufficient house room, cull till there are no more hens than can be housed comfortably. It is better to keep 25 hens and make them comfortable than 50 in crowded quarters. Nothing is more productive of roup than overcrowding. When you have them thinned out so that each hen has three square feet of floor space you are ready to change their ration. Every laying flock should have a laying mash before it all the time. You can buy this ready prepared or mix it yourself by one of the formulas given from time to time in this column or sent out by the state experiment station at Berkeley. Fish meal and bran alone is not sufficient, and it would be better not to use fish meal exclusively for animal protein. Half fish and half meat meal is better, or you might alternate, using one for a short time and then the other. Feed your greens at noon, or twice a day if convenient, and give a hard grain mixture an hour before sunset. These are the three items in the ration of every properly fed hen: dry mash all day; green feed at least once during the day; grain mixture at night. To stimulate the appetite of your hens it would be well to add to this for a time a moist mash made by mixing

the dry mash with sour milk. Semi-solid buttermilk is used by many poultrymen for this purpose. Feed this moist mash early in the afternoon, or, if you prefer, about ten a. m., just what the birds will clean up in ten or 15 minutes. This is a great appetizer and is used by many experts during the heavy laying season. The grain mixture should consist of two grains, one of which should be wheat. If you want your hens to do their best.

CALIFORNIA FARM BUREAU EGG LAYING CONTEST

During the past week only one change took place in the relative position of the leading pens. The Enterprise Ranch of Chino nosed Mr. Neef of Santa Cruz out of fourth place with a lead of one point. Production during the last few days came down to 32 per cent, as many of the high individuals are now dropping out.

Standing of high pens to date: Bellows Bros., 2,019; D. B. Walls, 1,952; S. L. Gibson, 1,942; Enterprise Ranch, 1,918; W. J. Neef, 1,917; R. C. Gibson, 1,903; B. F. Rose, 1,877; G. G. Barker, 1,868; Warren Wood, 1,829.

MOTOR USEFUL BETWEEN ROWS

By N. C. Wilson

The motor cultivator used to be called the "missing link" in power farming, but it has arrived very definitely on California farms.

Crops planted in rows cover over 40 per cent of the total crop area of the United States. In 1919 these rowed crops represented over 50 per cent of the total crop value. The importance of rowed crops in American agriculture, shown by these figures, is convincing in itself that the future of

the motor cultivator in this country is great. Possibilities for the general use of this machine are increasing rapidly.

What does it offer from the farmer's standpoint? First, there is a great deal of time saved in cultivating rowed crops. It is possible for one man with a two row machine to cultivate from ten to 25 acres in ten hours, depending upon the condition of the crop. Speed can be increased according to the height of the plant. When the plants are small the rate of travel is necessarily slow. The steady motion of the motor cultivator and the resulting good work is a great advantage. Weather does not affect the implement, so that the farmer can do fast work when it is most necessary.

Other uses for the motor cultivator besides that of cultivating rowed crops make it all the more indispensable. It will pull soil preparation machines such as the disk and the harrow; drill grain; plant rowed crops; mow hay; cut grain; pull the hay rake, tedder and loader; operate belt driven machines that do not require more than 12 horsepower. Even this extensive list does not cover the great field of possibilities for general work on the farm which this prime mover is fast realizing.

POSSIBLY HE HAD

As I was passing a yard where some children were playing I saw a little fellow fall from a high porch rail. He did not move for a minute so I ran to his assistance, but when I reached him he jumped up on his feet apparently unhurt.

"Why, my dear little boy," I said, "I felt sure you must be hurt. I am sure I should have been had I had such a bad fall."

"Oh, but you see," he said in explanation. "I've probably had lots more practice in falling than you."—Exchange.

Now's the Time to Cultivate with Hercules Farm Dynamite

You probably know that the best way to plant trees is to blast the holes. But you must not stop there if you expect 100 per cent results.

After the third or fourth year the soil around your young trees should be broken up below the level reached by cultivation. You can do this by blasting four holes around each tree (at a distance of from 6 to 8 feet from the trunk) with

HERCULES FARM DYNAMITE

And now is the time to do this work for in the fall the ground is hard and dry—in prime condition for blasting. After blasting, fill the holes with organic matter and see how the trees will grow.

There are a great many other things you can do with the help of dynamite. You can blast ditches, clear your land, subsoil, do scores of other things with explosives if you know how.

And you can learn how by reading "Progressive Cultivation".

This book will be sent to you free of charge if you will sign the attached coupon and mail it to the Hercules Powder Co..

Hercules Farm Dynamite is for sale by leading Hardware and Implement Dealers.

60 H. P. Holt Caterpillar Tractor \$2,000 See it at 922 W. 6th St., L. A. Calif.

towns of Riverside County, but there were strings of birds from Oakland, San Francisco, San Diego and Santa Barbara.

As at former show, bantams were the largest class, some 200 birds being shown. Such an exhibition of bantams is exceptional, but it loses part of its significance when we consider that nine-tenths of the birds were the property of half a dozen exhibitors. It is evident, however, that the number of breeders of these beautiful pets is increasing and that there is a very general interest in their breeding and care.

Dark Cornish, Rhode Island Reds, Anconas, White Wyandottes and Barred Rocks were the leading breeds after bantams, and there was a good sprinkling of Rhode Island Whites, Buff and White Rocks, Buff Orpingtons, Black Langshans, Black Minorcas and Light Brahmas. Brown Leghorns, which are comparatively rare in California shows, were a good class and were welcomed by many who are sorry to see this beautiful and useful breed falling behind in the race for popularity. Sicilian Buttercups, Campines and Houdans were small classes and the few breeders of Andalusians had their birds out in force. Next to bantams, probably more attention was attracted by "White Alley," where the White Wyandottes, White Rocks and Rhode Island Whites preened themselves. Everybody loves a white bird, and the fluffy pullets and hens of these breeds were, points aside, the belles of the ball. There were some fine turkeys from the San Diego district and an interesting array of ducks, geese and guineas from Compton and other towns. Several unusual varieties of Pit Games were shown and Partridge Orpingtons were a beautiful class, though few in number.

Veterinary

Sick Cow

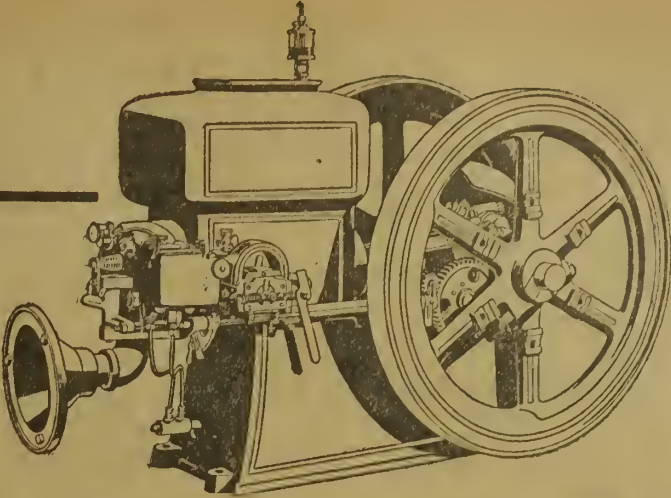

A few weeks ago my cow began losing flesh and ceased almost entirely to give milk. Prior to that she had been in good condition. She now eats practically nothing, is very weak and moans and bellows frequently. Think trouble due to drinking from hog wallow which has since been fenced off. Was tb tested in April and did not react. Treated her at one time for scours, which made her slightly better.—Subscriber, Bakersfield.

The trouble you mention could easily be caused by indigestion and going off feed. It sometimes happens that a cow can be thrown off feed to such an extent that she will fail to give any milk at all. Probably the water from the hog wallow was responsible. I would suggest that you give her a drench of a quart of raw linseed oil. This might be repeated the second day if felt desirable. The cow should then receive only good, clean water and good feed. Give her soft bran mash with alfalfa hay and good ensilage in rather small quantities to start on. The feed should gradually be increased with a little rolled barley and some dried beet pulp as the condition is improved.—G. E. G.

Rheumatism

Cow due to freshen with her second calf in three weeks is so stiff in her front quarters she can hardly walk. She eats well. I have been feeding her alfalfa and barley hay.—Subscriber.

Probably rheumatism. I would suggest that you keep her in a good dry place and provide comfortable stall or shed at night where she will be protected from cold winds. One of the best treatments I can suggest is to give a laxative, the best one probably being a quart of raw linseed oil, given as a drench. Drugs may be given, but I do not feel it desirable to recommend them except under order of a veterinarian who would administer them, because with these drugs there is danger of depressing the heart. I believe the above treatment will get results and is much safer. You should then continue to feed rather laxative feed, such as bran mash containing some ground or rolled barley. Beet pulp is also good. Good ensilage would also be desirable. The above feeds could be given with alfalfa hay. I do not believe that barley hay is to be recommended where the other feeds are available.—G. E. G.

ONLY A DOG

Friend of mine, pal of mine, faithful and true,
Grateful for all the small things that I do;
Ready to jump at the wave of my hand,
I'm never afraid you won't understand.

If fortune and friends have proven unkind
You still are faithful, you don't seem to mind;
Whether famously pedigreed or common
outcast,
Tho' only a dog—a true friend to the last.

When sad or discouraged or burdened
with care,
I look in your eyes—there's faith for me
there,
And tho' you can't talk, you bring
courage to me,
For to you I am all that I'm longing to be.

Only a dog—yet where can you find
A friend who will "stick" when the world
is unkind,
Who will love you and guard you and
give his last breath
To shield you if need be even to death.

Who will ask in return a kind word or a
smile,
A caress of the hand just once in a while,
If there's aught to forgive it's all in the
past,
And tho' only a dog, true friend to the
last.
—Mrs. A. Rice.

ALL ABOARD FOR THE FURNI-
TURE ISLANDS

(Continued from last week.)

The kitten pined her crimson skirt up around her waist and went over to the fire. She bent down with a holder to get the rack, and out of the ashes rolled a big red coal. Before the twins knew what was happening, Mewlinda was holding up her white petticoat and weeping bitterly. There was a scorched hole in the embroidery.

"Oh, my goodness gracious!" screamed Mrs. Cat. "Your best white petticoat! Careless thing!"

She was so angry that the twins backed over to the door.

"You shan't have another drop to drink, Mewlinda, until your best petticoat's mended with silk, so get busy right away."

Mewlinda, still sobbing, got a little spool of white silk and a needle from an apple pincushion on the bureau, and sat down before the fire.

"Why does everything happen at once?" fussed Mrs. Cat. "Here it is two o'clock and I promised to be at the Mousers' Club at two."

She pinned on a hat with a long green feather and nodded her head at the twins.

"Goodbye, children. And, Mewlinda, don't you stir from the house until that skirt is mended."

Mrs. Cat looked so fierce that Janie and Jennie were very glad to see her go. They went over to the kitten, who was weeping harder than ever.

"Oh, dear! How can mother be so cruel! She knew what I wanted to do this afternoon and it will be too late after this is mended."

She stuck the needle into the mouse skin rug on which she was sitting and cried until her small paws and her face were wringing wet.

The twins couldn't understand why she was so unhappy, but finally Mewlinda looked up and began to tell them.

"You see, Puss in Boots and I have known each other since we were very small. He is living a long way from here now and this very afternoon I was to meet him at the landing place. He has several things to show me, especially a new picture of himself done by the court artist. Oh, dear! And I shall miss him."

"Why?" asked Jennie, puzzled. "It won't take long to mend that hole."

Mewlinda opened her eyes wide.

"Not long! It is plain that you do not know much about sewing. First I'd have to cut all my nails so as not to tear the cloth. Then it takes ever so long to thread the needle, and so much longer to sew that it will be dark before I have finished."

The twins could not help laughing. Jennie picked up the needle and in ten minutes she had cut off the scorched edges and put on a little patch so neat that Mewlinda purred loudly and kissed them both.

"You dear things! Now I must hurry."

The little girls almost expected to see her powder her nose, but she only brushed down her fur, unpinned her dress and put on her white gloves. Then she got out the dearest hood of white lace with rosy bows, and when

it was tied under her chin she held the door open for the twins.

"Will you wait her for me?" asked Mewlinda.

The twins looked over toward Bureau Island. The sun was shining on it and they fancied that they could see a sparkle which might be from those silvery pinnacles Auntie Bee had shown at the bottom of the bureau. As they gazed over the lake they saw Mr. Bote swimming toward the landing place just across from where he had left them.

"Goodbye, Mewlinda," said Jennie, "and thank you for being so kind to us. I think we'll go over to Bureau Island with Mr. Bote."

But the kitten was not even listening. She was peeping around the willows toward the place where Puss in Boots was to land. There was a flash of red on the water and Mewlinda cried, "There he is!" She ran down the path without even saying goodbye and though the twins would have loved to see Puss in Boots, they knew it would not be polite to follow. So hand in hand they turned the other way and ran down to the edge of the island where Mr. Bote was waiting.

He seemed to be expecting them and the little seats were already unfolded.

"Had dinner?" he asked.

"We had — fish and — milk," answered Janie uncertainly for she didn't know whether Mr. Bote would think that was dinner or not.

He glided into the water and the twins tucked their feet up on the rods beneath their seats.

"O, Mrs. Cat always does live high," grumbled Mr. Bote. "It's all I can do to buy fish for the family with rent so high and everything—to say nothing of milk."

The twins wondered what it could be that he rented but he looked so very gloomy that they were afraid to ask any questions. Jennie had just whispered to her sister, "Do you suppose his wife got home from the convention?" when there was a splashing behind them and there were the three sea lion children.

Each one wore a little round cap between its ears, held on by an elastic band and each one wore a shirred ribbon collar. Ruby's cap and collar were green, Angelina's were purple and Rex's were yellow. They looked so funny that Janie giggled and the big sea lion turned his head.

"Great Jumping Jupiter!" said he, looking almost ready to cry. "If here aren't those children again. And all in their best clothes; their mother'll blame me of course. Rex, Ruby, Angelina—go home! Take off all your clothes and finish hanging up the washing as I told you to."

This sounded so very ridiculous to the twins that they were afraid they would have to laugh aloud. With their hands to their mouths they turned and watched the little sea lions. It evidently took their mother to make them mind for though Ruby and Angelina slowed up a little and looked somewhat ashamed they did not start for home; as for Rex, he immediately began to splash water over the twins.

Their father sighed and turned back toward Bureau Island.

"Can't do a thing with 'em—mother's never coming home I guess—better hire a couple of policemen to take care of 'em."

Rex had quit splashing and was back fighting with his sisters about something. The twins could hear them all squealing, but Mr. Bote was just drawing up to Bureau Island and they looked eagerly about as they jumped down.

The twins had not gone far when they came to a beautiful wood. They were very glad to see it, for even at the edge there were all kinds of fruit trees. Janie picked a great many pears, but Jennie thought nothing was better than apples, so she sat down under an apple tree and began to eat.

"This is better than fish, isn't it?" asked Janie, coming over to the apple tree.

"I never was so hungry in my life," said Jennie, and so the twins sat there for a great many minutes, nibbling away and laughing whenever they thought of Mr. Bote.

The Cultivator
Patterns

BE SURE TO SEND SIZE

3363. Child's "Slumber" Garment.—Cut in 5 sizes: 6 months, 1 year, 2, 4 and 6 years. A 2-year size will require 2½ yards of 27 inch material. Price 10 cents.

However, when Jennie reached behind her to get an apple that had rolled away, she felt something soft and furry. She gave such a start that both she and Janie fell over backward, but when they looked around there was nothing to be seen except the red cheeked fruit. It had a hole gnawed in one side.

What could have done it? They knew the answer in just about half a minute, for hopping around the tree came a rabbit. She had on a black and white checked dress and a little white cap, and looked very motherly. "How do you do, ladies?" she bowed. "I wish I were as tall as you, for then I could pick some apples for my babies."

The twins felt flattered to be called ladies, and both of them arose and began to pick the very best apples hanging low on the tree. They soon had all they could carry, and Mrs. Hare's little nose was quivering with joy.

"Come with me," she called, hopping around the tree. "I'll show you my nest."

It was the coziest kind of a nest built of grass and lined with fur, and in it lay five tiny hares. They wriggled their noses at the apples and did not even look at the twins.

"Oh, you darlings!" cried Janie, patting the nearest one, which was already nibbling away. "See, Janie—there are black spots on the tips of their ears, and what soft brown coats!"

"Their coats will be much prettier next winter," said Mrs. Hare proudly. "When the cold weather comes we all change from brown to white. You ladies wouldn't be able to tell us from the snow."

"I wish you could go down the hill with us, Mrs. Hare," said Janie. "Mr. Bote said there was a wonderful palace down there. Have you seen it?"

Now when Janie asked this question Mrs. Hare was sitting there in her little checked dress, busily eating an apple, and all the furry babies were sitting up and eating, too. Instead of answering, Mrs. Hare made a funny sound, and in a second all the babies were out of the nest and the whole Hare family had disappeared in the underbrush.

"For goodness sake!" exclaimed the twins together, looking around to be sure they weren't mistaken.

"Now what happened?" asked Janie. "I didn't know the little bunnies could even walk."

For a long time the twins ran about between the trees, searching for Mrs. Hare and her family, but there wasn't a trace of them. The little girls found that the wood was on a hill, for when they came to the edge of it, what should they see far down at the bottom of the slope but the glittering palace.

"We won't wait for the bunnies," called Jennie excitedly. "They must have gotten angry about something. Isn't it a perfectly beautiful palace? It looks just like the one in our Cinderella book—but of course it couldn't be."

Janie did not answer. She was not looking at the palace, but at something which had come out from between the fruit trees—a red fawn who stood gazing at the twins with great brown eyes. Janie reached out her hand and the fawn, instead of running away, came up and put his soft nose into her palm.

Jennie, too, forgot all about the palace. The three seated themselves in a little patch of white violets which smelled like weddings and everything nice, and the fawn began to talk softly.

He said he knew Mrs. Hare very well, and there were some fine families of squirrels in the trees too, but they were saucy. He never passed through the wood but one of them let an apple or a peach fall bing! on his head.

"My father is there watching us," said the fawn, nodding his head toward the thicket. "He doesn't like little girls as well as I do."

The twins were rather frightened when they saw the hart steadily gazing at them. His eyes were as lovely as the fawn's, but his branching horns somehow looked very fierce.

(Continued next week.)

Don't borrow trouble with the intention of returning it with interest.

THE HALLOWE'EN PARTY

HALLOWE'EN frolic is always popular with young folks, whose festival it really is. Nor does it require any great expenditure of labor or money to arrange for such a party; for the decorations may be had for the taking from nature's own conservatories, and the refreshments, if custom and tradition are regarded, should comprise only a few simple viands, nuts, apples, popcorn, ginger cakes and fresh sweet cider.

Fill the rooms with decorations of autumn foliage or berries. In many sections our "holly" berries are already brilliantly colored as are the cascara or "wild coffee." Then some of the grape vines take on wonderful autumn tints. Corn stalks, feterita, any of the sorghums make beautiful and effective wall coverings, or large rooms can be partitioned off by screens of these stalks. A fortune teller's booth, for instance, might be built of them in a corner.

Jack o' lanterns, of course, are the characteristic decoration for Halloween, real ones made from pumpkins of various sizes with candles inside. Then it is as well to have some of orange or green paper over brighter lights to give sufficient illumination. Carrots and turnips may be easily turned into fascinating candlesticks.

The entertainment feature, too, is easily arranged, for certain sports from time out of mind have been inseparably connected with the festival. Modern games would be entirely out of keeping with the occasion.

Such games as ducking for apples, trying fortunes with apple parings and apple seeds, testing fate by means of "the three higgles," popping chestnuts, and others equally familiar to everyone should be played. If there is someone at hand who can act the part cleverly, a fortune teller will contribute immensely to the evening's fun.

As nuts always have played an important part in Halloween festivities, a very simple and amusing game to play—amusing for old and young alike—is a nut hunt. Have four kinds of nuts—walnuts, almonds, pecans and peanuts, for instance. Assign to each sort a different value according as they are plentiful or scarce in your supply. The walnuts might rank ten, almonds 15, pecans 20 and peanuts five. Before you hide the nuts, carefully crack several of the walnuts, removing meats and taking care not to break the halves of the shells. Insert various little emblems in place of the meats—a ring for marriage, a thimble for no marriage, a bean for happiness, a coin for wealth and a key for success. Now carefully glue the halves of the walnuts together and hide them with the rest of the nuts. A prize of some sort should be offered for the one who scores the highest—not in single nuts, but in total counts on all the nuts found.

When sending out invitations a jolly plan is to ask the invited guests to wear any disguise they choose, besides a huge, enveloping sheet and a pillowcase for the head covering. As they arrive station at the door to receive the guests a tall boy and girl, each dressed as queerly as possible. They may hand each guest a card, on which is printed a number. Number the cards just as the guests arrive, in order.

A very dark room, with a huge "pumpkin head" ghost in the center to add to the uncanny effect of the whole, is a great source of amusement. The guests are supposed to sit in absolute silence that their identity may remain a secret until the arrival of the last guest. Then very suddenly the lights are popped on and immediately the ushers commence their task of trying to discover the identity of each separate guest. If they succeed the unfortunate's number is jotted down on a tablet and the unlucky ones pay their just forfeit.

For refreshments serve nuts and good eating apples, ginger cakes, popcorn balls and sweet cider. Serve these in the simplest manner possible, dispensing on this occasion with all modern furbelows. The refreshments might be placed upon a table and the guests allowed to help themselves.

Or, if one wishes to serve a supper to a small party, here is a suggestion: Sandwiches of brown bread and apple and nut salad in apple cases; coffee; sweet cider punch and chocolate gin-

ger cookies comprise the list.

More elaborate refreshments could be served of stewed oysters, bread and butter sandwiches, coffee, ice cream, cakes and candies, but the time honored doughnuts and cider and pumpkin pies are more popular than anything else.

Whether or not all of the traditions are kept alive, it is well to make every innocent festival the means of drawing the boys and girls closer to the life of the home and convincing them that they need not go somewhere else for pure and unadulterated fun.

Vote "Yes" on Number 2

Prohibition Enforcement Act

Whatever our previous stand upon the question, Prohibition is now a part of the Constitution of the United States.

The safety of our nation demands that our National Constitution be strictly enforced. As long as Prohibition is in the Constitution, Prohibition must be enforced or California must become a lawless and law-breaking state.

The National Constitution has directed California and all other states to pass a Prohibition Enforcement Act. Most of the states have done this, with the result that they are almost entirely free from the scandals of illegal liquor traffic such as are now stirring California.

The Federal Government with its scanty supply of peace officers and courts cannot enforce the law and constitution without the help of the State Enforcement law, numbered "2" on Tuesday's ballot.

The question for California is "law or lawlessness." To that question a law-respecting citizen can give only one answer.

HAY

Alfalfa Growers of California under
date of October 26:
No. 1 Dairy Alfalfa.....27.00
Standard Dairy.....23.00
Stock Hay.....22.00

Under date of October 22 A. W. Scott &
Co. says:

Receipts past week 1,347 tons. The San
Francisco hay market is perhaps the ex-
ception in produce markets, in that it has
remained almost stable throughout the
fluctuations of all other commodities and
with a steady although light demand has
maintained its average of prices. The
last week has shown a market stronger
and with prices advanced even with re-
ceipts somewhat heavier. Almost all
lines of hay have been selling in San
Francisco and throughout the country
tributary to this city at from \$1 to \$2 per
ton better than during the preceding
weeks. Possibly this is caused by the
stronger reaction in the grain markets
although in all probability local con-
ditions have more to do with this increase.
There seems to be a little more activity
in buying although consumers will not
yet purchase anything in storage. Farm-
ers have apparently been able to make
their financial arrangements and we have
not seen any indication of sacrificing their
hay in order to provide funds for pressing
necessity. Alfalfa is apparently strong-
est of all types of hay and although some
is being shipped in from Nevada alfalfa
raisers in that state have been holding
at prices that do not conflict seriously
with the selling of the California crops
at prices quoted.

We quote today wholesale prices in
carload lots as appear from dealers'
transfers upon the hay market in San
Francisco (for prices to consumers, charge
of cartage, commission and handling ex-
penses must be added according to con-
ditions):

Per Ton
Wheat hay, fancy.....23.00@29.00
Wheat hay (light 5-wire
bales) fair to No. 1.....24.00@27.00
Tame oat hay, fair to choice.....24.00@27.00
Wild oat hay18.00@20.00
Barley hay17.00@20.00
Alfalfa hay22.00@25.00

Citrus Markets

Los Angeles, October 27, 1920.

The Valencia supply is practically
cleaned up. F. o. b. shipments have ended
and but few cars will remain to go after
November 1. Central California ship-
ments will begin early in November as
the crop is coloring earlier than usual.
Some sales of Naveis are reported in the
Lindsay-Porterville district at four cents
per pound on tree.

The lemon situation is manifesting far
more life. A fighting chance is now given
to the lemon growers by the great reduc-
tion in imports.

Shipments

Shipment of oranges to date since No-
vember 1, 1919, from Southern California,
29,909; lemons, 8,532; total, 38,441. To
same date last season: Oranges, 34,941;
lemons, 9,645; total, 44,586. From Central

California to date this season: Oranges,
5,375; lemons, 288; total, 5,663. To same
date last season: Oranges, 3,714; lem-
ons, 251; total, 3,965. Northern California
this season: Oranges, 261; lemons, 23;
total, 284. To same date last season:
Oranges, 244; lemons, 2; total, 246.

Cal.

The farm bureau center of Alameda
County features its regular meeting
with a luncheon and a social hour.

[POLITICAL ADVERTISEMENT]

To the Farmers of California:

We most emphatically and unreservedly urge you to vote "NO," Novem-
ber 2nd on the Initiative Amendment No. 4 on the ballot for the following
reasons:

It raises the percentage of required signatures from 8 to 25 per cent on
any initiative measure concerning the assessment or collection of taxes.

This number is absolutely prohibitive—calling for a quarter of a million
signatures—and would kill the Initiative in its most important function of
government—Taxation.

It is not necessary to adopt this measure and kill the Initiative in order to
defeat single tax as the record of the votes shows that the people of California
are overwhelmingly opposed to single tax.

If this amendment should carry, no basic taxation measure could here-
after be initiated by the people but all such measures would have to emanate
from the legislature, and as all such measures require a constitutional amend-
ment and as constitutional amendments require a two-thirds vote of both
houses of the Legislature, and as 14 members are a little more than one-third
of the Senate, it thus follows that 14 members of the Senate of California could
prevent the submission of any measure concerning the assessment or collec-
tion of taxes, even though all the members of the Assembly, 80 in number, the
26 remaining members of the Senate, the Governor, and all of the rest of the
voters of the state, wanted it.

Save democracy by voting "NO" on Amendment Number Four.

C. C. Young, Lieutenant-Governor.
Chester H. Rowell, Regent of the Uni-
versity of California.
Irving Martin, Editor of the Stockton
Record.
E. A. Dickson, Regent of the University
of California.
Rudolph Spreckels, Capitalist.
S. C. Evans, State Senator from River-
side.
E. P. Clark, Pres. State Board of Educa-
tion, and Editor Riverside Press.

Mrs. Frank A. Gibson, Member Immi-
gration and Housing Commission.
Mrs. J. O. Colwell, Director Los Angeles
Co. Farm Bureau.
Mrs. H. H. Koons, Member Board of Di-
rectors, Orange Co. Walnut Asso., and
California Walnut Asso.
E. O. Edgerton, President State Railroad
Commission.
Will C. Wood, State Superintendent of
Schools.
Ben Allen, Editor The Sacramento Union.

Amendment No. 4 on the ballot is opposed by Governor William D.
Stephens, Senator Hiram W. Johnson, Senator James D. Phelan, President
Barrows of the University of California, President Wilbur of Stanford Uni-
versity, and the other progressive citizens of California, who are laboring in
the cause of Democracy.

Vote "No" on Number 4

**It may work
out with the
PEN**

**Does it work
out with the
HEN**

Perhaps you figure it this way: "Why should I buy mixed feed? I want to know what my hens eat. So, why not buy the separate ingredients and mix them myself? In this way I know just what goes into the mash. And I save the mixing charges, too!"

We'll admit—it sounds reasonable enough. But—at the end of the year when you scale up your profit-figures, how does it work out? Have you ever compared the results you get from hand-mixed feeds with the results other poultrymen are getting from a uniform, top-grade feed like SURELAY?

After all, the thing that counts is not how much you *think* you save by mixing your own feed—but what the hens think of the feed you give them and what they do with it. Egg-production is the test that tells! Egg-production is what makes many a feeder ask himself: "Just how cheap *are* cheap feeds?"

Seasoned poultrymen who have fussed with this feeding question will tell you that cheap feeds lessen the profits of every hen in the flock. Moreover,

our large scale production enables us to manufacture and *sell* the finished feed lower than the average feeder can *buy* the ingredients—to say nothing of the cost and trouble of mixing.

Nor, for a moment, should you overlook this: no matter how careful you are—no matter what methods you use—you'll have to own up that hand-mixed feed is guesswork at the very best. Whereas, when you feed SURELAY, you *know* what you're feeding. You know that every batch contains exactly the same uniform proportion of food-values. Our daily laboratory tests (an advantage the individual feeder cannot have) take good care of that.

If you want to see for yourself why we, as manufacturers and millers, are in a position to mix a uniform quality-feed cheaper and better and quicker than you can—send for the new edition of our booklet, "Makes Hens Happy." Full of practical hints and profit-pointers! It is yours for the asking—simply fill in the coupon and mail today!

Impressive Figures as to Food Production

BANKERS are giving more sympathetic consideration to the problems of the farmer. This is perhaps not because of any philanthropic motive but purely as a business proposition. More crops, more money; more money, more business for bankers.

For instance, the recent cotton situation in California called for relief in face of a flat market and insufficient funds in the hands of the producers to harvest and gin the crop. The policy which the federal reserve had been following for the past few weeks offered little encouragement. Finally, however, the local banks, together with the larger financial institutions of Los Angeles, took the matter up, and now funds are being advanced as rapidly as the cotton growers may need them.

This brings to light the fact that one of California's larger institutions, the First National Bank of Los Angeles, has installed a new department having to do with California agriculture, especially with a canvass to determine as to the past and present year's output; likewise, so far as possible the future scope of agricultural practices will be looked into.

Some figures indicating the size of the job of estimating California agriculture appear in the center of this page. Accompanying this table is the following statement:

"The question of the financing of crop movements in the West, particularly in California, is of supreme importance, and it has long been the hope

of Western bankers to work out some proper method of equitable commodity financing. In order to obtain the necessary data for the proper consideration of this matter, in so far as California is concerned, we have attempted to make a survey of the actual production of the state during 1920 and to draw comparisons for that production with the years of 1919 and 1918.

"Working through the various banks and railroads of the state, and due particularly to the kindness of E. E. Kaufman, field agent of the

bureau of crop estimates of the United States department of agriculture, there has been compiled a rather complete report of California crop conditions for 1918 and 1919 and also crop estimate for the year ending December 31, 1920, without the value of the crops in the field for the present year, although total values for 1918

Crop	Production 1918		Production 1919		Forecast 1920
	Bushels	Value	Bushels	Value	Bushels
Corn	2,975,000	\$5,742,000	2,871,000	\$5,139,000	3,022,000

Cantaloupes					12,500
Cantaloupes & Vegetables		55,000		16,200,000	

and 1919 are readily obtainable. The total values for 1918 and 1919 are for the field value."

How to get the money to handle this immense production is a problem which concerns farmer, shipper, merchant and banker. The Lindsay National Bank in a recent statement says that but 7.2 per cent of the nation's money is in banks. As individuals we are carrying around \$20.75 in our pockets. One dollar deposited in a bank is turned back into the channels of trade and passes through 20 hands during the year; the average dollar in the pocket of the public has infinitely smaller circulation. If this ready cash could be jarred loose from the pockets of the people one long step would be taken in the problem of moving California's great food crop.

The K Hand Stump Puller

Gives Your Hand 96,000

Pounds of Power

Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable! you *alone* can pull with my "K" Hand Power Stump Puller--without digging and without the expense of teams and powder. We guarantee it. We refer you to U.S. Gov. officials. We give highest banking references. If you have stump land, the cheapest way of clearing it is with the

HAND POWER

Stump Puller

How the "K" Pulls Biggest Stumps A Mechanical Wonder

The "K" works on the leverage principle Made of finest steel—guaranteed of the ordinary lifting jack, except that against breakage. Weighs only 171 lbs.—the power is applied on a cog-wheel in-easily carried or hauled about on its own stand of a standard. 100 lbs. push on the truck wheels. Has two speeds—60 feet lever develops a 48-ton pull on the stump—per foot per minute for hauling in cable all an inch steel cable will hold. One or for small stumps—slow speed for man operates it alone—no teams heavy pulls. Works equally well on hillsides and marshes where horses cannot work.

Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes: "The stump puller is a wonder." Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

Special Offer We are making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write us today for full information and for free book on Land Clearing and about our Wonderful Drag Saw.

One Dollar Yearly

Planning and Planting a Vineyard

By Fred K. Howard

DOES fruit production involve only the questions of cultivation, harvesting and selling the crop? In a general way these three operations do cover commercial fruit production, but there is a world of detail which must be considered by the grower when producing and marketing fruit. It is the successful working out of these details or the lack of attention to them which determines whether or not the undertaking is to be a success or a failure.

Thanks to the splendid cooperative spirit of fruit growers in California, marketing associations have been successfully organized. These cooperative associations have stabilized the prices which the grower receives for his fruit and they are solving the old problem of standardized products. The fruit grower of today and of the future can, therefore, devote all of his energies to the production of more fruit per acre. He is enabled to spend a larger share of his time in the study of methods which will improve the quality of his product. Today and in the future the "velvet" in the fruit business will go to the man who, by reason of this study and the application of scientific principles, is enabled to increase his production above the average in quantity or in quality. The success of a fruit grower in the future will be the measure of his ability to produce good fruit, and not his ability to "guess" whether to sell or to hold, that he may obtain a better price than his neighbor. Speculation has been eliminated in the marketing of the crop and it is gradually being eliminated from the question of production.

It is for this reason that growers are paying particular attention to all the factors which may influence the producing ability of the new acreage they are planning to plant. Thousands of acres of land in the San Joaquin Valley will be planted to vines this year.

Many growers are selling already improved and producing places and are concentrating their energy and experience on the proper development of new acreage. It is within reason to expect that much of the new acreage will therefore break all previous production records when it reaches the bearing age. On the other hand, many people are planning to develop new vineyards who know comparatively little of this branch of farming, so many partial as well as complete failures will be inevitable.

What will the experienced grower do to insure the success of this effort? This is a question that is being asked by many who may lack in experience or training. The very first essential in producing good grapes is good land. Good land is not determined by the price one is asked to pay. Good land is not always indicated by what one is able to see on the surface. A layer or stratum of hardpan may prevent proper root penetration. It may prevent proper drainage. In fact, such land, unless it can

be successfully blasted, may prove to be entirely unfit for the production of grapes. Often layers of clay a foot or so beneath the surface will prove as detrimental to the undertaking as will hardpan. A soil auger, a post hole digger, or a shovel should be used to determine the underground conditions before any land is purchased, no matter what the price may be. Don't stop when one hole has

been dug; dig a dozen on different parts of the place. The presence of alkali has much to do with the quality of land and is very often the deciding factor between success and failure. Alkali is often very hard to detect, especially during the rainy season, and if there is any question, or even a slight suspicion of its presence, samples of the soil should be analyzed by a competent chemist. Remember, poor land is expensive at any price. It is far

wiser to buy a small amount of good land at a high price than to spend less per acre for poor land. It takes almost as much time and money to cultivate the spots on which nothing will grow or on which, if vines do grow, poor crops are produced, as it does to care for the high producing parts of the vineyard.

Look carefully into the water supply. If you are on a ditch are you

A Young Thompson Seedless Vineyard

Production like this is possible only on good land where the grower has paid careful attention to every detail which tends to improve quantity and quality. Such vineyards are now the exception; it is possible to make them the rule.

sure to get plenty of water when you need it? Consult other growers on the same ditch and learn as much as you can about the management, assessments, quantity available, the time of year the ditch goes dry, and other points of importance. It is possible that you will discover from these inquiries that it will be necessary to have a pumping plant in addition to the ditch water. The expense of a pumping plant, especially if its necessity is unexpected, might seriously

cripple or exhaust available resources. If irrigation is to be from wells, the distance to water, the probable lift and the availability of power are factors which should be carefully considered. The water lift alone requires careful study, as an excessive lift may make the cost of an acre-inch of water so great as to be almost prohibitive. Excessive electric power rates in some districts may also work a hardship. By all means carefully investigate the possible supply of water and try to determine whether it has any indication of diminishing due to continued or excessive demands by present and future development in the district. Have the water of wells in the district analyzed for alkali. You cannot afford to pump alkali salts on land you have paid real money for, if you expect to make a living from that land. Remember that you are in fact in competition with every other grape grower. You must at least produce an average crop on every acre of the land you are planning to plant or you will in time be forced out of business. If you can produce an average crop or better for a term of years, then and only then do you stand a chance of making a success in the production of fruit.

Water and labor are two of the most important factors when considering the cost of production. When planning the vineyard careful thought should be given to any idea which, when put into operation, will tend to conserve either or both. Probably no other factor is so important in this connection as properly leveled land. The even distribution of water is very essential when producing good crops, and no matter how much labor is used it is practically impossible to get an even distribution of water unless the land is level. Leveling does not mean "guessing" that some dirt from one place should be moved to another. Guesswork or speculation of this sort should be discouraged wherever possible. An engineer or someone familiar with the use of a level should set grade stakes, planning the work so a minimum amount of dirt is moved. At the same time the permanent irrigation ditches on the place should be planned and laid out.

Leveling should be done as early in the fall as possible to permit a good flood irrigation or the winter rains to settle the freshly moved dirt. Very often some finishing work will be needed, especially if large fills have been necessary.

Any amount of money spent in getting a good leveling job is justified, provided, of course, you get all you pay for. It will take only a season or so of handling water on uneven ground to spend more than the entire job of leveling would have cost. Poor production on high spots where it is hard to get the water and on low spots which get too much soon make a hole in the profits. Good land and proper leveling are the lessons that have been learned by growers in the older grape districts, and the prospective grower should profit by this experience.

Convention Week Program at Fresno

NEXT week will be one of inspiration for producers of California fruits and foods, for the producers of the state are all invited to gather at Fresno to discuss cultural, market and other economic questions. This is the old State Fruit Growers Convention, enlarged and elaborated until it has become far reaching. There will be the 53d state convention under direction of George H. Hecke, director of the state department of agriculture. State horticultural commissioners will also gather, discussing problems affecting quarantine, pest eradication, standardization and other interesting and helpful subjects. The nurserymen will also gather in tenth annual state convention at which nurserymen's problems and doubtless problems affecting the new Bud Selection Association will also be discussed. At

times all these bodies will unite in mass convention. The program is:

Tuesday, November 9—Convention opens at 9:30 a. m. with short address by president of chamber of commerce, followed by invocation, address of welcome by Mayor Toomey, response and annual address by Director Hecke. The remainder of the forenoon and the afternoon session will be given to discussion of "Our Present and Future Problems." This discussion has to do with various cooperative organizations. Addresses by: F. A. Seymour, Associated Raisin Co.; President Wilson, Peach and Fig Growers; W. E. Sprott, Fruit Growers Exchange; Manager Thorpe, Walnut Growers; President Pierce, Almond Growers; President Swett, Pear Growers; Secretary Dunlap, Prune and Apricot Growers; President Cutter, Fruit Exchange; Sales Manager Sieg, Fruit Distributors. President Roeding of the State Agricultural Society closes Tuesday afternoon program with discussion of Farmer and Fair.

(Continued on Page 602.)

Agricultural News Notes of the Pacific Coast

Northern California

The rice mill at Gridley has begun the season's work.

Willows, Glenn County, reports rice harvest very backyard.

The students at the University of California now number 9,670.

California is now producing \$18,000,000 annually in her poultry yards.

The Orange and Olive Exposition at Oroville opens on November 15.

One Colusa vineyardist has disposed of his second crop of Muscats at \$75 per ton.

California will receive \$181,003.13 as her share of national forest receipts for the past year.

Northern Sacramento mountain sections report heavy precipitation of snow during the recent rains.

The California Olive Association spent \$10,000 in bacteriological investigation of botulinus poisoning.

Members of the farm bureau of Eldorado County recently attended agricultural club convention at Davis.

The Pacific Rice Growers Association has set a minimum of \$3.08 for paddy rice at growers shipping point.

The state university is preparing a correspondence course on apricot culture which will be available about January 1.

Rice growers are now being offered less than half the price which prevailed a year ago. Few sales are being made.

Chico chamber of commerce sent a large delegation to attend the farm bureau meeting at the Durham Land Settlement.

California produces 96 per cent of the apricots grown in the United States is the statement of the University of California.

Director of Agriculture Extension Crocheron says that eight assistant farm advisers have been called for in as many counties.

Cattlemen of Arbuckle, Colusa County, were fined \$50 each for allowing their cattle to run at will over the mountains and foothills.

Large stocks of wool accumulated in Australia during the war are ready to be thrown on the market to still further depress the wool prices.

In a number of the sheep growing sections sheep have not been sheared this fall because of high prices of shearing and low prices of wool.

The Ehman Olive Plant at Oroville, said to be the largest in the world, will formally open on November 15, the day of the opening of the Orange and Olive Exposition.

The road running south of Willows is being repaired. This is across an alkali section where the base lacks sufficient thickness to hold up and went to pieces under heavy trucking.

There was an attendance of 432,467 at state university extension classes, lectures, moving picture entertainments, or enrolled in extension correspondence courses during the past year.

The matter of the riparian rights of towns along the lower Sacramento River and the suit to restrain rice growers of the upper river from taking out the waters for irrigation purposes is still before the courts. There are 310 defendants named in the suit instituted by the town of Antioch.

Central California

Twenty-two Japanese companies have filed articles of incorporation in Merced County during 1920.

Modesto, Stanislaus County, is rejoicing in the possession of a new bank, building, charter, and all.

The United States Indian agency at Greenwood, California, bought the first prize bull at the Tulare County fair.

The California Peach Growers have received about 20,000 tons of peaches this year, as against 27,000 tons in 1919.

Governor W. D. Stephens will attend the banquet of fruit growers to be held in Fresno on the evening of November 11.

Local fruit men estimate the present season's orange crop in the Fresno district to be about 350 cars, crops normal, quality good.

The second raisin allotment by the California Associated Raisin Company will be made some time in November and amount to about 25,000 tons.

In the packing houses of Fresno 3,500 tons of raisins are awaiting cars to carry them to ports and markets, a shortage of 100 cars at present.

A statement from Fresno is to the effect that figs will begin coming to the packing houses about November 15 and the crop will be about 10,000 tons.

Kern County farm bureau hog sales will be held in November at McFarland, 13; Bakersfield, 20. In December, Wasco, 4; McFarland, 11; Bakersfield, 18.

The 53d Fruit Growers and Farmers Convention will be held in Fresno, November 9-13; the nurserymen's convention will be held 8-13 in the same city.

Watsonville district, Santa Cruz County, has received nearly three inches of rain up to October 20, as against a mere trace at same date in 1919.

Turlock, Stanislaus County, reports much damage by recent rains to corn, beans and melons, but slight damage to cotton, and stock ranges greatly benefited.

The stemming of 1,000,000 pounds of Thompson Seedless raisins has begun at Turlock, Stanislaus County, no other variety being grown commercially in that section.

The farm bureau exchanges of three counties—Madera, Merced and Stanislaus—have organized a calf department and thereby received higher prices than ever before.

Kern County farm center meetings for November are: Delano, 8; Old River, 9; Wasco, 10; Rio Bravo, 11; Edison-Fairfax, 12; Mountain View, 15; Pond, 17; Inyokern, 18; Rosedale, 19.

The olive growers of Tulare County have pooled all stock remaining in their hands and will place it in the hands of a committee for immediate sale or to hold in salt solution for an improved market.

L. A. Nares of Fresno has been named vice-president of the National Highway Traffic Association, to represent California, Nevada, Oregon, Arizona, Washington, Utah, Colorado, Montana, Idaho, Wyoming and New Mexico.

Southern California

The Palo Verde Valley has seven cotton gins now in operation.

The Pasadena Flower Show will be held at 60 West Colorado Street, October 28, 29, 30.

Two long staple and two short staple cotton gins are running steadily at Brawley, Imperial County.

Riverside County is forming a co-operative marketing association to include every fruit center in the county.

The three prizes awarded Coachella Valley cotton at the Riverside fair all went to Henry Middleton of Thermal.

A Delicious apple at Yucaipa weighs 19 ounces and a Stayman Winesap over 20 ounces, in the 1920 crop records.

In three days, October 16-19, oil prospecting permits covering 10,000 acres were issued at the U. S. land office, El Centro.

More than 300 tons of honey have been produced in Orange County during 1920, the state exchange handling 236 tons.

Coachella Valley cotton growers anticipate better prices in the near future and are holding their crops in the warehouse.

Imperial Valley cotton growers have already imported 1,800 pickers from Mexico, and the number needed is estimated at 3,500.

Farm Adviser Neibelung of Riverside County will hold gopher exterminating demonstrations at various points during November.

Growers about Rialto, San Bernardino County, estimate the coming season's output of citrus fruits from that section at about 1,200 cars.

Walnut picking in the Lankershim district is nearly over, with reports of a good yield. The local packing house employs about 20 persons.

Ventura County reports the heaviest yields of Lima beans running from 42 to 45 sacks to the acre, both from the Ventura and Montalvo districts.

Mr. Spencer of Costa Mesa, formerly Harper, Orange County, reports most successful disposal of many of the products of his farm through way-side market.

The first of Imperial Valley's 1920 pomeios were delivered in Los Angeles by airplane, the journey consuming less than three hours from El Centro to Los Angeles.

Ventura County farmers are anticipating setting a fair agricultural wage for the next few months through calling together a committee of the largest growers from each section.

The lettuce acreage in Imperial Valley, as well as condition of the crops, is about the same as 1919, but a small cabbage worm has been playing havoc until a recent cold spell curbed its activities.

The Orange County farm bureau held an important citrus school, with orchard demonstrations, on the W. R. Ward ranch, Anaheim, October 27, 29. Some of the lectures will appear in the Cultivator.

The Orange Belt Honey Producers Cooperative Exchange held an important and interesting meeting at Riverside, November 1, including beemen from both Riverside and San Bernardino Counties.

The Coast and General

The 1920 Sultana raisin crop in Smyrna is 25 per cent less than that of 1919.

Stem end rot caused heavy losses this year to Southern states melon growers.

An immense prune dryer has been erected at Elberton, Whitman County, Washington.

The Tenth Annual Seed Show of Idaho will be held some time during January, 1921.

The 1920 bean crop was a reduction over that of 1919 in all states except Colorado.

Arizona orange picking began in the Salt River Valley October 15, also at a few minor outside points.

It is rumored that an orange grove at Florence Villa, Florida, sold for \$3,500 an acre, a record price for that state.

The total value of Arizona property according to the assessor's statements just issued for the year 1920, is \$844,455,682.

Under normal conditions there is no wool storage in New Zealand at this season, but now there are 412,000 bales in warehouses.

California produced 97,531,997 barrels of petroleum in 1918, according to a late report of the United States geological survey.

Some of Oregon's best Holsteins were recently sent to a cattle sale at Sacramento, one bull bringing \$3,300 and a cow \$1,025.

Land owners of Thief Valley, Oregon, are moving to secure through the federal reclamation service irrigation on a large tract of land of that valley. It is estimated that the project will cost around \$106 per acre.

Range conditions throughout Arizona are good with the exception of parts of Cochise County, where it has been quite dry. Cattle gathered up on the fall roundups which are now in progress are generally in good condition.

Seed of the pure bred Pima cotton from fields planted with rogued seed. It is expected, will be sufficient to plant 150,000 acres next season. Ginners that will distribute this seed are being urged to pro rate it if applications are received for more than this amount.

Merchants of Phoenix have set the last Thursday of each month as Suburban Day. On this day special bargains will be offered to farmers and people of the adjoining towns, as an inducement to traders from outside. The first of these days is to be held October 28.

D. Brabant, a cotton broker of Lille France, has been in the cotton growing districts of Arizona studying the long staple cotton industry. In this French town there are some famous mills which produce fine fabrics, for which it is necessary to use the highest grades of cotton.

A farmer of the Salt River Valley of Arizona has sent some Indian wheat seed to Dr. R. H. Forbes, formerly dean of the Arizona college of agriculture, now in Egypt. Dr. Forbes writes that he believes that this wild Arizona plant will do well on the north coast of Egypt and in Palestine.

WINTER, such as it is in California, is here and we find the various storage battery dealers and service stations with their respective sleeves rolled up for the busiest season in the history of the automotive game.

The pith of the situation is embodied in two very short words—poor gas. A certain amount of battery trouble is inevitable during the colder months but with the Golden State just shaking loose from an appalling shortage of gasoline which made necessary a lowering of quality in many localities the young men who manipulate the hydrometer seem justified in predicting a bumper crop of grief for motorists.

Especially care should be taken in starting trucks, tractors and passenger cars equipped with storage batteries on these cool, snappy mornings. There are a number of little tricks known to the man who understands his car that will help keep the battery in functioning condition while his thoughtless neighbor is held up waiting for the service wagon to arrive.

The Cultivator does not make a practice of naming specific products in its reading columns but will not hesitate to state that the "Armstrong Starter" is without an equal for the man who would save battery bills. If a person is feeling husky and equal to the occasion the first start of the day should be made with the good old fashioned crank of our forefathers. Should one be suffering with lumbago or otherwise indisposed the next best thing is to turn the motor over three or four times with the crank, break-

Boreas and Your Battery

By James De Camp

ing up the oil that has stiffened and congealed through the night, and then finish the job with the starter button.

When a piece of automotive equipment is run into the barn or garage for the night the motor should be speeded up and the choke pulled wide open as the current is switched off. This fills the combustion chambers with a vapor which condenses on the side walls during the night and makes starting easier. It seems puerile to state that a driver should throw the throttle wide open and pull the choke out to its fullest extent when making the first start of the day, yet you doubtless have noticed people playing a battery wrecking solo on the starter with the motor getting less gas than would drown a microbe. Women are especially prone to indulge in this expensive pastime and often cannot understand why a comparatively new battery loses its ambition and quits on the job. The battery is just like your gasoline tank. There is a certain amount of electrical energy stored within the battery cells and the more you remove the less will remain. When the supply is exhausted a recharge becomes necessary, and oftentimes further repairs.

Motors that become obstreperous because of low grade fuel or poor design of the manifold can often be helped by pouring hot water over the carburetor and even on the motor it-

self. This is a laborious but certain method of hastening vaporization and saving time. If after repeated efforts the motor does not start shift your suspicions from the carburetor and gas supply to some other part of the mechanism. Above all else do not saw blindly away with the starter hoping that the machine will change its mind and begin the day's work.

If the battery service station is near the regular free inspections should be taken advantage of religiously. Owners who live too far from town to have this convenience should own a hydrometer and do their own testing and filling with distilled water at stated intervals. If hydrometer readings show a continued decrease from the normal, 1.280, trouble is in the wind. Sometimes a readjustment of the generator or a long run will bring the battery back to par, but more often it is necessary to take the "juice box" to a service station for recharging.

Your battery man is anxious to give you satisfaction, and behind him stands the company that made and marketed your battery. Competition is so keen in the battery world that a dissatisfied user is a very undesirable party to have abroad. Consequently you may rest assured that you will be given all possible consideration and, if your guarantee has not

expired, all trouble not caused by your negligence will be cheerfully repaired.

The man who recharges your battery is qualified to advise you should new plates or insulation be necessary. Perhaps, after opening up your battery, he will recommend that you buy a new one. There is no "bunkum" about it, since a reliable battery man will show you your plates and insulators, thus permitting you to judge their condition for yourself.

A new battery is often cheaper than repairs, just as a capable tractor is a better investment than a rebuilt machine that will be in the shop two or three days out of the week. If your equipment is of the type that draws the ignition spark from a storage battery instead of a magneto, your truck, tractor or motor car will go only as long as the battery functions. Where the battery leaves off, lost time, service fees and towage bills begin. Remember this when the time comes to fill and test the battery and you are inclined to put the task off till tomorrow.

During prolonged periods of bad weather when equipment is laid up for four or five days at a stretch the motor should be started up in barn or garage and run at a moderate speed for ten or 15 minutes to keep the battery in trim. If a battery equipped motor is to be retired from service for several months or a season, be sure to take the battery to a service station for storage. If this is not done so that proper care will be given a new battery is inevitable when this piece of equipment is used again.

November in the Vegetable Garden

Northern California

By A. R. Gould

WELCOME rains in this section have been most encouraging and will act as a stimulus for the coming season and we have no doubt that we shall be favored with still more before the end of the year. The soil now will be much easier to work and should be trenched very deeply if you desire results from the coming spring crops. Few people realize that the foundation for successful cropping does not rest with the seed or after efforts, but the earlier stages mean everything. The soil must be in good condition and should be carefully studied if you would avoid trouble later on. Do not try to save money on fertilizers, as poor soil will raise nothing, and remember that every time you remove crops from the soil you have removed certain important plant food elements which must be put back, and only farmyard manures or well balanced fertilizers will put this back. To sow seeds in soil which has been impoverished year after year is a waste of time and labor. Stiff, heavy soils especially require lime and this is very helpful to the plots after the vegetation from the crops and other refuse has been dug in. Weeds, bean and pea tops may all be trenched in the plots and will decay.

Beans

The Broad Windsor bean, now the most popular for an early spring crop, sown last month, should be well cultivated between the rows when the soil is wet and heavy. There is still time

to make a sowing of this bean in rows three feet apart.

Lettuce

Thin out and transplant to six inches apart the varieties sown last month.

Beets

Sow Early Egyptian and Detroit Dark Red in rows 18 to 20 inches apart. Seed should be sown very thinly and covered one-fourth inch or so. One ounce will sow a 50 foot row. They thrive in a medium heavy soil which should be fairly rich.

Peas

This is a very important crop and being hardy and easy to grow should be in every garden. Successional sowings will keep the family table supplied with nice fresh peas for several months. This crop dislikes heavily manured soil and this is a point to bear in mind. There are many varieties in the seed list of the tall and dwarf varieties, but we only recommend certain varieties which we know have proved their worth. Among the early types are Little Marvel, Alaska and Laxtonian. Alaska is a tall variety and will need supports, but the other two are dwarf. Later varieties are Alderman and Stratagem. An edible podded pea is Melting Sugar. Dwarf types should be planted 20 inches apart in rows and the tall varieties at least three feet apart.

Onions

They delight in a rich soil. We advised sowing early varieties last month, such as Early Pearl Californian, Red and White Bermuda, in rows 20 inches apart. There is still time to sow these early types and the ground should be well prepared

for the later and main crop varieties. This must be well trenched with manure and the surface soil well pulverized and brought to a fine tilth before any seeds are sown. A heavy dressing with soot and wood ashes will be helpful. We shall deal with main crop varieties next month. Onion sets may be planted this month in rows two feet apart, three to four inches apart in the row. These produce very early onions.

Carrots

Those sown last month will need thinning out to at least four inches apart to allow for development. There is still time to sow French Forcing.

Cabbage

There is still time to secure sturdy plants of these to plant out. Autumn King, Drumhead Savoy or Large Flat Dutch are excellent varieties. Plant 12 inches apart in the rows which should be two feet apart. Chinese cabbage or Wong Bok is very delicious and is useful for table as a salad or boiled as greens. It should be more widely grown. Cultivation the same as for ordinary cabbage.

Radish

Winter varieties of these, sown last month, should now be cultivated with the hoe or cultivator fork through the rows.

Asparagus and Rhubarb

Prepare the ground for planting these two profitable crops. They delight in rich soil which must be well trenched and liberally manured. Old plots of asparagus after three years should be dug up and destroyed, as one and two year old roots yield better, hence new beds should be put in yearly to come in succession.

Strawberries and Raspberries

Planting of these popular berries may continue. The varieties mentioned last month will be found the best for quality and cropping. Mulch the older plots with farmyard manure.

Southern California

By D. F. Reichard

NOVEMBER is clean-up month. Our late rains give us a good chance to get the matured crops harvested and either sold or stored for winter use. Prune the trees and shrubs and clean up all the trash and litter about the place; what cannot be put into the compost pile for leaf mold should be burned. This cleaning up each fall goes a long way toward controlling insect and fungus attacks the following year. Any plants that are badly infected, if easily replaced, should be pulled up by the roots and burned; but if they are permanent plants prune back as much as possible and spray thoroughly with resin wash for scale or insects and Bordeaux mixture if infected with any form of fungus.

Unless your corn was planted late it is dry enough to shell and sack. Squash and pumpkins should be brought in and put under shelter before they are frosted. If it is necessary to pile these be careful not to bruise or scratch them and see that all imperfect ones are thrown out for immediate use or sale, according to their condition. One bad squash or pumpkin will soon infect a large portion of the pile. Sweet potatoes must

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

EDITORIALETTES

You wouldn't think it from the Standard, but the great oil company recommends that we all get busy and readjust carburetors, clean up spark plugs and save our gas; we are going to need it. The circular sent out by the Standard people suggests: "It is safe to say that 25 to 30 per cent greater mileage could be obtained on the average of all cars tested with a little intelligent attention to the carburetor adjustment. In the aggregate this would represent an annual saving of from 25 to 30 per cent of the gasoline employed in this country for motor vehicles, no small figure when we consider that there are now in use 7,500,000 automobiles and trucks."

* * *

This is Farmers Marketing Week in Chicago. A committee of seventeen, with advisers from all callings and from all sections of the country, is discussing, particularly, grain marketing. But there will also be talks on centralized cooperative marketing of all kinds. Several Californians are aiding in these discussions.

* * *

Next week will be a full week for California producers at Fresno. Activities really begin on Monday morning when the horticultural commissioners gather. Tuesday morning the state fruit growers open a five day program. Thursday the nurserymen begin to gather and discussions, resolu-

tions and appointment of all kinds of committees will keep producers busy till Saturday. It has been a year since the last convention assembled in Chico, Butte County, the usual spring assembly being omitted this year.

* * *

November is a good time to plant a garden whether of things to eat or things to smell and look at. The soil should be made ready and the winter garden put in. Don't plant potatoes, nor tomatoes, nor beans, nor those things which can hardly be expected to stand even California's crisp bright mornings, but there are plenty of others amongst the hardy ones which will add to comfort and pleasure and likewise to the war savings stamp fund. The Cultivator takes particular pride in its first issue of the month feature, "November in the Vegetable Garden" and "November in the Ornamental Garden." The start in this particular issue is on Page 597.

* * *

Everybody knows about the Red Cross. In fact, everybody is a member, or should be, and whether they have or haven't been during the past year, they should support it during the coming year. The annual membership drive begins next Thursday and continues until Thanksgiving Day. Membership may be had in this wonderful organization for one dollar one year. Make every member of the family a member of the Red Cross. Sign up and make payment at the nearest chapter, application blanks will appear in the next issue of the Cultivator, which may be used to make remittance direct to headquarters at Washington.

WANTED: MONEY!

The whole country is studying finance and credits and asking how we are going to market our crops—studying the question from every angle—but no one in the class has yet volunteered a very explicit answer. The growers have suggested that the banks loosen up; the banks say that the federal reserve holds the key to the situation; the federal reserve and Secretary Houston seem to feel that inflation must stop and that Europe must buy and pay in coin or in credit equivalent to coin. And there another suggestion is made that this country advance cash to financially embarrassed Europe, or, if not the cash, that the credit be guaranteed by our government so that Europe may buy, which would set in motion in this country a stream of currency which will, of itself, solve the whole problem.

There have been a few efforts in a limited way, such as the financing of California cotton growers, but grain, wool and other of the great staple crops are still facing a most embarrassing situation. Presumably European credit will be extended.

However the market letter of the California Alfalfa Growers suggests: "In our opinion we, as well as the other farming interests, are fooling ourselves badly if we expect from the treasury or the banks the help in the way of credit which would be necessary to enable the farmers of the country to carry their different products until they are called for by the current domestic and the solvent export demand in the course of the crop year or later. It is out of the question because neither the treasury nor the reserve bank nor the other banks have it in their power to do this, and even if they could they would not do it, as it would mean further tremendous inflation.

"The secretary of the treasury and the banks are evidently between the devil and the deep sea: They undoubtedly realize the seriousness of the situation of the farming interests, described by them in their recent Washington resolution as 'facing general bankruptcy and ruin unless some immediate remedy is found to relieve the situation'. On the other hand such relief as asked by the farming interests is only possible by further heavy inflation, which is the very thing the banks and all of us would like to get away from."

SPEAKING OF TAXES

We are forever tinkering with our taxes. We dread, we even despise, the tax collector, still we realize that if we are going to be governed we must pay the governors. If we are going to prevent our being governed by brute force of other nations we must tax ourselves to provide a stuffed club which shall convince them that we propose to continue to govern ourselves. Hence the war tax which, notwithstanding our displeasure at its magnitude, must be paid. So we are talking of revision of the federal tax law.

In addition to the holdover war tax we have our own government on our hands, which calls for something like four billions of dollars to carry it through the next 12 months. It was but a few years ago that we were all aghast at the billion dollar congress; today our tastes are even more expensive. So in order to pay interest on some 25 or 30 billions of dollars as the result of the war, and the four billions direct expense, we find there is occasion for real thrift, at least on the part of the "bourgeoisie."

We, the common ones, are trying to escape being the goat, at least the whole goat. Hence, we are holding meetings and discussing taxation and insisting that the burden shall not be entirely lifted from the big incomes and piled upon our shoulders. Of course it would be comparatively easy to pile the whole burden on the farmer or, possibly, the consumer, but the consumer and the farmer are in a rebellious mood and both are demanding that the "sales tax idea" be dropped.

A committee appointed at the Second National Industrial Conference in New York recommends the repeal of the excess profits tax, which will reduce the revenues by something over 900 million dollars. Other corrections are suggested, and to meet these deficits it is proposed by the committee to increase the corporation tax to 16 per cent, to quadruple stamp tax rates, to increase again the first class postage rate to three cents and to levy other burdens on cigarettes, tobacco, musical instruments, candy, chewing gum, cosmetics, gasoline, sugar, tea, coffee, etc.

Regarding the accomplishment of this conference the American Farm Bureau Federation reports: "While this report is only tentative, and will not be formally acted upon by the National Industrial Conference for several weeks, it shows the way the lines are being laid for tax revision. Farmers have won a great victory in securing the condemnation of the sales tax and the Nolan bill by the conference. They can no doubt endorse most of the proposed new taxes, although the wisdom of a federal tax on automobiles and gasoline is very doubtful. The farmer uses his automobile and burns gasoline mainly for business purposes, and the proposed tax will be a tax on two necessary factors in food production."

A Great Convention of Experienced Horticulturists Fresno, November 11, 12, 13, 1920

At every session the men and women who grow, prepare and market \$200,000,000 worth of orchard, seed, florist and nursery products in California annually will present and exploit the best thought and practice of an enlightened horticultural development; there will not be a dull session nor a discussion that will not bristle with facts based on the experience and observation of the people who know.

Here are the basic topics to be covered by each session:

Thursday Forenoon, November 11

A GENERAL SURVEY OF HORTICULTURE

By the Twelve Standing Committees composed of recognized horticulturists in the California Association of Nurseriesmen.

Thursday Afternoon

FACTORS OF TODAY IN FRUIT CULTURE

A symposium of addresses by Fruit Growers, Capners, Shippers and Nurserymen.

Thursday Evening

SIDE LIGHTS ON PLANTING PROBLEMS

Embracing a retrospective glance at the Nursery Industry, Problems in Citrus Culture, and Kindred Subjects.

Friday Forenoon, November 12

A PLEA FOR THE BEAUTIFUL IN PLANT LIFE

A series of addresses on Ornamental Horticulture and its importance and value to California's development and progress.

Friday Afternoon

BUD SELECTION: A PIVOTAL MOVEMENT

A series of addresses by some of the foremost fruit growers, horticultural authorities and fruit tree nurserymen; a subject that is nothing less than revolutionary in its economic tendencies.

Friday Evening—Ladies Night

THE HOME AND THE CITY BEAUTIFUL

A session given over to the ladies of Fresno, who have generously provided a rare program (interspersed with musical numbers) covering a wide range of subjects dealing with public parks and private gardens, including a moving picture story of the California Nursery Industry.

Everybody interested is cordially invited to attend all the sessions.

A complete list of speakers and their subjects will be found in another portion of this paper.

Owing to the heavy travel at this season of the year, visitors should make room reservations in advance through Wm. T. Kirkman, Jr., Tulare and O Streets, Fresno, Calif.

Program and detailed information furnished by

J. E. BERGTHOLDT, President, Newcastle, Cal.

CITRUS, TROPICAL and Full Line of ORNAMENTAL PLANTS

PIONEER NURSERY OF MONROVIA

Copyright 1920, by The Goodyear Tire & Rubber Co.

"The big Goodyear Cord Tires make a motor truck a real farm tool. I use mine to pull a hay cutter, or a rake, or an automatic loader, as well as to haul grain to the threshing machine and then to the barns for storage. The pneumatics roll through our peat bogs, 14 feet deep in places, which we use for fuel supply; teams can't go into them after rains, pneumatics can. I haul pure-bred Holstein stock to St. Paul, 80 miles, without appreciable shrinkage. Others take days to do the harvesting that I do in hours—because of my truck on pneumatics."—E. H. Kuchenbecker, Owner, Oakcraft Grain and Dairy Farm, Owatonna, Minnesota, R. F. D. No. 1

THROUGHOUT agricultural America today there is many a farmer who can make a report similar to the one given above, regarding the all-round utility and value of a truck on Goodyear Cord Tires.

Just as the application of motor power quickens plowing, pumping, spraying, grinding and other farm operations, so does truck power aided by the active pneumatics quicken farm work in a large variety of ways.

All those tons of produce, stock and supplies that otherwise require such tedious toil in handling and hauling, are rapidly loaded and whisked between farm and town on the big, smooth-going Goodyear Cord Tires.

Farm products formerly limited to selling points only a few miles away, now have ready access by means of trucks on Goodyear Cord Tires, to markets sometimes 50 to 100 miles distant.

In the most strenuous of such duty these pneumatics demonstrate the rugged strength of their Goodyear Cord construction which makes possible that exceptional reliability with which they serve.

Farmers' reports of savings and advantages obtained with pneumatic-tired trucks and other motorized equipment, will be mailed on request by The Goodyear Tire & Rubber Company, from Akron, Ohio, or Los Angeles, California.

GOODYEAR

CORD TIRES

The FARMER says— "for stumping genuine GIANT has no equal"

From recent letters of ten farmers who have used Giant Powders for Stumping we make these extracts:

"1. Your Giant Farm Powders shoot the roots. 2. They have wide breaking power and less bad gases than others. 3. I get the same excellent results from them every time. 4. They are always uniform. 5. I used eleven tons and wouldn't have any other make. 6. I want to sell a lot of other powder that I have because Giant does the work much better. 7. Genuine Giant can't be equalled. 8. I don't have to use so much powder when I blast with Giant. 9. You know what we need for stumping. 10. I save money by using Giant Powders."

Write today for our free book, "Better Farming With Giant Farm Powders." It tells how to save money and get better results in stumping, ditching, tree-planting, etc.

My old stump land now pays me \$125 per acre in cotton—and my corn is great, many ears 11 inches around. My One Man Kirstin Pulver pulled 38 inch red pine stumps. All so a 30 x 40 ft. store house to the astonishment of all present.—H. J. Thompson, Appleton, Ark.

Have tried the One Man Kirstin Stump Puller and it works fine. My little boy 10 years old can pull a good size tree with it. F. G. Fule, Aberdeen, Md.

My pine stumps are sold in the ground, and average about one and a half to four feet across the top, but the LITTLE KIRSTIN takes them all out fine.—Mr. R. J. Stoltz, Washburn, Wis.

Quick Shipments from Escanaba, Mich., Atlanta, Ga., Portland, Ore., Soo, Canada

World's Largest Makers of Stump Pullers!

Try This Stump Puller FREE 30 Days

Try It 30 Days FREE!

No horses or extra help required. No digging, chopping or other expense. One average size man alone handles biggest stumps—quick!—easy!—cheap! Saves labor, time, money! Pulls big, little, green, rotten, low-cut, tap-rooted stumps trees or brush—any kind! I send puller without a single penny of money in advance to prove it! If not pleased return at my expense. You don't risk a penny. Four easy ways to pay.

Kirstin ONE MAN STUMP PULLER

Weights less—costs less. Has greater speed, strength and power. Lasts longer! With scientific Kirstin leverage principle a few pounds pull or push on handle exerts tons on stump!

My Big New Book on Stump Pullers FREE!

Tells how to pull stubborn stumps in a few minutes at low cost. Shows how the Kirstin clears acre from one anchor! Low speed to start stump—high to rip it out quick! Patented quick "take up" for slack cable. Easily moved around field. Read the book—the 3 year GUARANTEE AGAINST BREAKAGE—Four Easy Ways to Pay—and Special Agent's Proposition. Shipment from nearest distributing point saves time and freight. Write today! Address: A. J. KIRSTIN COMPANY, ESCANABA, MICHIGAN, 226 E. Morrison St., Portland, Ore.

The Citrus Experiments at Riverside Experiment Station

By R. R. Snowden

THESE experiments were conducted for scientific purposes, and they have served that object well; but as showing the results of the rational use of the several fertilizer materials they mean nothing.

From the growers' standpoint they show, not the use, but the abuse of these.

The agricultural department of the state emphasizes, and every orchardist realizes the indispensable necessity of continued addition of organic matter to the citrus orchard soils for the preservation of normal conditions for tree growth and fruiting. The groves quickly deteriorate when this practice is neglected.

Through the lack of organic matter and depletion of lime in some of these plots the soil has become so baked that it can be detected by merely walking over it. This alone is enough to have ruined the trees.

The demand for lime by citrus trees is so imperative that the extensive use of this material since ten years ago has revolutionized the stability of the citrus groves of the state. About that time mottle-leaf prevailed to such an alarming extent and the failure of the groves to produce fruit was so marked that a conference of the growers was called to discuss the situation.

The Covina Argus of October 15, 1910, has this to say on the subject: "From reliable sources we find that Covina has 1,000 acres of trees in bearing that are not producing one box to the tree on an average. This is not guesswork. These are facts." And suggests that Covina was no worse off in this respect than other citrus districts.

The deficiency of available lime in the orchard soils was discovered to be an adequate cause for the decline of the groves. Now the groves are generally thrifty and little is heard of mottle-leaf or general decadence of the groves. Mottle-leaf has long been recognized as due, among other causes, to a shortage of nitrogen, yet lime has cured most of it by enabling the trees to make use of the nitrogen already present or being supplied. Had lime and organic matter been adequately provided for the trees in the nitrate plot, the results would doubtless have been very different from what they are.

No new plant cells can be produced without lime, therefore growth and fruitage were checked when the supply of available lime—naturally low in this soil—became practically exhausted.

The use of nitrogen by the trees is restricted by lack of lime, hence the trees failed for lack of nitrogen even in the presence of abundance of this element, just as Hilgard pointed out that plants suffer from drouth even when growing in the wettest soils when factors are present preventing the absorption of the water.

When the nitrate of soda was added year after year in excessive quantities which would not be used by the trees, what could be expected but its accumulation?

The available lime has been reduced in the first three feet of the soil of the nitrate plot which contained most of the roots, to .0025 per cent, while organic matter must in 12 years without renewal have become entirely destroyed. The trees on the blood plot are also in a bad condition because, while blood is a more or less complete fertilizer, it does not supply sufficient organic matter. The manure plot contains the best trees of all, simply because manure is a complete fertilizer plus the necessary organic matter. In the sodium nitrate plot there is no trace of black alkali. There has been no increase of sulphates. Bicarbonate has increased to but a limited extent. The only marked accumulation is of nitrate of soda, which has been added year after year long after the trees could use it. It naturally accumulated. Any other material added would have accumulated under such circumstances. It is well known that citrus trees can be actually killed with super or acid phosphate or any other

fertilizer material, excepting none

Here is proof that nitrate of soda does not injure citrus trees when properly used. The appended photographs show fine orange and lemon trees that have received more nitrate of soda than those in the Riverside plot. The photo No. 1 shows lemon trees that have received 9,200 pounds of nitrate of soda per acre and are still thrifty and bearing much fine fruit. Yet Loughridge regards the lemon as the least tolerant of all the fruit trees. The photo No. 2 shows orange trees in Kenneth MacRae's grove at Rialto, that have received

Lemon and Orange Trees Showing Results at Riverside Experiment Station

The upper is photo No. 1 and the lower is photo No. 2 referred to in Dr. Snowden's article.

8,400 pounds of nitrate of soda per acre and are still thrifty and bearing good crops of the finest fruit in that district. The nitrate of soda has been used on the plots in the Riverside experiment in violation of every principle and requirement of correct agricultural practice, and nothing but most pronounced failure could be expected.

The rational method of procedure would have been to supply everything needed, then check such a combination with a particular plant food element against the same combination without such element and note the difference in results. This would have given each tested material a fair chance against every other and would have resulted in positive, practical benefit to the grower.

RAISIN COMPANY APPOINTS NEW SALES MANAGER

The directors of the Associated Raisin Company have announced the appointment of Stanley Q. Brady to succeed Holgate Thomas as sales manager. Mr. Brady, who is at present in Chicago, has been Western sales manager for Thomas H. Lipton and will begin his new duties about November 15 in order to familiarize himself with the work before Mr. Thomas leaves about the first of the year.

Rains did considerable damage to rice fields in Glenn and Colusa Counties, with the wind leveling and tugging the heavier growth so it cannot be harvested except by hand reaping.

Report of Deciduous Spraying Plots

Under Direction of H. J. Ryan, L. A. Co. Hort. Com.

Many deciduous growers during this past season had their fruit turned down by canneries, and some of them were at a loss to know why it was not accepted. Members of the farm adviser's staff were called on by various deciduous growers to determine what were the specific causes of the poor condition of the fruit. In a survey made of the fruit orchards of Los Angeles County it was found that a great deal of the fruit turned down by canneries was marred by scab and other fungi. It was also observed that those orchards which were sprayed properly produced clean fruit.

In order to call to the attention of deciduous growers the importance of spraying to protect against fungi attacks, such as bud blight, shot hole, curly leaf and scab, several spraying demonstrations were given by the farm adviser for Los Angeles County in cooperation with two spraying machine companies and two companies supplying lime-sulphur, under the auspices of the farm bureau. The first series was given during December and the second during February, just while the buds were swelling. Lime-sulphur in the proportions of 10 to 1 was used as the spray material.

To show what spraying will accomplish towards keeping trees healthy and the fruit clean, a summary of the results of the different plots is given as follows:

Owensmouth, place of J. C. Craig. A peach orchard was sprayed in December, 1919, one row unsprayed as a check. A second spraying was given in February, 1920. Results: The row left unsprayed had a severe attack of curly leaf, causing the trees to become weakened and the fruit not up to standard. The sprayed trees had no curly leaf and the fruit was clean.

Van Nuys, place of W. F. Clark. Eight apricot trees were sprayed in December and a second spraying was given in February. Results: The fruit was free from scab and the leaves showed but little shot hole fungus in comparison with the unsprayed orchard.

Van Nuys, place of C. W. Potter. Eight peach and one apricot trees were sprayed in December and a second spraying was given in February while buds were swelling. Results: Apricots were cleaner and freer from shot hole scabbing where sprayed. The peach trees sprayed were free from curly leaf, while those unsprayed that were of a susceptible variety were badly attacked.

Lankershim, place of Chas. Osborne. One row of peach trees was sprayed in December and a second spraying was given in February. Results: The sprayed trees had comparatively clean fruit, while the unsprayed trees were severely attacked by scab. Bud blight was much less severe on the sprayed trees. It happened that the sprayed row and the row next to it were of a variety which is not very susceptible to curly leaf disease, so the plot did not demonstrate the effectiveness of spraying to control curly leaf disease.

Burbank, place of G. D. Radcliff. Two rows of peach trees were sprayed in December and the entire orchard was sprayed in February of 1920. The unsprayed orchards surrounding this orchard served as checks. The sprayed trees had very clean fruit while the near by orchards had scabbed fruit.

These plots demonstrated clearly that spraying deciduous trees is a paying investment. Those orchards which were sprayed at the right times also produced clean fruit which canneries paid good prices for. Fruit growers must recognize the fact that canneries in the future will demand good clean fruit, and the only prevention of the attack of various fungus diseases is by spraying.

In order to again call to the attention of deciduous fruit growers the specific diseases that can be controlled by spraying and to demonstrate meth-

ods of applying spray materials, several field meetings will be held by the farm bureau in conjunction with commercial concerns who will supply the equipment and material needed, during the early winter and spring months. Publicity will be given by the local papers and post card notices will be sent to all farm bureau members of those centers where the demonstrations will be given, announcing the time and place of meetings.

UNIVERSITY FRUIT SHOW

Not only are the farmers of our own state sending specimens to the division of pomology of the college of agriculture to be used in the fruit show that is to be held at Berkeley in November, but many Eastern farmers have signified their intention of having some of their fruit on exhibit. Among the outside states from which fruit will be had are New York, Michigan, South Carolina and West Virginia.

The way the fruit has been coming in for the past two weeks indicates that the show will be a success. Nevertheless it is earnestly hoped that ad-

ditional collections of plates can be obtained from other growers. Fruit for exhibition purposes can be sent postpaid any time before November 15, addressed Division of Pomology, Berkeley, California. It will be given the best of care by being placed in cold storage until the date of the show.

An interesting feature will be exhibits of fruits and vegetables dried under different conditions. The quality and color of fruits sun dried and dehydrated will be clearly shown, as a very complete collection will be on hand. There will also be an exhibit of by-products.

"Did the first frost catch you with some corn still out?"

The Western Electric Power and Light Outfit is a strong arm on any farm.

"Harvest is a time of worry and hard work to us farmers — and we don't always get the crops in either. Time is short and help can't be had. Anyway, that was my fix up till this year, when I put in a Western Electric Power and Light Outfit. Of course this outfit doesn't do any field work. But the work it does do saved so much of my time that I was able to get all my corn in before the first frost."

B. B. Griesemer

Editor's Note: Mr. Griesemer is a farmer near Griesemerville, Berks County, Pa.

MAYBE you have done better in getting farmhands to work for you than I could. In recent years I've been a sort of a farmhand and chore boy rolled into one. I was so busy milking cows, grinding feed and pumping water that I couldn't get through all my work in the field.

"Not long ago I began to notice the good work done by an electric farm plant belonging to one of my neighbors. It gave all the light needed, but what I liked even better was that it was a powerful plant, built with the idea of doing a man's work.

An outfit that saves time and labor

"The name of this powerful plant was Western Electric, and because I believed it would give me the help I needed, I installed a Western Elec-

tric on my farm. The story of what it did may interest you, if you need help too and if you believe an electric outfit should supply power even more than light.

The portable motor makes churning easy

grindstone. I tell you, that engine can handle a lot of work. The powerful battery gives all the light needed, and it runs my wife's washing machine and pumps the water.

"So you see, Western Electric power is saving me a lot of time. When harvest came around, I was

able to work about three hours more in the field every day. That is why I got all my corn safely in."

The battery lasts longer!

The reason the Western Electric battery lasts so long is that it is charged without stress or strain. As it fills, the rate of flow becomes less very gradually till the current stops by itself. This "tapering charge" means long life to the battery.

For more information about the powerful Western Electric Outfit, send a postcard for booklet CC7. The nearest distributor to you will be glad to furnish it.

With Electric power you can have running water all the time.

DE LAVAL IRRIGATION PUMPS

High Efficiency Saves Power

For years the De Laval has set the standard for pumps, especially those for irrigating purposes. Their supremacy has been attained by a continual study of conditions and a score of engineers whose one aim has been for improvement. The De Laval is a guaranteed pump. It marks the highest point of efficiency.

Write for our booklet entitled
"The Selecting and Testing of Centrifugal Pumps."
This is one of a series of advertisements explaining
the different parts of the De Laval Irrigation Pump.

Saturday Morning—Unfinished Business, New Business, Reports of Committees, Selection of the 1921 Meeting Place, Election of Officers for 1921.

Fourth Annual Gathering of the Ladies Auxiliary will be in session Thursday, Friday and Saturday.

California Certified Seed Potato Growers

In connection with the Fruit Growers and Farmers Convention will be held the annual meeting of the California Certified Seed Potato Growers. President George H. Peters will preside and J. L. Olson, secretary, will be present. There will be discussion of certified seed potato situation in California, standardization of commercial potato packs and lessons to California growers from Eastern methods. This session will be on Friday, November 12.

State Association of County Horticultural Commissioners

The first convention of the week will be that of the state association of county horticultural commissioners. It will be called to order early Monday morning and another session will be held on Friday, November 12. There will doubtless be other sessions between times, though primarily the sessions of the state convention will be attended. Some of these sessions of the commissioners will be executive.

The state forestry bureau, the state highway commission and the landscape engineering department of the state university are cooperating in plans for systematic tree and shrub planting in harmony with surroundings.

PASADENA FLOWER SHOW

The Pasadena Horticultural Society again added to its already enviable record by staging another grand plant and floral exhibit on October 28-30, covering the same broad range of ornamental and economic plants and fruits as in the past, from acacia flowers and avocados to walnuts and zinnias. Two novelties of merit were shown, a new sword fern, *Nephrolepis Hillsii*, named for its originator, and a penstemon of large size, scarlet with white throat, named "Sierra Madre" by the hybridizer, W. W. Felgate. The attendance from the opening hour was all that was expected. The judging was by experts from various sections of the south, two coming from Santa Barbara, two from Pasadena, and one, a member of the Cultivator staff.

Honest Shoes For Honest Work

Mayer Honorbilt Work Shoes

MADE of honest leather, "Built on Honor" by skilled workers, *Honorbilt Work Shoes* will give double the wear of ordinary shoes.

Suitable for every kind of work on the farm too. For the leather in *Honorbilt Work Shoes* is double tanned to resist the alkali in the soil and the leather-eating barn yard acids.

And you will find these long wearing shoes always soft and easy on your feet. Wet work will not make them hard; they stay pliable and comfortable with the roughest use.

Honorbilt work and dress shoes, for every one in the family, are sold by leading dealers everywhere. All bear the Mayer *Honorbilt* trade mark—a guarantee of quality that never fails. Look for it on the soles and if your dealer does not handle *Honorbilt Shoes* write us.

NOVEMBER VEGETABLE GARDEN FOR SOUTHERN CALIFORNIA

(Continued from Page 597.)

be dug before frost if one wishes to retain their flavor and keeping qualities. If only a small quantity are to be put away, select clean, firm tubers, wrap each one separately in one thickness of newspaper and pack in boxes or pack in dry sand in boxes so that the tubers do not touch each other. To store in large quantities stack in a convenient place alternating layers of dry sand and potatoes, then cover the whole so as to keep the rain out. The important thing about keeping sweet potatoes is to keep them dry.

This is the month to begin planning what you are going to plant next year and where and when it will be planted. On all vacated ground spread a liberal coating of manure to be leached into the soil with the rains. If the rains are too slow coming, irrigation or sprinkling will have to be resorted to. However the moisture is obtained, there should be enough to soak down at least two feet. The ground should be worked to a depth of not less than one foot, so that it will be in condition to take all the moisture that may come to it during the winter.

Cultivate shortly after each rain storm, so that the surface will be thoroughly broken up, thus making a mulch to hold the moisture in the ground.

During these cool months it is not advisable to plant any of the tender summer vegetables such as beans, tomatoes, squash and corn.

Plants from seeds sown at this time do not develop as rapidly as during the warmer months. Plant now for early spring harvest Egyptian beets; carrots, turnips, radishes, early and winter varieties; Wonderful lettuce; prickly spinach; onions, seeds or sets; cabbage and cauliflower plants for winter or the seed for spring; salify and dwarf peas.

Jerusalem artichoke, horseradish, asparagus and rhubarb roots may be set from this time until early spring. In frostless sections potatoes may be planted during this month for early spring potatoes. Seed of egg plant, peppers and tomatoes are started in hot beds or hot houses for young plants to be set in early spring.

All stuff planted during the last few months will need irrigating as long as the rains hold off, and we should watch the young plants that they do not want for moisture.

Southern Arizona

By M. E. Bemis

ARDENING activities for November suffer a curtailment in variety of plantings. Seeds which may be planted and plants which may be transplanted are about the same as those for October, with a few exceptions.

The list includes beets, carrots, lettuce, onion seeds and onion sets, parsley, parsnips, peas, radishes, spinach, turnips, cabbage plants, cauliflower plants, and strawberry plants.

The nights now are getting quite cool; frosts will be common although the warm sunshine of the days will keep the ground from becoming chilled to such an extent as to prevent germination. I find that plantings of lettuce, parsley, radishes and similar seeds germinate now much more quickly than in September. We have a right to expect that such seeds as are recommended for planting in November will germinate and that the plants will make considerable growth during the warm days of winter and be only temporarily set back by the frosts. Of course the rapid growth of early spring is not to be expected, but plants like peas will come up, grow slowly and develop a root growth which will enable them to grow luxuriantly when the days begin to lengthen after Christmas. The varieties for November garden work have been described in previous articles so that a repetition is not necessary.

Strawberries are a somewhat neglected crop for the home garden. Old gardeners and strawberry growers seem well agreed that they do better when put out the latter part of November and through December, rather than in the spring. Probably this is due quite largely to the fact that they acquire a root growth without danger of wilting. The Arizona Ever-bearing has proved the best variety for our Southwestern conditions. Strawberries are grown commercially now almost altogether by Japanese and Chinese gardeners in southern Arizona, but for the home garden where space will permit there is nothing that will repay more largely in satisfaction than a few strawberry plants.

There is a little satisfaction in the fact that in the cooler months, while plants do not make quite so rapid a growth, neither do the weeds. Irrigation is not necessarily as frequent but care should be taken that a crust does not form after the irrigations or after rains, for while the nights are cool the sun is warm enough through the day to bake the soil if it is not broken at just the right time after wetting.

November in the Ornamental Garden

Southern California

By Ernest Branton

NOVEMBER is usually the most active gardening month for the reason that nearly all soil workers wait for rains before attempting serious gardening, and rains usually come early in November. At any rate, preparation should be made without regard to weather. Any seeds, bulbs should be included in this month's list.

Sweet peas sown now give splendid results both in size of bloom and length of stem for they develop best during cool weather. They thrive best in deep rich soil. Some dig three feet deep in preparation, finely pulverize the soil and mix it with a good supply of decomposed animal manures before refilling. Then sow seeds at the bottom of a six-inch trench and as plants grow gradually fill up the trench. That places the roots in cool moist soil.

Get a box of clean sharp sand and propagate hardy perennials for bedding and border. The edging plant, alternanthera, is one of them, and begonias, coleus, fuchsia, heliotrope and marguerite are others easily multiplied at this time. See that sand is clean, not less than four inches deep and of good drainage through box. Do not push cuttings into wet sand or the ends will be bruised and probable decay and failure follow. Make holes

with a stick larger than cuttings or make a slit through sand, along a straight edge with a knife or thin paddle.

Real hardy perennial tops such as penstemons should be cut back heavily to produce a winter flowering growth, but heliotrope, fuchsias and those subject to frost injury are better left until March, also tender vines needing pruning. Mulch pansy and violet beds now for the blooming season is at hand and a cool damp soil is necessary to fine flowers. This is a good season for bedding herbaceous perennials—they will give you winter blooms. Rose bushes are usually sparingly watered during late summer and will spring into active blooming growth under the stimulus of the first heavy rain. Cut away now all small and weak wood and open centers of bushes if growth is so thick as to exclude light and air. Give a heavy top mulch of stable manure and spade this under when spring warmth begins and renew the top dressing to stimulate the spring growth, for flowers will come then in greatest number.

Take up chrysanthemum clumps, if space is needed, and replant temporarily close together so they may later be torn apart for 1921 planting or used as source for cuttings for propagation in sand. Take up clumps of cannas and all of a tropical nature whose tops are at a standstill or have been injured by frost. These should not be replanted until March or April. Nor need they be moved from pres-

For a Big Day's Work

A big day's work, every day, year after year, with no stops nor delays to hinder performance—that's what you get in a Rumely OilPull tractor. A distinctive design and exclusive features make this possible. Ten years' test has proved it.

The OilPull catalog tells it all—ask for a copy.

ent quarters unless the space they occupy is needed; merely cut the tops off. Do not fertilize lawns now except in the warmest location for otherwise blue grass will make a new growth easily killed by a sharp frost. A better reason for not fertilizing is that the winter's rains will wash away or carry below the grass root zone fully 90 per cent of the food value of stable manure. The grass, moreover, does not need more food until making heavy spring growth. Therefore defer feeding until food is necessary and the diluting and destroying rains are nearly over. February is early enough.

Northern California

By A. R. Gould

THE recent early rains, which have been more than encouraging, have started garden operations in the ornamental section, and orders are being placed with the nurseries for all varieties of trees and shrubs, and those who contemplate extensive planting we would advise to prepare their list and get the order in. Go over your garden very carefully and form some idea as to the changes you would like to make. Some shrubs may have died, others may need replacing.

This also applies to roses, and when ordering these see that young stock is secured. Now is an excellent time to get the rose plots in shape and before planting have the ground thoroughly well manured. Lawns may also be renovated and new plantings made this month. When spading in farmyard manure during the preparations trench it well beneath the surface and allow the weeds to come through before sowing any grass seed, and the surface should be well raked.

Now that the winter is coming on the tuberous types of begonias must be dug up and stored from the frost. The same applies to dahlia tubers. It is advisable to label each for color before storing in the cellar. They must be kept dry. All tender varieties of water lilies should be removed from the pools and protected for the winter.

Propagation

Roses, hydrangeas, fuchsias and other ornamentals such as privet, crataegus, etc., may be propagated now in sandy soil. It is necessary that they be inserted firmly in the soil and kept moderately moist. Carnations may also be propagated by layering or cuttings.

The Spring Garden

For a display of bloom in early spring we would suggest the following subjects: Crocus, snowdrops, muscari, narcissus, hyacinths, tulips, English daisy, ranunculus, iris, primulas in variety, aubretia, pansy, viola, wallflower, alyssum, saxatile, violets, forget-me-nots and winter flowering stocks. All these should be planted now and they will provide a successional supply of bloom from the early months of the year. For a selection of bulbs such as tulips, etc., see last month's calendar notes. Seeds of our California wild flowers such as the phacelia and nemophila, both charming blue subjects, clarkia, godetia, bartonia, gilia, California poppy, may be sown now and may be scattered broadcast on soil which has been previously cultivated. Nothing is more beautiful than masses of these wild flowers. Nemophila isignis will form a charming blue carpet over the ground.

Hollyhocks and Foxglove

These stately plants are effective planted at the back of a flower border and if sturdy plants are set out this month they will flower early next year. The hollyhock may be had in a number of shades, frilled, single and double.

Early Flowering Gladiolus

The best of this early flowering race are The Bride, Peach Blossom and Ne Plus Ultra. Bulbs of these may be planted in fairly rich soil now.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Marsh Pasture Land

I have a mountain place where some of the land is very springy the year around, the cattle punch it full of holes when pasturing on it. Would like to seed it to something that would make good pasture and not kill out from tramping.

Wild clover does well there, also timothy and red top. Several have told me to seed it to alsike clover so am asking your advice. If you advise it, what time should it be sown and how? The land is too springy to get on with drill or other implements. It snows about December and lies on until about March or April.—Subscriber, Standish, Lassen County.

The advice to sow alsike clover is good; it thrives most on wet soils. But we believe Paspalum dilatatum will prove superior to all others. The heavy tufts make a sod that will support cattle on land such as you describe. Ten pounds to the acre are usually sown, broadcasted. As it seeds freely you may get a good start by

using half that amount. No objection lies to sowing some alsike clover also. In your case no method is possible except sowing by hand. This should not be done until May or June, though the clover may be sown a month earlier.

Replanting Apricots

I have an old peach orchard with a few scattered two to four year old apricot trees in it and am taking out the trees to plant to vines and alfalfa. Can I transplant these apricot trees? Some of them bore a few 'cots this year and are 12 to 15 feet tall.—Subscriber, Caruthers.

No, we would not endeavor to replant the apricot trees. Nurserymen usually follow the practice of burning deciduous nursery trees rather than holding over and resetting. It is not satisfactory. With nursery trees at present prices the temptation is very strong but we believe the results will justify securing new trees only two years from seed.

Milo Fodder

I have a patch of Milo maize. Would you suggest feeding the stalks to my cow? Someone told me it was too sharp and would cut the stomach and

only the leaves should be cut off and fed.—Subscriber, Oxnard.

We would surely let the cow do her own stripping of leaves and use such of this fodder as she can handle. We never have heard of any injury whatever from cured milo fodder. Freshly cut and without wilting directly from the field might under certain conditions cause poisoning, but with wilting there is no danger, and we believe none from cutting or mechanical injury.

Alfalfa Variety

What variety of alfalfa would you recommend for this section? The common seems to predominate, but the Hairy Peruvian is very popular just now.—Subscriber, Turlock.

Unless your local conditions have proved unsatisfactory to Hairy Peruvian we would plant that in preference to the Chilean or "common" variety. The Hairy Peruvian has shown ability to continue growth later in the fall and give perhaps one more cutting than the ordinary variety.

Seasoning Eucalyptus Lumber

How is eucalyptus wood seasoned so it will not check nor warp out of shape?—Subscriber, Anaheim.

Uneven drying and checking can be largely prevented by careful piling and protecting, so far as possible, from wind and sun. The cross strips at ends should be placed as near to the end of the timbers as possible. Also, pile up lumber on good foundation where it will be perfectly even and cannot warp.

Rotation

How many years must newly plowed up alfalfa land be farmed before it can again be seeded to alfalfa?—Subscriber, Turlock.

From two or four years, if possible. Alfalfa is one of the best soil builders, but like other clovers has a faculty of making the soil "clover sick." In other words, any crop does better when rotated with an entirely dissimilar crop. Of course we do not know the nature of this particular soil, but from the fact that it is located in Turlock would suggest cantaloupes as first crop in rotation. Sugar beets are excellent and necessitate deep culture, which fits the soil for the next planting of alfalfa. In that section sugar beets may not be so attractive, however, and if the inquirer is a dairyman then mangels or big stock beets would afford the same opportunity and prove wonderfully profitable. Then there are peanuts, which seem to be a coming crop, and also pumpkins, the various green sorghums, wheat and barley, and innumerable other crops which would prove profitable, give the soil a rest and, if thoroughly clean culture is given, afford opportunity to kill out Bermuda and other pests which are liable to be a serious menace to the alfalfa when it is planted again.

Figs Dropping

Will you tell me what is the trouble with my white fig trees. They are healthy and young but always shed the fruit before it is mature or ripe. I have been told to hang a limb from another fig tree in my trees. Would this be of any help and how should it be done? I secured the cuttings from Chico about three or four years ago.—Subscriber.

This is probably a case where the Blastophaga, or fig wasp, has not been introduced, and of course it is too late this season to be of any value. The true Smyrna fig requires pollination, but owing to the peculiar structure of the flowers of the fig, which are all within, the only way to successfully pollinate is to introduce the tiny fig wasp, which breeds in the capri or wild fig brought to this country from Asia Minor, as was the insect. The pollen from this capri answers the purpose of perfectly pollinating the Smyrna. Unless these fig wasps are in the fruit on the branch put in the tree there would be no benefit from it. This pollination should be done in June or July.

Multiplying Farm Hours

THE FARMER who is not properly equipped, has this problem to contend with: getting his farm work done on time and, at the same time, doing necessary hauling that requires labor and horses which cannot well be spared from pressing seasonal work on the farm.

During the days of plentiful, cheap labor, this problem was partly solved by hired help. But today it is being met in an entirely different way—by **International Motor Trucks**.

These efficient hauling units multiply farm hours—save for essential farm work about two-thirds of the time that was formerly spent on the road, in addition to saving the horses for work in the fields.

Do you feel the need of more farm hours? Do you begrudge the time that you devote to hauling farm products to town and needed supplies back to the farm? Does the distance between your farm and your local market sometimes seem much too far? Is the working efficiency of your horses impaired by hard trips to town?

Think about this; and while you are thinking, drop a post card to the address below so that we can mail you a pamphlet that will tell you how to multiply your farm hours and simplify your hauling—with an **International Motor Truck**. There is a style of body and a size of truck for every hauling requirement— $\frac{3}{4}$ -ton to $3\frac{1}{2}$ -ton capacities.

A Real Giant Among Power Sprayers

High Pressure, of course; the Bean drives the spray onto the trees in a dense saturating mist which reaches every crack and crevice—and *kills the pest*. Large capacity, too—a Bean outfit will throw more liquid than any other outfit with the same size engine. But there's more to a Bean than pressure and capacity. There's the equally important feature of absolute dependability—downright sturdiness—ability to stay on the job until the work is done.

Stays on the Job

The Bean stays with it hour after hour—day after day—until the spraying season is over. When spraying time is at hand, there is no time to waste with adjustments, replacements, or repairs. You have all you can do at the business end of the spray rod or gun—no time to waste with the engine and pump. A day's delay may mean a tremendous loss. With a Bean, you simply start the outfit, open up the nozzle, and forget everything but the saturating of the trees. You get—

- high pressure
- more gallons of liquid per minute
- speedier work
- more thorough covering
- absolute dependability at all times

You never find Bean Threadless Ball Valves corroded or stuck tight because there are no threads to stick.

No Stuffing Boxes

No stuffing box troubles because the Bean has no stuffing boxes. Think of that.

The Bean Re-filler enables you to fill up the tank in less than five minutes. Another big saving of time.

Bean Pressure Regulator

The Bean Pressure Regulator holds the pressure exactly where you want it, and makes possible the removal of any valve in two minutes with full pressure in the air chamber and without stopping the engine. No time lost here.

Send the Coupon

There are many other vitally important Bean features illustrated and described in the new Bean catalog which tells you all about the Bean line of Hand and Power sprays, Spray Rods, Spray Guns, Spray Hose, and other accessories. Send the Coupon.

DELCO LIGHT

The definite announcement and power plant for your announcement to enable power problem.

As been necessary to exercise readjusted. DELCO-light electric light and power readjustment.

Of increased capacity will \$675—the 1¼ kilowatt labor load of your farm, try it.

Farmers of America follows LIGHT for the past five fit the farm for the front, -saving relief.

Higher wages for farm help are established. But present DELCO-LIGHT wages, paid in the form of fuel costs and upkeep, only amount to from 5 to 10 cents per day on the average farm. For this sum, the house and outbuildings equipped with labor-saving devices and also brilliantly lighted have complete service from an individually-owned electric light and power plant.

DELCO-LIGHT is standardized mechanically and stabilized in price. To-day, you know just what the cost will be to own and operate this profit-making, fool-proof plant. You are safeguarded at every step in its purchase. You cannot make a mistake.

You are invited to make a 30-day test on a money-back guarantee before purchasing. Demonstrate for yourself that DELCO-LIGHT operates at a cost of a few cents a day. Any user of DELCO-LIGHT—there are more than 3000 on the Pacific Coast alone—will tell you why he believes the plant will last a lifetime, and it will. It is ready for service on delivery.

ORDER a plant today from the DELCO-LIGHT dealer nearest you. He will install it immediately and your personally-conducted test begins. Have DELCO-LIGHT in operation before the days shorten. Watch it call a halt to the knocking-off of work because of darkness. Know what it means to live in a home like more than 100,000 DELCO-LIGHTED homes in the country. They no longer have drudgery. You need not. Put some of your crop money in DELCO-LIGHT today. It will pay you highest interest. And you'll get back the principal, too, because DELCO-LIGHT pays for itself quickly. Sold on your own choice of terms on a money-back guarantee.

Hollow Hill Farm at Colton is having wonderful luck with Guernsey calves from their show cows this fall. Imp. Cherry III of the Effards, who

was grand champion female at the Southern California fair, recently dropped a fine heifer sired by King of Hollow Hill, the great son of Itchen Daisy's May King of Langwater, whom W. H. Dupee sold last

spring for \$20,000. Fan of Bickleigh, the senior champion at Riverside in 1919, also dropped a heifer by King of Hollow Hill. Princess Selma, the first prize two year old and reserve senior champion at Riverside this year, repeated with a heifer by Effic's King of Hollow Hill Farm, a son of Imp. Cherry III of the Effards. All of these cows combine show type with high production records.

Jim Thorp of Lockeford, who has been at the Southern California shows with his fine herd of Jerseys, took home three spring Duroc gilts from the Diamond Bar Ranch. One was by the great herd boar, Ace of Pathfinders; one was by Mammoth Sensation Junior and the other by Great Pathfinder. Mr. Thorp also bought a spring boar sired by Mammoth Sensation Junior from A. L. Ludwig of Downey. This boar pig was the largest at the Los Angeles show.

Chas. Maurer, the man who is responsible for the great job of fitting and showing A. B. Humphrey's Guern-

seys and Berkshires from the Grape-wild Farm, Escalon, reports the sale of quite a few Berkshires recently, among which were four yearling boars to one purchaser.

William Briggs, senior member of the Hereford breeding firm, William Briggs & Son, Dixon, is now in the East visiting a number of the leading herds. He expects to attend the American Royal Show at Kansas City before he returns.

H. A. Hare of San Francisco was the buyer of the three year old Jersey bull, St. Mawes of Bellevue, consigned to the recent sale at Salem, Oregon for \$1,500.

D. G. Cummins and Son, Visalia, report that their good Duroc-Jersey sow, Golden Sensation, is still running true to form. Last spring this sow raised a litter of 14 pigs, ten of which were gilts. This fall she is raising a litter of 12.

A. Buckland and Son, Fresno, exhibited their Poland Chinas at the recent Chowchilla fair and won first in every class they entered, and most of the championships. Their boar California Jumbo Buster, was senior and grand champion, defeating the Sacramento winner.

M. Fortini, owner of the Tintagel herd of Jerseys that made such a record at the recent state fair, reports that Jewel of Tintagel, last year's junior champion, has recently given birth to a son. Fortini expects to have the young fellow out on the show circuit next year.

R. A. Condee, in charge of livestock, George Junior Republic, Chino, has sold the junior yearling Holstein bull, Republic Korndyke Pontiac, a son of the Los Angeles grand champion, Dichter Spofford Korndyke Lad 5th, to J. W. Welty, El Monte. The dam of this youngster has a two year old record of 501 pounds butter from 14,000 pounds milk.

In the dispersal sale of Holsteins held by E. Peterposten, Modesto, October 20, 36 head made a general average of \$330. Jane De Kol of Linwood topped the sale and was taken by H. A. Stammerjohan, Turlock, for \$1,000.

Prize Guernseys For Sale

A number of the prize winners—male and female—in our show herd are for sale. They combine type with high production.

Caledonia Farms Shorthorns

West Sacramento, Cal.

Friday, November 12

60 Scotch and Scotch Topped Females and Bulls

IMP. CALEDONIA

GAINFORD MATCHLESS

Why Breed Shorthorns in California?

During the last two years the writer has gone to considerable length to point out the real opportunity that is open to the man in this state who undertakes the production of registered Shorthorns and he is of the firm opinion that under proper conditions there is no more attractive business. Every element necessary to success is present in California. In the first place, our climatic and feed conditions are unexcelled. Secondly, because of the wide importance of the range industry (and it will always be an important business) we at once have a market that will readily absorb vastly more bulls than we are producing even under present demand. Nothing is more certain than that the demand for bulls of better quality will increase as more and more men come to appreciate the real possibilities for increasing the efficiency of their cattle through the use of purebred bulls of the right sort. At the present time hundreds of bulls are bought in the East for the reason that they are not being produced here. Buyers would prefer home bred bulls. The production of more bulls depends upon the establishment of many more units of breeding cows. During the last few years the Shorthorn business has undergone a healthy expansion in this state and we have yet to find a new man who has bought the right sort of cattle and who has handled them along same lines who is not enthusiastic. At the same time the business is sorely undeveloped. The time has passed when it is necessary for buyers to leave this state for Shorthorn cattle suitable for foundation purposes. We now have some of the best herd bulls in the country and their blood is available to all. In view of the above we regard the coming draft sale from the Caledonia Farms' herd to be held on the above date as an opportunity of extreme importance.

What This Sale Offers

The offering that has been selected consists of 30 mature cows, and 20 heifers carrying their first calves. Individually the offering is the right sort and from the standpoint of breeding it is such that buyers can purchase with entire confidence. A glance through the catalog discloses the fact that there are six daughters of Pine Grove Kinz, easily one of the outstanding bulls in the West; eight daughters of Glenbrook's Marquis, one of the greatest sires ever in the West; four daughters of Whitehall Sultan; two by Fond Lavender, three by King of Paicinea—each a grand son of the famous Whitehall Sultan; four by the imported bull, Champion of Scotland and others. In addition to the above the sale offers a chance to add to your herd the blood of the three Caledonia herd bulls, Imp. Caledonia, Gainford Matchless, and Pine Grove Kinz. It is quite within the facts to state that no Western herd has three as valuable herd bulls. For the more critical buyers a few Scotch cows and heifers have been listed. These represent the Victoria, Lustre and Acanthus families. The major portion of the offering consists of tried and proven American sorts that have excellent Scotch tops. The ten bulls are all young fellows. Several are Scotch and all are the right sort. Fifteen of the cows will sell with calves at foot.

The sale will offer a striking demonstration of the real beef qualities of the Shorthorn as the cattle have never tasted grain yet are of great scale and thickness. They have been handled just as any practical cattleman would. Here is a real chance to get a start with Shorthorns and build up a profitable and pleasant business and the future will prove the soundness of all that has been said.

Signed: R. P. ROYCE,
For the California Cultivator.

Betsy Lamb Prilly

Mr. H. E. Vogel, owner of Westlawn Farms, finds it necessary to reseed most of his alfalfa fields, and for that reason has decided to disperse his entire milking herd of registered Holsteins, selling also a number of bred heifers and a limited number of choice young bulls.

The herd as it stands today is the result of twenty years of constructive breeding, during which production, type, and good health have been maintained in splendid balance in the herd.

In respect to type, this is one of the very greatest herds in the west and visitors on sale day will find an array of young females with straight top lines, splendid udders, and all around type such as can rarely be found in one herd anywhere.

As to production and pedigree, the catalog pages tell a most interesting and satisfactory story that will interest those who appreciate the better sorts of Holsteins.

This herd has been regularly tuberculin tested for many years and has always borne an excellent reputation for good health generally. We believe it to be one of the most satisfactory herds in the state in this respect.

Among the females to be sold are

BETSY LAMB PRILLY, 35.03 lbs. butter from 743.3 lbs. milk in 7 days, grand champion cow at 1919 San Francisco Livestock Show, and she sells heavy with calf to King Aralia Mead, who is by King Mead of Riverside out of the 1161.48 lb. cow Margaret Aralia De Kol.

A DAUGHTER OF KING MEAD OF RIVERSIDE, out of a 24 lb. daughter of Ignaro De Kol that made 762.73 lbs. butter from 18,424.6 lbs. milk in one year.

A 22 POUND GRANDDAUGHTER OF ARLAIA DE KOL, with 717.01 lbs. butter from 16,946.8 lbs. milk in one year as a 3 year old, her dam a 954 lb. yearly record daughter of the 1,085 lb. former world's record milk cow Riverside Sadie De Kol Burke. Her three nearest dams average 1,060 lbs. butter in one year.

A 21 POUND DAUGHTER OF PRINCE GELSCHER WALKER, out of De Kol of Valley Mead 3d, 845.11 lbs. butter in one year.

A YEARLING DAUGHTER of the above cow, sired by Sir Aaggie De Kol Mead, who is by Sir Aaggie De Kol Acme and out of Miss Valley Mead De Kol Walker, dam of the \$12,000 bull King Korndyke Pontiac 20th.

DISPERSAL SALE

45 Registered Holsteins

25 Grade Holstein Cows and Heifers

60 Head Feeder Hogs

One Fine Team Horses

Small Ranch, Fresno, Cal.

Tuesday, November 16, 1920

The owners have decided to plant their ranch to vineyard and will make a complete dispersal of their dairy herd.

The foundation of this herd was purchased in the Stevens Bros. dispersal sale at Liverpool, New York, and contains animals of most substantial breeding, including a great young cow with an official record of over 26 lbs. butter in 7 days as a 3 year old.

The herd sire is IT SNOWBALL, a son of It out of a 24 lb. 4 year old daughter of King of the Pontiacs, and the sale list includes 17 of his young daughters.

Among other choice things in the offering are:

A DAUGHTER of the 31 lb. son of King of the Pontiacs, King Pontiac Diona Pietertje.

FIVE DAUGHTERS of the 32 lb. bull King Pontiac Pietertje De Kol.

A DAUGHTER of King Pontiac Ormsby Pietertje, who is by King Korndyke Hengerveld Ormsby out of a 27 lb. daughter of King of the Pontiacs.

PLEASE NOTE—The necessity for getting these cattle off the land in order to prepare for the vineyard this fall does not give us time to prepare the usual catalog. We will have ready by sale day a list showing the breeding of the various animals, and an extended pedigree of each animal will be furnished the buyer.

These cattle will be presented in ordinary working condition, every registered animal guaranteed to be a breeder, but no tuberculin test certificates will be furnished as the herd has never been tested.

THE 60 HOGS range in weight from 80 to 180 pounds, and are a good bunch for feeding purposes.

THE GRADE COWS AND HEIFERS include 13 cows, 5 two year old heifers, and 7 head of heifers from six months to one year old.

SALE BEGINS AT 10 A. M. on above date, on the Small Ranch, about 12 miles southwest of Fresno, 3 miles north of Caruthers, on Dinuba Avenue, between Marks and Valentine.

Owners: **SMALL & DAVENPORT**, Fresno, Cal.

60 REGISTERED HOLSTEINS

Fourth Tulare Sale

Sales Pavilion, Tulare, Cal.

Thursday, December 2, 1920

There are not many surplus registered Holstein females for sale in the vicinity of Tulare County, and this offering will fill a real need in helping to meet the excellent local demand, as well as to furnish buyers from a distance an opportunity to secure well bred young breeding females.

Contributors to sale:

Gotshall & Magruder, Ripon.
Alex Whaley, Tulare.
R. C. Sturgeon, Tulare.
H. E. Spires, Caruthers.

F. S. Borrer & Son, Tipton.
Harry Hill & Son, Riverdale.
Peter Lowson, Tulare.
E. D. Barry, Jr., Daggett.

Females of excellent breeding and good type, mostly bred to high record bulls, will feature the sale, including

SPLENDID YEARLY RECORD COWS!
DAUGHTERS OF YEARLY RECORD COWS!
HEIFERS AND COWS IN CALF TO SOME OF CALIFORNIA'S BEST SIRES!

Watch for details of individuals in following issues, but write for catalog now.

Every animal positively guaranteed to be a breeder; every animal over six months old tuberculin tested and sold subject to retest by the buyer.

CALIFORNIA BUTTER AND CHEESE SCORING CONTEST

By G. D. Turnbow, Assistant Professor of Dairy Industry

The second scoring of the 1920 California Educational Butter and Cheese Scoring Contest, conducted by the dairy industry division, university farm, was held at Makins Produce Company, San Francisco, on October 1.

The samples of butter and one of cheese were entered for scoring. G. J. Harris of San Francisco, S. L. Denning of Oakland and G. D. Turnbow of Davis were the judges.

F. Simonsen of the Northern California Milk Producers Association, Sacramento, received 93½, the highest commercial score awarded. Mr. Simonsen also received a composition score of 100, giving him a total average score of 96.63; this was the highest average score awarded. A. Wirz of

Hollister Creamery Company, Hollister, received 92½, the second highest commercial score. The second highest average score was awarded G. R. Jaehnig, university farm, who received a commercial score of 92 and a composition score of 100, giving him an average score of 96. O. A. Ghiggioli, university farm, received a score of 91 on cheddar cheese.

Following is a list of the commercial scores as awarded exhibitors receiving an average score of 95 or above:

F. Simonsen, N. C. M. P. Association, 93½; Bodega Cooperative Creamery, 91; Julian Series, Scotts Dairy Co., 90½; Salinas Creamery Co., 91½; G. R. Jaehnig, university farm, 92; Fred Deter, Montague Creamery, 91½; A. Wirz, Hollister Creamery Co., 92½.

Cheddar Cheese

O. A. Ghiggioli, university farm, 91. Quality of Butter

The entries of butter as a whole were of a poor quality. The average commercial score of the ten samples was 91.52. Several samples were criticized for having an unclear flavor and some showed that old cream had been used. Neutralizer flavors were scarce. A marked increase in the efficiency of the buttermaker was shown, the average composition score being 96.65, with six out of ten entries receiving a perfect score on composition. This is a far better record than has been shown in any previous scoring contest. A good many of the buttermakers are overworking their butter and received a cut on greasiness in the body of their butter.

The next scoring contest will be held at the dairy industry division, Davis, on November 4, in connection with the buttermakers short course and the fourth annual meeting of the California Butter, Cheese and Ice Cream Makers Association. There will be prominent speakers on the program, scoring contests for buttermakers and liberal prizes offered for buttermakers and cheesemakers. This will be the last scoring of the 1920 contest, and every buttermaker and cheesemaker should be on hand at this time, as every effort will be put forth to make this the most successful event of the year.

We believe that most of the free markets in the towns of California have been discontinued. We regret this but it seems to be a law of trade that it is the farmer's province to produce and the dealer's to handle the product and deliver it to the consumer. Hence the necessity for cooperation and the employment by the farmer of the dealer.

WESTERN CATTLEMEN PLAN DECEMBER MEETING

THE call sent out by the California Cattlemen's Association suggesting a conference of stockmen from the 12 Western states has received widespread approval. Opinion seems to be unanimous that Salt Lake City is the logical place for the meeting and the only remaining question is that of date. It is now proposed that the conference be held on December 6, 7 and 8. The annual meeting of the United Stockmen's Association for Federal Control of Public Grazing Lands will be held at that time, and it is probable that the meetings will be combined.

This is the most important movement of recent years toward solution of the marketing, financial and legislative troubles that beset cattle growers and that have become especially acute this year.

In its call suggesting the conference the California Cattlemen's Association proposed that definite plans be worked out for handling the seasonal surplus supplies of cattle from each state, for securing federal financial aid and for withholding half fat cattle and feeders from prime cattle markets.

The call was sent to cattlemen's associations in Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Texas, Washington, Wyoming and Utah.

JERSEY SALE

A very interesting public sale of registered Jersey cows was that made by Grant A. Brown at Clearwater on Friday, October 22. The offering from Mr. Brown's Eastmont herd at El Monte consisted of 17 cows, one heifer and a few bull calves, the latter selling separately from dams. All heifers sired by the Eastmont herd bull, Lady's Shylock's Financier, are reserved by Brown for foundation blood.

The sale crowd was one of the best assembled at the Rhoades & Rhoades sales headquarters in many months, there being about 30 ladies in attendance.

The selling was snappy from start to finish. An average of \$260 was realized on the entire lot, with no outstanding high price for the day.

A detailed statement of sales follows:

1. Nancy's Miss Raleigh, F. M. West, Fullerton, \$175.
2. Raleigh's Golden Lois, F. W. West, Fullerton, \$155.
3. Conquest's Nellie, J. R. Carhart, Fullerton, \$390.
4. Golden Grey Mist, W. E. De Sombre, Anaheim, \$250.
5. Marquis Golden Lou, J. W. Gaines, Hynes, \$200.
6. Olga's Irmalia Atta, M. O. Sullivan, Chino, \$230.
7. Gene of Willowood, Aaron Miller Whittier, \$410.
8. Dot of Willowood 2d, Ray Case, Lamanda Park, \$155.
9. Lottie of Willowood, L. E. West, Gardena, \$400.
10. Neoma of Willowood, J. W. Gaines, \$290.
11. Fawn of Willowood, James H. Scott, Los Angeles, \$275.
12. Irmalia of Willowood, L. A. Easton, Anaheim, \$200.
13. Jennie of Willowood, A. R. McIntosh, Compton, \$200.
14. Gertie of Willowood, F. M. West, \$410.
15. Alga's Golden Queen, C. Wiman, \$300.
16. Rioter's Golden Gladys, Ed Jennings, Covina, \$125.
17. June's Golden Girl, Fred Gale, Alhambra, \$240.

Guy H. Miller is a careful breeder of Jerseys, of Jerseys that are not only true in form but true producers. He writes:

"I wish to report the Register of Merit test of the Jersey heifer, Vega of Venadera, recently completed. Vega began test at 26 months of age. For the year she gave 6,123 pounds of milk with an average test of 5.83 per cent fat, making 356 pounds of butter fat. Vega was fed and milked but twice daily and ran with herd throughout the year. Vega was sired by our former herd sire, Altama Interest, and is his fourteenth daughter to enter the Register of Merit. Her dam is Beatrice of Venadera, one of the six Register of Merit daughters of Margery Goldens Fox."

62---Registered Hereford Females---62

At Public Auction

Thursday, November 18, 1920

Finnell Stock Farm Company has on its ranch over 180 head of registered Herefords, representing the entire herd purchased from Kiesel Land & Stock Co. in Oregon, some months ago. This is a larger herd than the ranch will accommodate at present, and this sale is made to reduce the herd to proper size.

This is in no sense a sale of the tail ends, in fact the owners have kept out of the sale list entirely all animals about which there might be a reasonable doubt, or that are badly out of condition, of which there were only a few in the entire herd.

The herd is headed by BEAU BLANCHARD 37TH, a son of the famous Beau Blanchard, and by SIR THOMAS, a proven breeding bull. Both of these sires will be represented in the sale by groups of excellent daughters, and all females in calf carry their services.

Out of the 62 lots of females, 43 WERE BORN IN 1917 OR LATER, the balance in 1913 or later, comprising a most useful herd of young females of substantial breeding and individual merit. Among them are

- 16 COWS WITH CALVES AT FOOT
- 25 BRED COWS AND HEIFERS
- 21 OPEN HEIFERS OF BREEDING AGE

These cattle have been raised strictly under range conditions, are in good thrifty condition, and present an unusually attractive opportunity for investment either for beginners or established breeders as young, clean brood material.

Every animal sold as a single lot guaranteed to be a breeder; every animal tuberculin tested and individual certificates furnished.

FINNELL STOCK FARM, is what was formerly the Henderson Ranch, about 9 miles east and slightly south of Galt, about 35 miles southeast of Sacramento.

Owners:

Finnell Stock Farm Company
Galt (Sacramento County) California

Management

California Breeders Sales and Pedigree Company

C. L. Hughes, Sales Manager, Sacramento, Cal.

Auctioneers: Col. Ben A. Rhoades, Los Angeles; Col. John A. Davis, Manteca

Special Notice

The owners have on hand 28 yearling and 2 year old bulls suitable for range service. None of these will appear in the public sale but may be bargained for at private treaty now or on sale day.

SMALL INVESTMENT IN HEREFORDS BRINGS GOOD RETURNS

The small farmer is too often led to believe that the breeding of pure bred cattle presents too many difficulties and too large an outlay of capital for him to attempt to do anything with. He has heard and read of the long prices paid for breeding stock, the expense connected with advertising and public sales, until he has put away the idea of ever getting into the business, labeling it a rich man's game.

"It is unfortunate that so many of our small farmers have been so led to believe," says R. J. Kinzer, secretary of the American Hereford Breeders Association, "for many would make successful breeders. In fact, there are many instances where this is the case. The trouble is we have heard more of the big men in the business who are breeding cattle as a plaything than of the man of limited means who is paying for his farm and making his living out of Herefords."

"A striking example of what can be done on a small farm with a limited outlay of money is that of E. C. Smith, Mechanicsville, Iowa. Mr. Smith bought his first Herefords seven years ago. More out of curiosity than anything else, he attended a dispersion sale of pure bred Herefords in 1913. When the sale was over he owned three three-year-old bred cows and three yearling heifers. He then bought a well bred young bull from a neighbor, which was his last purchase until two years later when he attended another auction sale and bought a bred cow and a yearling heifer."

"The total outlay for pure bred Herefords on Mr. Smith's farm was \$2,497.50. Starting with these few females he has up to the present time recorded 91 head of calves. During this time \$10,763.12 worth of pure bred cattle have been sold from the farm and the present herd contains 40 head of registered Herefords valued by Mr. Smith at \$13,000."

"Records have not been kept of the expense of raising these cattle, but practically all of the feed has been produced on the farm and no expensive labor has been employed, so that Mr. Smith feels that with \$23,763.12 gross returns against an original investment of \$2,497.50, Herefords have paid him well for his time."

PREPARING MEAT FOR STORAGE

After successfully curing a supply of meat, the question of storage must be considered. This can be accomplished by first wrapping each piece separately in good strong paper and then placing the same in a cotton or canvas bag. If you have a supply of flour bags on hand, these will answer the purpose. Now securely tie the bags and paint the outside with a coat of whitewash to which some glue has been added. Or better still, prepare the following mixture, which has been found superior to the whitewash: 3 pounds of barium sulphate, .06 pound of glue, .08 pound of lead chromate and .4 pound of wheat flour.

First mix the flour with a small quantity of water to a smooth consistency, then add water to make four gallons. In a separate vessel dissolve the lead chromate in one or two quarts of water, then add the lead chromate solution and the glue to the flour mixture. While bringing this to a boil, add slowly the barium sulphate and stir thoroughly. This solution should be made the day before.

The sacks can be dipped and the meat packages put in, or the sacks can be filled and tied, and the solution applied by means of an ordinary whitewash or paint brush.

The sacks and their contents should be hung in a cool, dry place which is well ventilated. Meat stored in this manner should not be disturbed until needed for use, since handling of the dried sacks would cause the coating to break and peel.

Orange County cow testing report shows for the last month membership of 700 cows, many of which went above the 50 pound mark. Sixty-three tested above 40 pounds and the average of these high testers was 43.44. The highest testing cow was in the herd of Wm. Segerstrom. This cow gave an average daily milk production of 48 pounds testing five per cent, a total fat for the month of 72 pounds.

LAST CALL!

—REGISTERED—FEDERAL TESTED—

155 HOLSTEINS 155

State Fair Grounds, Sacramento, Cal.

November 10-11, 1920

If You Want

To buy from the first entire sale of Federal tested and inspected Holsteins ever sold in California—

To buy from a selection of 100 high class cows of milking age—

To buy from an offering that is a notable one in breeding, production, and high average type—

To buy females in calf to five bulls of most popular and high record breeding—

To buy from an offering in which the owners have used the most conscientious efforts to exclude from the sale list any animal that might prove unsatisfactory to the buyer—

To buy from an offering of bulls, mostly ready for service, that is one of the choicest ever offered to dairymen in California—

BE SURE AND BE AT THIS SALE!

BLACKHAWK RANCH BUYS GREAT SHORTHORN BULL

Announcement has just been made that Messrs. Easton and Ward, owners of the famous Blackhawk Ranch, Diablo, were the successful bidders for the great young bull, Collynie Prince Lavender, that was the top of the great Duthie sale in Scotland. Collynie Prince Lavender is a white January son of the noted bull, Masterstroke, and his dam is Sittyton Lavender 26th. In a recent issue of the Shorthorn World appeared the following statement by one of the staff who recently visited the leading Scottish herds: "Sittyton Lavender 26th is a grand cow. She produced the calf that topped last year's sale, Collynie King Lavender, that went to Cazelet for 5,200 guineas (\$26,000). For this year she was nursing a white January calf by the great Masterstroke. The calves were not named at the time we were there but whoever gets a white bull calf by Masterstroke out of Sittyton Lavender 26th will have one of the best prospects I have seen in many a long day. I am anxiously awaiting a report of the sale that I may congratulate the buyer." No announcement of the price has been made, but word has been received that the sale averaged \$3,750 and that the top was 3,200 guineas — and it is known that the bull secured by the Blackhawk Ranch was regarded as one of the choicest lots.

The bringing to this state of such a bull means much for the future of the breed in the West. For one thing it is evidence that California breeders are determined to own as good bulls as the breed affords and that it will be possible for breeders of California to secure bloodlines that are not surpassed in America. Messrs. Ward and Easton are to be congratulated on their new purchase and we feel sure that the entire Shorthorn fraternity will appreciate their splendid enterprise. In addition to the bull four high class heifers have been selected and the entire shipment is expected to arrive about the middle of December. Mr. Loveii, manager of Blackhawk Ranch, made the selections and will accompany the cattle to the ranch.

LIVESTOCK MARKETING CONFERENCE

The conference called by President Howard of the American Farm Bureau Federation to consider means of developing a more satisfactory livestock marketing plan, brought representatives of all the important livestock producing and marketing organizations of the Midwest. The chief action of the conference was the decision to delegate to a committee of not less than 15 the duty of making a thorough study of livestock marketing conditions and methods.

This was similar to action taken by the grain marketing conference in July, from which has developed the Farmers Marketing Committee of Seventeen, which met in Chicago and started on plans for marketing the nation's grain crop.

The question of securing better livestock statistical reports was discussed at considerable length. The value of such figures would depend largely upon the speed and accuracy with which they are collected, the skill used in interpreting same, and the completeness with which the facts and advice arrived at are put into the hands of the farmer. A representative of the bureau of crop estimates stated that if the machinery of the existing farmers organizations, particularly the farm bureaus, could be utilized in collecting the figures and disseminating the advice based on the compiled figures, an additional appropriation of \$200,000 would enable the bureau to establish a very satisfactory livestock reporting service.

Meetings of the farm centers of the Tehama County farm bureau will be held at Dairyville, Nov. 10; Antelope, 11; Oak Park, 12; Richfield, 15; Proberta, 17; Corning, 18; Bend, 19; Los Molinos, 22; Liberal, 25; Manton, 26; Bowman, 27.

THE MAN OF THE HOUR

Whenever you need a man who has speed,
Look for the man that's a fighter;
Who'll never let go, but whom blow after
blow
Will only make hang on the tighter.

The man who will dig into tasks that are
big
Is always the one to be trusted,
It's the indolent chap who don't care a
rap
For Success, with whom we're dis-
gusted.

For the test of a man is the way he will
scan
A difficult task and pitch in it.
We judge men by deeds and know the
world needs
A man of the hour every minute.
—Stuart W. Knight in Harvester World.

ALL ABOARD FOR THE FURNITURE ISLANDS

By Clara Peterson

(Continued from last week.)

WOULD your father let you walk down to the palace with us?" asked Jennie timidly.

She had no sooner said "palace" than the fawn was on its feet, and though the girls looked to every side there was nothing to be seen of the little deer and its father.

"How can they get away so quickly?" pouted Janie. "This is the funniest country!"

Now that they were nearer to the palace it looked more splendid than ever. The hill was so steep that the twins had quite a time getting down it. Once in a while they were afraid they would fall straight into the King's front yard. There was an oblong lake on the other side of the palace. The sisters could catch glimpses of it sparkling like silver, and they didn't think it a bit queer that the lake looked so much like the mirror on their bureau.

Finally they found a path and in 10 minutes they were down on the first terrace. There were colored flowers everywhere and a marble walk leading up to a low balcony. And sitting in a satin chair on the balcony, with her back toward them and her hair down in two golden braids, was a slender lady in a shimmering lavender gown.

"Janie—do you think it could be Cinderella?" whispered Jennie.

Before Janie had time to answer, a little fuzzy white dog jumped down from the Queen's lap, and sticking his head through an opening in the white balustrade, said, "Ki yi! Ki yi! Ki yi!" until the lady held her pretty hands to her ears and turned around.

Her face was so lovely and she made such a picture standing there and smiling down at them, that the twins couldn't say a word. The lady spoke first, shaking the little dog and then standing him on the broad rail.

Isn't he funny? He's trying to frighten you away, but even the birds aren't afraid of him. Just a moment and I'll let you in."

She pointed to a bronze door a few steps from the twins, and they skipped over to it and stood waiting, almost too happy to breathe. It was a very homey door in spite of being the door of a palace. There was a long panel of dotted lace over the glass and two great rose trees in tubs stood on guard.

The twins hadn't even time to stick their noses into the lowest fragrant blossoms for the door opened without a sound and the Queen stood there smiling.

"I am so glad to see you. And may I ask who you are? But now, I won't tease you. You are Janie and Jennie and I'm Cinderella."

She had led them into a soft carpeted hall full of paintings, and she kept right on talking to make them feel at home.

"Come. We'll all sit down on this bearskin. Isn't it soft? The cook is freezing some banana sherbet for us. She's been awfully cross today for Paintetta and Cammie ate up everything she had cooked for over Sunday and Cammie went right into the kitchen while she was out. He lifted up the top of the ice chest with his nose and drank 16 quarts of raspberry punch she had whipped up for dinner. Now tell me all about yourselves. I'm such a talker you will have to excuse me."

But the twins thought they would like to hear her talk forever, for Cinderella had the most musical voice in the world and her teeth were like little snowy grains of corn when she laughed.

Janie told her about Pussycat Mew and the funny sea lion children (the Queen said she had had them all to a party not long before and Rex had pretended to think that Mewlinda's tall was a fish so there was quite a bit of excitement for a while), and Jennie had just commenced on the story of the disappearing bunnies and the fawn, when a little page in black velvet announced lunch.

They all ran out to the dining room. The walls were covered with purple satin and the curtains were silver peacock feathers on which glistened dew drops of pearl. There was a round table covered by a spread of cobweb lace, and the twins had two small gilt chairs just like Cinderella's big one.

The banana sherbet was so delicious and the twins were so busy trying not to spoil the ice cream lily which decorated each dish that no one said a word for quite a few minutes. But when the crystal glasses were empty Cinderella said:

"I am so glad you came, for this has been the loneliest day! My lady in waiting has cried for hours and hours. She and her knight, Sir Arthur, have had a dreadful quarrel, and though I've done my best I can't get Alicia to make up."

"Now what shall we do?"

Without waiting for the twins' answer she jumped up from her high backed chair and, taking hold of their hands, ran out the dining room doors which opened into an old fashioned garden of hollyhocks and bachelor buttons and verbenas.

"You see," chattered Cinderella.

"The King, my husband, is away for the day and I hardly know what to do without him. Paintetta and Cammie were fighting so that they weren't much company and I was so happy when I heard that you were coming."

"What should you like to see most of all?"

"I suppose we couldn't see the coach," whispered Janie.

"Or the slipper—" said Jennie more loudly.

With the jolliest kind of a smile Cinderella led them down the terraces past a fountain of yellow speckled marble, and straight to the coach house which stood at the foot of the bluff. She touched a button and the wooden doors flew open.

"You can imagine how grand I thought I was, riding in that," said Cinderella. "It was quite different from doing piles and stacks of dishes and scrubbing the floors."

The twins were gazing at the carriage with wide eyes, for it was the right one without a doubt. The coach house was hung with dusky velvet so that the coach stood out like a topaz in an ebony frame.

It was pumpkin color and shaped like a jack o' lantern. There was a cunning round door with a gold handle, and the wheels were shiny black.

Cinderella turned the handle for the twins and they bumped their heads together peeping in. The coach was paneled with orange silk and there were a great many big round cushions of golden cloth with a small black clock face embroidered in each corner—and the hands of every clock were pointing to 12.

"The slipper is in my husband's jewel casket and that is locked," said Cinderella. "It is nothing but plain glass just exactly like the pictures—Paintetta has done it often. I'm sure I don't know why the King should be so fond of it."

But she did know and she blushed happily as she said it.

Then the three went through a lane of pomegranate trees to a grassy hill overlooking the lake, and Cinderella pointed out in the distance a white pillared cottage.

"My stepmother and my father live there and they are very happy now. As for my sisters, they married gentlemen of the court and moved to another country, but I often hear from them. The elder has the darlinest baby boy you ever saw."

"Now let's go to Alicia."

The Cultivator Patterns

BE SURE TO FIND SIZE

3394-3383. A Smart Costume. — Waist cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 3393 cut in seven sizes: 24, 26, 28, 30, 32, 34 and 36 inches waist measure. Alicia was in her boudoir. She was exactly different from Cinderella. Her hair and eyes were black. She was daintily plump and she wore a trailing dress of heavy sapphire lace.

Cinderella and the twins sat down on a tapestry bench and waited while Alicia bathed her eyes and powdered her nose. She smiled at Janie and Jennie when she had finished, but her eyes didn't smile; they were very sad.

"Haven't you forgiven him?" asked Cinderella patiently.

"I can't forgive him," answered Alicia, biting her cherry lips to keep from crying. "He says he loves me, but what he does love are his gun and his sword. He is forever killing, just for the sport of it—not for food but for pleasure. He cannot see that it is wrong. I shall not marry him."

Cinderella took Alicia's hand and the twins felt suddenly that they were in the way, so arising they tiptoed to the long window beside the dressing table. The Queen nodded her head and they stepped out upon the grass. For a long time they walked about the lawn, admiring the flowers and the gorgeous trees.

"Isn't it too bad about Lady Alicia?" asked Janie suddenly.

"Yes, it—" began Jennie. She stopped, for with a sudden turn they had come to an area way enclosed by an evergreen hedge. The twins found themselves at the little green hedge gate. Inside were two men, one with a deer over his shoulder and one who looked like Uncle Bob. The one with the deer had on blue overalls, but the Uncle Bob man wore a hunting suit of emerald green and a cocked hat with a white feather. He did not see the twins and he was laughing over something the other man had said. His face was brown but his eyes looked blue and he was tall and slim.

"A fine one that, eh Jacob?" said he. "I'll have to find a place for it."

"That's Sir Arthur!" whispered Jennie, but Janie did not answer and looking around, her sister saw that she was crying.

"It's the little fawn's father—it is, the face is just like his," said Janie. "Oh, the poor little fawn."

Then Sir Arthur saw them.

"Well, well! And who, pray, are these small maids? Come in; I have something to show you."

He drew them inside the hedge and looked down, smiling, but Janie's eyes were running over.

"Why is she weeping?" asked the knight in surprise. Janie could not answer.

"I'll tell you why. It's why Lady Alicia is crying too—it's because you kill things," said Jennie rather fiercely.

"But, child," answered the knight, "I do not kill the small ones, or those half grown—why should your sister weep? I do not harm her playmates."

"Yes, you do, you do too!" cried Jennie, standing in front of her twin. "Now we know why all the animals on the hill hate the palace. It is because you have been there killing when you don't need to. What if you don't kill the little ones, you kill their mothers and their fathers and they starve!"

The knight was so amazed at this outbreak that he sat down on a wooden bench and simply stared at the twins. Finally he spoke:

"You are right. Many a time I have killed a mother rabbit or a squirrel, never thinking of the young ones. You're right. Alicia shall have her way."

The last was said so very softly that Jennie could hardly hear it. She had turned to Janie and was comforting her.

(Continued next week.)

HOW TO AVOID JAR BREAKAGE

Do not place cold jars, either filled or unfilled, in hot water.

Do not place hot jars in cold water.

Do not overpack jars which are to be processed. Some products, like corn, pumpkin, peas, Lima beans and sweet potatoes, swell in processing. Pack jar only to within one-half inch of top.

Do not allow draft of cold air to strike jars when they are removed from the canner.

The wire bail should not fit too tightly or the jar will break when the lever is forced down.

All new jars should be tempered before using. To do it, put them in cold water sufficient to cover them and bring to a boil.—United States department of agriculture.

Before you buy a piano or player-piano get these books

— "How to Know a Good Piano" tells how pianos are made and points out the qualities you should look for to be sure of securing a dependable instrument.

"The A. B. C. of the Manualo" tells what makes the player-piano play and explains how this mechanism has been so developed and perfected by Baldwin that the Manualo enables you to play with the same expression through the pedals as upon the keys.

The Manualo

The Player-piano that is all but human.

This Folder Tells You How To Make Your Idle Land Earn Money

This is the day and age when you should make every foot of land produce profits for you. If you have any size tract ranging from 80 to 5,000 acres in the Western States that need development you should send for this book at once. It tells you the way to develop your property through the use of Hydro-Electric plants, gravity irrigation systems, pumping plants, grading, and buildings; in fact, it points out the various essentials that are necessary to make your ranch a producing property. Now is the time to act, so that you can get a crop from your land next year. It is a certainty that crops will bring good prices next year, so take advantage of this condition and get your land under cultivation now. Write today, stating location of land and number of acres.

IT SELDOM FAILS

Many boys and girls as they progress in their teens, outgrow strength.

Scott's Emulsion

should be given generously and regularly to most children of school-age. Scott's Emulsion is tonic-nourishment that seldom fails.

Scott & Bowne, Bloomfield, N. J. 20-47

Take KI-MOIDS for Indigestion.

LARGEST FARM BUREAU HOME DEPARTMENT

By C. M. Bloom, Escondido

The Escondido home department of the farm bureau which claims the largest membership of any in the United States is truly a boon to the women of the Sun Kist valley.

Its first chairman, Mrs. N. Matzen, had the courage to organize it during the war when women seemed taxed to the utmost, both as to time and money. That her unbounded enthusiasm has had much to do with its success no one can deny.

It was rather a small band of women who gathered for the first meeting; but subsequent meetings were advertised, and all the women of the surrounding country, whether or not members of the farm bureau, were invited to attend. As soon as the splendid work done under the leadership of Miss Fleda Smith, home demonstrator of the farm bureau of San Diego County, and Mrs. Matzen, the local chairman, became known the membership increased from ten to 120.

The monthly meetings are held in the Escondido Woman's Club House, through the courtesy of the club. If each and every member of the club would drop in at one of the meetings and see the large crowd of earnest women and girls at work, they would feel well content that they are giving the use of their club house for such a purpose.

At first cooking demonstrations were held. Later came canning and drying of fruits and vegetables. Recently the demand for millinery and dress-making has been so great that the time has been given up to those two branches. One of the special things they have done is the making of dress forms. We are informed that interior decoration and landscape gardening are to be taken up later.

Miss Jessie Lee Decker of Berkeley, state demonstrator at large, comes occasionally, bringing new ideas and new enthusiasm to the women.

It seems fitting that such things should be taught at this time when the nation wide slogan is "Thrift," for the women go from these meetings to their homes and often fashion, with but trifling cost, hats, dresses and other garments which are truly smart.

HOUSEHOLD QUERIES

Avocado Ice Cream

I was interested in reading in recent issue of the Cultivator about the avocado luncheon of the Association and particularly in the mention of avocado ice cream. Will you please send me a recipe for making that kind of ice cream. It sounds awfully good.—Subscriber, San Francisco.

Here is the recipe given out by the California Avocado Association:

Yolks of five eggs, one quart milk, green Maraschino cherries, two cups sugar, four medium sized avocados, almond and vanilla extract. Make a boiled custard with the milk, egg and one cup sugar, flavor with vanilla. Mash the fruit to a pulp with one cup sugar and flavor with almond. When the custard is cool add the fruit and freeze. Serve with green Maraschino cherries on top of each dish.

Soap Turns Rancid

What is the trouble with my home made soap? It is nice and white and hard but gets rancid after keeping for a time. Is it because of too much grease for the amount of lye? Which is the best brand of lye for soap making? We think the Cultivator the paper.—Subscriber, Bakersfield.

Excess of grease is the cause of the soap turning rancid. We think there is no choice between either of the standard brands of lye. Perhaps the best help we can give our Bakersfield inquirer is to give complete directions for making soft and hard soap. The first was sent to the Cultivator by Mrs. E. T. Smith of Upper

Solve the Labor Problem

No Pushing
Runs Itself
Boy or Girl
Can
Operate It

The Merry Garden Auto Cultivator enables one man to do the work of four. No pushing or pulling—and simply guide it. Travels 120 to 200 feet per minute and cultivates four to five inches deep and within one-half inch of plants.

Equipped with Evinrude 2 H. P. motor and costs but three to four cents per hour to operate.

ALFALFA SEED

A Letter to California Farmers and Seedsmen

During the past sixty days we have selected for our trade approximately 1,000 bags of the finest and purest alfalfa seed grown in the Yuma Valley, and until further notice will fill all orders at the following prices:

Hairy Peruvian 35c. Smooth Peruvian 30c.

American (Common) 24c.

DELIVERED BY EXPRESS. WE PAY THE CHARGES

The Hairy Peruvian and Smooth Peruvian comprising our stock come from fields with absolutely PERFECT PEDIGREES. Every bag is CERTIFIED, LABELED AND SEALED under direction of the State Agricultural Department. All three varieties show a fine, golden color, and were carefully selected for high purity and germination.

For 11 years our seed has won first prize at the Arizona State Fair in competition with other growers and dealers of the State.

At the Fourteenth International Soil-Products Exposition held in Kansas City last year, in competition with the entire United States, our seed won BOTH FIRST AND SECOND PRIZES.

We are proud of this record. We have a reputation to maintain. We guarantee every bag of seed we sell to be exactly as represented.

Place your orders now and take advantage of the low prices ruling at the beginning of the season.

Lake; the second is from the head of the household economics department of the Colorado agricultural college.

Soft soap. In the first place, when you wish to save ashes for soap be sure you burn nothing but oak or ash wood. Prepare a leach anyway you please, but I take a barrel and bore some holes across the bottom of it, then set it on an inclined platform, placing a piece of board on each side of the holes to make a channel for the lye to run through; then, before filling the barrel with ashes, place two or three inches of clean straw in the bottom of the barrel, then put your ashes in, leaving a little place scooped out at the top in which to put water. The first lye that runs through will be very strong, but it becomes weaker the more it is drained off. I have a 15 gallon kettle in which I make soap and I pour the lye in this until it is about three-fourths full, then test it with a fresh egg, and if the egg shows more than a spot the size of a silver dime above the surface of the lye it is too strong and must be weakened by adding water; if the egg barely floats it is too weak and will require more boiling. To have it the proper strength is very essential. Having the lye the proper strength, put your grease in and start your fire. If, when it comes to a boil, the lye absorbs all the grease, add some more until some floats on top after the soap thickens, which it is apt to do almost as soon as it comes to a boil. I boil it half or three-quarters of an hour. Sometimes it seems thin at first, but thickens after it gets cold; if it absorbs the grease it will be soap.

Hard Soap. Make soap of fats which cannot be used for cooking. First clarify the fat. Melt it up and add water, bring to a boil and allow to cool. The fat will form a solid cake on the top of the water. The impurities may be removed from the bottom of the fat. Melt fat again and heat until all water has evaporated, all bubbling stops. Then slice a medium sized potato into the fat and strain through a dry piece of cheese

cloth. To each five pounds of lukewarm grease use one small can lye, one quart cold water, one-half cup hot water, three tablespoons borax, one-fourth cup household ammonia, two tablespoons sugar, one teaspoon salt. Mix lye and cold water; let stand till cold, stirring occasionally. Mix one-half cup hot water with three tablespoons borax. Let this cool and add one-fourth cup household ammonia, two tablespoons sugar and one teaspoon salt. Pour lye into grease slowly, stirring continually with a wooden spoon or spatula. Add other mixture, stir until light and thick. Pour into an enameled pan lined with paraffin paper. Crease before soap gets cold.

If any of our housekeeper readers can help from their experience in soap-making we shall be glad to give subscription credit for suggestions published.

"In Flanders Fields"

Will you please print the poem, "In Flanders Fields." I think I first saw it some time ago in the Cultivator, but don't remember just when. Think it was about the beginning of the war. —Subscriber, Los Angeles.

This was first printed in the Cultivator in November, 1917. It was written by Lieut. Col. John McRae of the Canadian Expeditionary Forces, who shortly after gave up his life on Flanders fields. It first appeared under title "The Torch," though we believe it is almost universally known as "In Flanders Fields."

"IN FLANDERS FIELDS"

In Flanders fields the poppies blow
Between the crosses, row on row,
That mark our place, and in the sky
The larks, still bravely singing, fly,
Scarce heard amidst the guns below.
We are the dead. Short days ago
We lived, felt dawn, saw sunset glow,
Loved and were loved, and now we lie
In Flanders fields.

Take up our quarrel with the foe,
To you from falling hands we throw
The torch—be yours to hold it high,
If ye break faith with us who die,
We shall not sleep though poppies grow
In Flanders fields.

Coconut Custard Pie Recipe Wanted

Will you please print in California Cultivator recipe for a good old fashioned coconut custard pie and in return I will give a very good recipe for

Cheese Pie:

Beat half cup butter to cream. Half cup of milk may be added if not wanted too rich. Add yolks of 3 eggs and two-thirds cup sugar beaten to a froth, then 2 cups cottage cheese and stir all together briskly. Bake in one crust. When done spread over meringue made of the beaten whites of the eggs and three tablespoons powdered sugar, flavoring. Brown lightly in oven. This is a very good recipe.—Subscriber, Davis.

Coconut Custard Pie:

Here is one that sounds old fashioned in that it calls for four eggs:

Beat 3 whole eggs and one yolk until light. Add one-half teaspoon salt and two-thirds cup sugar and beat again. Add one cup grated coconut and two and a half cups milk. Mix all well together, turn into a deep pie plate lined with paste and bake until the custard is set. Beat the white of one egg until stiff, add one tablespoon sugar, beat well, spread on top of pie and bake in oven to delicate brown.

HINTS FROM HOUSEKEEPERS

Fig Leather

Wonder if anyone ever made fig leather (I call it)? I disliked to use my sugar so freely, so mashed up my figs as for jam, though no sugar, and spread it in thin layers on paper in my dryer. It's fine. Does not take so long as drying otherwise.—Nellie E. Crest.

Pear Syrup

Here is a very nice recipe for pear syrup, made from pears which are too ripe to can and still too good to waste, is delicious without a drop of sugar. Take pears too ripe for canning, wash and put in kettle, cover with water and let boil till well done, then strain

through bag. Put strained juice in saucepan and let boil about ten minutes. Then take it off the fire and put aside. To one gallon of boiled juice add 1 level teaspoon baking soda in 1 cup water (lukewarm). When dissolved put in with boiled juice. Be sure the pan the juice is in is large enough so that when soda is put in it won't overflow. As soon as scum rises take all scum off to clear syrup, then put it on to boil. Still be careful as the scum may rise while boiling, and again clean it off the syrup till pure and clean, then let boil steadily till in one-half hour test with spoon to see if it sticks to spoon and threads. Then it is done, but be sure it doesn't boil too much and be too thick, as it will change taste and not have such a nice flavor. When cooked to the right degree it is very sweet and rich, just what is wanted for table use. It may be late in the season to make or try the syrup, but if recipe is kept it will help someone next year. Once tried it will always be used.—Mrs L. Hagopian, Petaluma.

Mock Mincement

I am sending a recipe which I have never seen printed in Cultivator and which is not distinguishable from the old fashioned mincemeat when in the pie: 1 peck green tomatoes chopped fine. Drain, cover with water and boil once, drain, add same amount chopped apple, 2 teaspoons salt, 2 teaspoons cloves, 2 teaspoons cinnamon, 1 teaspoon nutmeg, sugar to taste (more spice if desired), 3 pounds raisins (or less according to taste), ½ cup vinegar, juice of one lemon. Cook until thick. It is good also made entirely without apples. When making the pies add one teaspoon butter or other shortening to each and ½ teaspoon salt. When making the mincemeat I also put in juice left from sweet pickles, also grape juice, or in fact any little odds I've had left over, such as blackberry juice, etc. Quince can be used in place of part apples.—Mrs Otis O. Carpenter, Earlimart.

WHAT you lose thru baking failure must be added to baking costs—it has to be paid for.

Calumet Baking Powder will save you all of that. Because when you use it—there are no failures—no losses. Every baking is sweet and palatable—and stays moist, tender and delicious to the last tasty bite.

That's a big saving—but that isn't all. You save when you buy Calumet and you save when you use it.

Pure in the can - Pure in the baking

CALUMET
BAKING POWDER
"BEST BY TEST"

It is reasonable in cost and possesses more than the ordinary leavening strength. You pay less and use less. You get the most in purity, dependability and wholesomeness.

In every way — it is the best way to keep down baking costs. That's what has made it the world's biggest selling baking powder — has kept it the favorite of millions of housewives for more than thirty years.

Pound can of Calumet contains full 16 oz. Some baking powders come in 12 oz. instead of 16 oz. cans. Be sure you get a pound when you want it.

Calumet Sunshine Cake Recipe

½ cup of butter,
1½ cups granulated sugar, 2½ cups flour, 1 cup water, 2 level teaspoons Calumet Baking Powder, 1 teaspoon lemon, yolks of 9 eggs. Then mix in the regular way.

Poultry Queries

Conducted by J. A. Koethen

Sick Turkeys

I have two tom turkeys about six months old which are ailing. They eat and drink, but not with any relish, and their heads are a dark red. They have free range, plenty of fresh water, scur milk daily and milo or grain feed. I have given one of them two doses of castor oil, but see no change.—Subscriber, Santa Ana.

This is just what happens to many turkeys that had been fed a little too heavily the first two or three months. At first they do well and there are no signs of disease. Finally the effects of overfeeding begin to show, and the dark head and lack of appetite show that the dreaded blackhead germ is developing. As your turkeys are so old and do not seem very sick as yet, you may be able to save them by giving a liver pill once a day for several

AMERICAN AGRICULTURE REPRESENTED AT ROME

Three of the delegates from the United States to the general assembly of the International Institute of Agriculture at Rome, November 3-15, were Dr. Thomas F. Hunt, dean of the college of agriculture of the University of California, permanent delegate; Leon M. Estabrook, statistician and chief of the bureau of crop estimates, and Harvey J. Sconce, former president of the Illinois Agricultural Association. Because of failure of congress to provide a specific appropriation for the payment of the expenses of the American representatives it has been necessary to delegate men who will be in Europe at the time on other business or who are willing to pay their own expenses. Dean Hunt, who was appointed permanent delegate to succeed David Lubin, is now in Europe on sabbatical leave from the university, and will reach Rome in time to take part in the meeting.

The International Institute of Agriculture was organized in 1905, through the assistance of King Victor Emmanuel III, at the instance of the late David Lubin of California, who had first tried to interest several other

POULTRYMAN'S CALENDAR—NOVEMBER, FEEDING FOR EGGS

From the time the pullets are six months of age a good laying mash should be kept before them constantly. The mash may be either bought prepared or mixed at home. For those who prefer to mix their own mash, this formula, which is recommended by the experiment station at Berkeley, is simple and good: Bran, 5 parts (by measure); middlings, 3 parts; corn meal, 1½ parts; soy bean meal, ¾ part; beef scrap, 1 part; bone meal, ½ part. With this should be used a mixture of at least two grains, one of which should, if possible, be wheat. This scratch grain is fed at night, about an hour before sunset, and a sufficient quantity should be fed to make sure that every pullet has a full crop, with a little left over in the litter for morning. A quart of grain a day for 15 hens is about the right amount, but no one can say exactly how much a hen should eat. Green feed is given sometimes in the middle of the forenoon, some times at noon. A moist mash, fed about 2 o'clock, is often useful in keeping up production in fall and winter. This is moistened with buttermilk or sour milk or one of the commercial milk preparations. An abundance of green feed is one of the best stimulants to egg production.

days and putting them on a diet of greens and clabbered milk with no grain at all except what they may pick up on range.

Soft Shells

I have a three year old R. I. Red hen that for six months has been laying soft shelled eggs. She has the same feed as the rest of the flock—grain, green, shell, table scraps—but is the only one that does not lay an egg with a good hard shell. As she is an excellent layer I would like to keep her.—Subscriber, Sherman.

The soft shells show that your hen is getting too fat, a very common trouble with old hens of the heavy breeds. If you can manage to reduce her by cutting out the grain feed, and if possible letting her run and forage for her living for a while, she may be profitable for another season, but as a rule these old hens will put on fat in spite of all one can do. I notice you are not feeding a mash. The table scraps may take its place for a while, but the chances are you are feeding more hard grain than is good. Better get one of the prepared mashes and keep it before your hens, meanwhile cutting down the amount of grain fed. The whole grain is the fattening portion of the ration and it is very easy to feed too much.

It is reported that the state highway commission will pave the plank road now connecting Holtville and Yuma.

countries in the project. Mr. Lubin conceived the idea of an international clearing house for crop and livestock statistics which would make available systematically, on the same dates for the entire world, information regarding the production, consumption, marketing and distribution of agricultural commodities. He was the permanent delegate of the United States to the institute from the time of its organization until his death in 1919.

The institute has a direct interest to American farmers, because the prices of American products are determined, to a considerable extent, by the relation between supply and demand which is world wide in its application. The price of bread and meat in this country is influenced to a considerable extent by the surplus or deficient production of bread grains and meat animals in many foreign countries as well as at home.

The general assembly meets every two years to review the work of the institute and to outline plans for the succeeding two years. The last meeting was held in May, 1913, the war having interrupted meetings since. The International Institute is maintained by contributions from 55 adherent countries, these contributions being proportionate to the part taken by each country in the activities of the institute. The United States and other countries of first rank contribute annually \$16,000 for its support.

In addition to the crop and livestock statistical service, the institute collects and publishes information with regard to trade in agricultural products and fertilizers, cooperation among farmers, wages and conditions of farm labor, rail and water transportation rates, credit, finance and exchange, and other economic factors affecting agriculture. In addition it issues a monthly review of progress in the science and practice of agriculture.

With \$40,000,000 invested by California farmers in tractors numbering one for every 700 acres of improved land in this state, with over 33,500 electric motors and 20,000 stationary gas and oil engines used on the farms, the California farmer uses more mechanical power per acre than any other farmer in the United States.

Superior Drills
Winona Wagons
Aspinwall Potato
Machinery
Knapp Orchard Disc
Plows

UNUSUAL success—such as that attained by the ALLWORK KEROSENE TRACTOR in California—implies unusual merit.

The answer is that—aside from being built especially to meet California conditions—the ALLWORK KEROSENE TRACTOR possesses a number of distinctive advantages. Burning kerosene spells economy is further carried out by the moderate first cost and exceptional stamina of the ALLWORK. When an abundance of reserve power is needed—the ALLWORK is there with the goods.

Never Before Has So Much Power
Been Built Into So Small a Tractor

With all its might, the ALLWORK is only fifty inches wide, fifty-four inches high, has a seventy-five inch wheel-base and turns in a nine-foot radius.

The complete enclosure and protection from dirt of all working parts are additional reasons for the ALLWORK'S unprecedented popularity. All gears and other working parts are run in oil.

Order your ALLWORK TRACTOR now, so that you will get the full benefit of its use during the coming season.

Citrus Markets
Los Angeles, November 3.
The citrus shipping year ended Sunday night, October 31. Practically all of the Valencias have gone forward, though there may be a dozen or 15 cars yet in Southern California. Northern and Central California will soon be shipping new crop Navels. Oroville, Butte County, will probably win first honors, expecting to ship its first car Saturday of this week, though Covina, Los Angeles County, claims credit for first car of new crop Navels, which went forward Saturday, October 30. This, however, is shipment of freak "off bloom" which resulted from a warm January spell. These shipments, of which there will be about 20 cars, are now going forward. Last year at this date there were still 2,200 cars of Valencias to go forward.

Shipments 1919-1920
Southern California: Oranges, 30,025; lemons, 8,733; total, 37,758. Last year: Oranges, 35,436; lemons, 9,441 total, 45,177. The year 1917-18: Oranges, 14,346; lemons, 6,197; total, 20,543.
Central California: Oranges, 5,391; lemon, 289; total, 5,680. Last year: Oranges, 3,737; lemons 264; total, 4,001. The year 1917-18: Oranges, 2,536; lemons, 115; total, 2,651.
Northern California: Oranges, 261; lemons, 23; total, 284. Last year: Oranges, 256; lemons, 5; total, 261. The year 1917-18: Oranges, 203.
This makes total shipments for all citrus fruits in California: Oranges, 35,445; lemons, 8,843; total, 44,288. Total for all citrus the year 1918-19: Oranges, 39,429; lemons, 10,010; total, 49,439. For the year 1917-18: All citrus, 23,397. 1916-17: All citrus, 54,504.

Shipments This Year
Shipments of citrus fruit to date since November 1, 1920, Southern California: Oranges, 14 cars; lemons 18; total, 32. To same date last season: Oranges, 213; lemons, 26; total, 249.

All tires are shipped in original wrappers, which assures you that there are no blemishes. In case we are out of sizes we reserve the right to refund money to any purchaser.

Letter Confirming This Extraordinary Purchase

PORTAGE TIRE & RUBBER COMPANY,
Akron, Ohio
San Francisco Branch

October 26th, 1920.

Mr. Max Livingston,
Los Angeles, Cal.

Confirming our telephone conversation of today and thanking you for the business which you have just seen fit to give us, will say that we are very busy in the office this afternoon making arrangements to get the shipment of tires on its way.

The tires that you have just bought are the standard first quality tires manufactured by the Portage Tire and Rubber Company, and our only reason for offering these tires at this exceptional discount is to make room for our new SKIDLOCK TIRE. This you will realize does not make what is generally known as a "factory second" out of our tires. The factory gave us permission to sell these tires with the understanding that we would brand them with a small second stamp over the serial number.

Yours very truly,
PORTAGE TIRE & RUBBER COMPANY,
By A. B. Chapman.

ABC-EBC

Now is the Time to Stock Up!

We are looking for good substantial people who appreciate good tires at the lowest prices yet offered. We would not offer these tires on time payments if we did not think it was safe to do so. You will like them and order more. Be sure to give sizes wanted and shipping instructions complete. Make all checks payable to MAX LIVINGSTON. Shipments will be made promptly.

Max Livingston
150 South Main St., Los Angeles, Cal.

Every Hen Advertises

THE hen that is fed on SURELAY advertises her appreciation by giving you a uniform, profitable egg-production. She is happy on her job—and she makes good! Just so, the hen that does not give you a uniform, profitable egg-production advertises her need for a balanced feed like SURELAY.

It's the whole story—there's no secret about it. Neither is there any secret about SURELAY—or what it will do. It is a clean, prime quality-feed that has stood the test of time—that has won the favor of countless hens and the faith of thousands of poultrymen.

SURELAY contains the exact ingredients your hens need to bring about the greatest egg-production in the most natural way. And these ingredients are balanced and blended more skillfully than can possibly be done by hand. There is nothing in SURELAY to throw your hens "off their feed." Our daily laboratory tests insure absolute cleanliness and uniformity day-in-and-day-out!

If you want to see why SURELAY has won a host of friends who advertise its profit-producing power—if you want to see how this uniform quality-feed "makes your hens pay by making them lay"—send for our booklet, "Makes Hens Happy."

One Dollar Yearly

The Dairyman's Opportunity

By R. P. Royce

HERE are many reasons why the present might prove a good time for the dairymen of this state to take a little time off and do some figuring on their business—take stock of their present operations and take a peep ahead a few years.

The dairy industry represents one of the most important industries of California, and in many ways we have reached a commanding place, but during the past few years it must be admitted that certain factors have developed that have tended to discourage the average producer. Generally speaking, it has been felt that dairying did not return the profit to the producer that he had a right to expect. In an effort to correct that state of affairs the industry has found it necessary to effect an organization that is primarily engaged in marketing problems. Though beset by a formidable array of interests that have sought to break down the organization, much headway has been made and there is promise that, if followed up, better conditions will be established in the marketing end of the business.

Broadly speaking, there are two main problems that confront the dairyman. One is the problem of marketing, the other is the problem of production. Of the two, it is difficult to state which is the greater, but the writer is inclined to place greater emphasis on production for the reason

that the marketing problem is limited in development by certain economic factors that simply will not down, whereas the problem of production need acknowledge no limitations except those established by the intelligent effort the producer brings to his business.

In other words, while the price of dairy products can be forced to higher levels, the price can only go to such a point as will be met by the consumer, for there can be no doubt that there is a price point where the consumer will cease to buy freely. We don't know exactly where that point is (during the last few years our ideas have been very materially revised), but we do know that the peak point of dairy products will be lowered along with peak points for other commodities. On the other hand, the cost of production can be lowered by the producer employing factors over which the consumer has no control.

Recognizing the above facts, and they must in the end be recognized, the profit of the producer will depend upon the margin between production costs and selling price—the wider the margin the greater the profit. The producer's big problem, then, is to keep lowering his production costs, and the man with the lowest production cost will be making the most

profit, regardless of what the selling price happens to be.

That the dairy industry is certain to face a readjustment along with other farm and factory products there can be no doubt, and while no one knows how soon or how great will come this readjustment, the dairyman who believes otherwise is just whistling in the dark and treading on unsafe ground.

The wise dairyman will therefore, while making his plans for the future, keep in mind that sooner or later his industry is due for a readjustment and make every effort to place himself in a position of strategy.

This can be accomplished most certainly through the use of better cows, and the problem of better cows begins and ends with pure bred. It begins with pure bred for the reason that only through the use of such well bred cattle can improvement operate, and it ends with pure bred for the reason that the possession of an entire pure bred herd should be the ultimate goal of all.

There is no question as to the value of pure bred dairy cattle, and right now we are having a striking demonstration of the value of better blood in the prices that are being paid for the better sort of grade cows. During the past few months grade values have

gone skyward until we are no longer impressed with prices ranging from \$200 up. Of course such prices are only being fetched by the better things—the inferior sorts are not wanted.

Now what has been the cause of new price levels being established for the better sort of grade cows? Why are dairymen willing to pay \$200, \$250, \$300, and in some cases more, for certain grade cows when other grades can be purchased for \$125 to \$150? Simply that the hard headed, practical dairymen know that there is a wide difference in the producing ability of cows and are willing to increase their investment in order to get the more economical producers. It's just sound business and nothing more.

Why do some cows produce more economically than others? There's only one answer; they are better bred. They are better through inheritance, and that inheritance has come from the use of pure bred bulls. And there you have the whole philosophy of the pure bred, and, strange as it may seem, we have seen "practical" dairymen prejudice themselves against pure bred and at the same time recognize quality in grade cattle, quality that only came from pure bred, to the extent of setting a premium on the better bred things.

The point of it all is this: If some grade cows are better than others because they carry more top crosses of

(Continued on Page 646.)

California Farm Bureau Egg Laying Contest

By W. J. Tocher

EARLY every Californian is familiar with cow testing associations and their work.

Every month the tester in charge makes his rounds and each individual in every herd is tested. The records are authentic and official. The motive of the whole work is to develop better dairy animals. Every year we see more and more of the poorer individuals going to the butcher. By eliminating the "boarders" the dairyman can give more of his time to breeding and developing his herd and to augmenting the satisfaction that goes with better stock.

In the poultry industry, as in dairying, the farmer has the "boarder" question on his hands. By various systems of culling—taking into account such points as capacity, constitutional vigor and time of moulting—the skillful poultryman can remove many of his poorer hens. But poultrymen are coming to agree that the only sure method of testing stock is by means of the trapnest. This is a simple device whereby the hen is trapped when she goes on the nest. Here she must remain until released and her leg band number taken. By this method the record of every individual hen is kept and at the end of the year there is no guessing as to her production. Miss Biddy has laid a certain number of eggs, and at so much a dozen her income is easily figured.

So the trapnest is coming into more general use. But what about official records? It is not practical for anyone to go from farm to farm and keep records of each hen. On the face of it the idea is not possible. But poultrymen want records that are official and of whose authentic value there is no question.

It is entirely possible for poultrymen to send their birds to a central location where they may be tested, and tested under identical conditions. Each individual has the same chance as every other. Housing, feeding and care in general are the same and records made are kept by a trained man whose interests are only those of manager. So what is known as the egg laying contest has come into being.

History of Egg Laying Contests

So far as can be learned from a fairly careful examination of the literature at hand, the Utility Poultry Club of England is a pioneer in the matter of holding poultry laying contests. In America we find the history of egg laying contests dating to 1911. The idea of the International Laying Contest at Storrs apparently originated in the office of the North American, a daily newspaper published in Philadelphia. This paper sought suitable supervision and a proper background if it was destined to win the

confidence of the poultry public. Thus it happened that the matter was brought to the attention of those in charge of the poultry work at Storrs (experiment station for Connecticut college of agriculture) and plans were perfected by which the first international laying contest in America was inaugurated on November 1, 1911, and terminated on October 31 of the following year. At about the same time (1911) we find that a contest was established at Mountain Grove, Missouri, through appropriation of funds by the legislature. We find records of contests conducted by state experiment stations at Pullman, Washington; Fayetteville, Arkansas; Lexington, Kentucky; Newark, Delaware; Vineland, New Jersey, and College Station, Texas.

California Contest

In 1918 a few poultrymen of Santa Cruz started a small local contest. Each entrant sent ten birds to the contest building, erected by popular subscription and by the businessmen of the town. Each owner's birds were kept in separate pens; no trapnesting was done. At the end of the year the record was a pen record. Some were very good, but still there was no comparison of the individuals.

In 1919 the Santa Cruz County farm bureau became interested in the work

through the local farm center, and took over the plant. A new house was built and a manager secured to assume charge of the California Farm Bureau Egg Laying Contest. Entries came from various parts of the state and when the contest opened on November 15, 34 different poultrymen had entered 12 of their best birds. The University of California poultry division was asked to supervise the work, which it did through its extension system, represented at Santa Cruz by Farm Adviser H. L. Washburn and Assistant Farm Adviser W. J. Tocher. The work of this department was advisory only. The funds were provided by businessmen and from the sale of eggs. Max Kortum, graduate of the farm school and a man of several years practical experience, was secured to manage the contest.

The contest is still in progress and some very creditable records have been made—records that compare favorably with those of any other contest. The following pen records are for ten hens for a period of 329 days: Bellows Bros., Lakeside, 1,980 eggs; D. B. Walls, Petaluma, 1,926; S. L. Gibson, Santa Cruz, 1,908; W. J. Neef, Santa Cruz, 1,888; Enterprise Ranch, Chino, 1,882. Leading individuals for the same period: D. B. Walls, Petaluma, 272 eggs; Enterprise Ranch, Chino, 241; A. M. Webb, Santa Cruz, 239; R. C. Gibson, Newhall, 237; H. Peck, Santa Cruz, 235.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

BETTER ROADS

More good roads are coming. The recent election resulted in a big majority for the recall of the four per cent bonds and issuance in their place of others bearing interest rate which will sell them in the present state of the money market. This will give the highway commission power to do work which has been held in abeyance because of lack of funds. Doubtless the commission has been taking advantage of the slowing up of construction work in making plans which will result within a very short time in extension of many miles of good roads. Very fortunately the labor situation will also somewhat advance the work. The board has already announced early resumption of work on the Ocean to Ocean Highway, which will mean relief for Colorado desert sections.

NEW ORANGES

An immense crop of Washington Navelis is just beginning to ripen. Florida fruit has been arriving in Eastern markets for some two or three weeks. It is said to be of very fair quality, but the state is laboring under the handicap of unscrupulous shippers sending much green stuff into market to get advantage of the very earliest prices. The state laws have been set aside, at least as to their most efficient enforcement. On the other hand, California shippers are

asking for more rigid enforcement of state laws and both color and sugar tests are desired. The state department of agriculture reports:

"Shippers of oranges and lemons in Tulare County and Southern California have requested official state inspection for the coming season. One of the largest independent orange distributors in the state in writing to Eastern agents and buyers states: 'All members of the American Fruit and Vegetable Shippers Association, and, I believe, most members of the Western Fruit Jobbers Association, have repeatedly urged the necessity of state or government inspection service at the shipping point to eradicate misunderstandings and controversies that arise in handling f. o. b. purchases. This greatly desired service is now available for the first time in California. Certificates as to the quality and condition of the products inspected are prima facie evidence in any court in the state and thus provide the shipper with a definite protection in case of attempted rejection or railroad claims, and similarly protect the buyer against the shipper billing orders and applying cars that fall below the requirements of the agreed upon conditions of the purchase, whether it be

will be located at Sacramento. The active work of the San Francisco office will be in charge of L. A. Strong, who is one of the thoroughgoing workers and has been deputy quarantine officer for several years. It is difficult to say whether the ocean ports or the railway gateways from the East are most important, but certain it is the railways, especially the railway mail service, present the greatest problem to our quarantine service.

BUY A BAG OF RICE

Here is an editorial written by Secretary R. C. Mason of the Rice Association of California. The rice growers find themselves in a serious situation, and if we, the Cultivator family, can all add a bit more rice to our daily menu it will materially aid in increasing the outlet for this product. Secretary Mason writes:

"The California rice industry is facing a serious marketing crisis and to date talk and more talk is about the only thing that has been accomplished to solve the problem of the

GROWERS ASSOCIATIONS TO MARKET THEIR OWN PRODUCTS

Fresno, November 9.—Special wire from Fruit Growers Convention:

The State Fruit Growers and Farmers Convention opened this morning with large attendance. Every speaker scheduled on the program was present. The theme of this first day was cooperation, and speakers representing a dozen of California's greatest cooperative marketing associations urged the necessity of correct marketing methods. The proposal to establish one great distribution and marketing association, with its own warehouses or centers in all large markets, was met with great enthusiasm, such distributor to be liberally capitalized and governed by existing cooperative associations.—C. B. M.

grade pack or condition of the goods at the time of shipment. We have agreed to pay to this inspection bureau \$250 to apply on our Tulare County business."

This inspection service is under the direction of F. W. Reed, and Mr. Reed is receiving fullest support of shipper and receiver.

STATE QUARANTINE

In the retirement of Frederick Maskew from the office of state quarantine official Director Hecke of the state department of agriculture has been confronted with the problem of finding a successor. The quarantine division has been reorganized and a new office created, or, rather, there has been a transfer of responsibilities from the director of the department to the quarantine division, and the office of chief quarantine officer of California has been created. To take the responsibilities of this office D. B. Mackie has been appointed.

Mr. Mackie comes from the ranks of economic entomologists and brings to the new office a wide experience ranging from the New England states to the Philippine Islands. He had most complete experience with the gypsy and brown-tailed moths in Massachusetts, later was with the scientific staff of the Smithsonian Institute, in 1908 entered the plant quarantine and pest control service in the Philippines, where he remained for ten years, then coming to California, where he became field entomologist of the state department of agriculture and collaborator with the federal department in dried fruit insect work. His practical experiments with control of insects of dried fruits have resulted in the perfection of the vacuum fumigation process which is now being used in a large commercial way, not only in all kinds of dried fruit handling but in the cotton industry. It has proven especially valuable in handling cotton seed brought to this state from other sections. Its value to the date industry is shown in another article in this issue.

Mr. Mackie took up the duties of the new office on November 1. He

growers and the millers. Decisive action is needed to save the industry. For several seasons past the rice growers of California have paid tremendous costs of production, but they have made profits because of their high markets. This season with even greater costs of production than ever before the growers are facing a declining market.

"The Louisiana and Texas rice crops will be large this year, and Burma, Saigon and Siam have large exportable surpluses, figuring into the millions of tons. The law of supply and demand is inexorable, and the California rice industry will suffer seriously unless something is done to increase the demand. The first relief must come from the home market. What we need is more buying of California rice by our own people. Here in our own Golden State we have a type of rice which is the finest cooking rice produced anywhere. The reason it is not more popular is because the consuming public is ignorant of the fact that it is superior to the long grain rices. The mellow sweet California rice meets with big demand wherever its qualities are understood. There is no rice superior in flavor to California rice properly cooked.

"We therefore appeal to the consumer to start something today to help the California rice industry. Buy a bag of rice. With the help of every consumer and grower the rice industry of California will be saved and there will be added to our daily diet an economical food which will bring health and strength to the entire family. For the preservation of the rice industry of California, buy a bag of rice."

EDITORIALETTES

"United, we stick; divided, we're stuck." This is the slogan of the Farmers National Congress and presumably will be set to good lively music at a meeting which is to be held next week at Columbus, Ohio. We are not fully informed as to all the ambitious of this congress, but certain it is they have chosen a great text which, we take it, will be used in various of the sermons or preachments of their convention. California cooperators are rapidly finding themselves in the matter of staying united. Even the federal government has tried to discourage some of the cooperative organizations, but, Glory be! we're still sticking.

A speaker once said, "Thank God for work. Men have never been a spineless race of creatures who shrank from effort. Since the beginning of civilization men have delighted in exertion of strength or faculties for the accomplishment of something." And it seems the greater the difficulties the harder we work and the more we accomplish. And look at the results in comfort and luxuries enjoyed by the human race in 1920!

Are farmers carrying sufficient fire insurance? Where they have had occasion to purchase a bill of lumber or of hardware during the last few months presumably they have been reminded, but the one who has not been in close contact with present day prices it may be well to remind that the cost of building has wonderfully increased and there may be a greater amount of money in implements, sheds and barns than the owner appreciates. In that case, he should call in the county mutual association to extend its protection over his buildings.

Oroville will hold her Orange and Olive Exposition this year on November 15, for the first time since 1914. In 1915 this celebration was omitted because of the Panama-Pacific Exposition. Then came the years of the war, but now in the fall of 1920 Oroville announces the biggest and best Orange and Olive Exposition and its yearly appearance hereafter. It will be a county wide celebration. There will be exhibits of all fruits, but, of course, oranges and olives will be featured. The farm bureau will make an especially large exhibit and will maintain rest room and information bureau where the visitor may learn as to productions and possibilities of Butte County. Oroville expects to entertain visitors from all over the county and the Sacramento Valley.

It may be we can make some money on flax. It seems there is no outlet for fiber in this state, but the demand for oil is greater than ever and at longer prices. A San Francisco mill has discontinued buying the seed, but we believe there is a market in Portland. This is a special crop and should not be undertaken by the smaller inexperienced farmer.

Stick to your Libertys. Of course, we mean Liberty bonds, but it may mean liberties later. They are coming up, and the time is not far away when they will be back at par.

The anti-alien ownership bill won by a most decided majority. The Japanese announce that they will contest it in the courts, and of course the courts are competent to test its validity. Whether the law stands the test is not so important as the fact that the agitation which has brought about the favorable vote for this measure has proved of wonderful educational value. People of the East have learned that there is a question confronting California above that of race prejudice. It is an economic question. Presumably this will be but the beginning of a long campaign which will educate not only Easterners but many on the Pacific Coast as to the true situation.

Answering the question, "What's the matter with America?" a writer has suggested, amongst other answers, "Too many diamonds and not enough alarm clocks; too much envy of results of hard work and too little desire to emulate it." We all have a natural desire for the independence which comes from possession of a sufficiency of worldly wealth, but there are few of us who are willing to pay the price. The vast number in this class will perhaps be more apparent as the months go by.

Down in the Land of Cotton, Dates and Onions

By C. B. Messenger

NOTE in the title we say "down." This word is chosen with full appreciation of its value, for the other day we attended an event scheduled as the "Lowest down event of its kind in history." In fact, the low down-ness of the location is capitalized by the "low down" inhabitants, who maintain that they have arranged the altitude and the climate and that they are proving a great asset.

It was to see the products of this community that a meeting of secretaries of chambers of commerce of Southern California was arranged. Now, chambers of commerce hardly have to do with the field covered by the Cultivator, that is, if we follow the line of thought suggested by the words "chamber of commerce." But in California it is different, and so long as it is different we wish these chambers of commerce would change their names to give a truer impression of their attitude toward our great productive industries. If the name were "chamber of commerce and of agriculture" we believe the organizations would prove truer to name and secure greater interest and greater support from those who are engaged in the agricultural industry which these chambers endeavor to encourage.

But to the story. The secretaries gathered in force last week, some by autos, some by train. All of the talk of all of the sessions had to do, not with commerce but with the agricultural productions of the great Coachella Valley. We say great, not with reference to size so much as to the wonderful quality and range—dates of higher quality than those of Algeria or Arabia, Bermuda onions superior to those of Bermuda, Durango cotton of quality better than the fiber produced in far older cotton growing sections, grapes and grapefruit, the earliness and sweetness of which are remarkable; early figs, and, in fact, nearly all of California's fruits produced at a season from a week to many weeks earlier than those fruits ripen in other portions of the state.

Taking advantage of the occasion when their fellow workers from other fields were there, the slogan of the Coachella Valley chamber was, "We—Want—a—Highway—From—Indio—to—Banning."

This valley was "discovered" only about a score of years ago. A part of the Colorado desert, its only value was considered to rest in the coating of salt over the sink at the lowest portion of the valley and a railway was laid in from the Southern Pacific, salt was scraped up and shipped out in trainloads. Later, someone discovered that a hole sunk into the "worthless" soils higher up the slope brought forth bubbling, pure water. The water on the soil proved so productive that the word was soon passed, and desert claims were staked out all the way from Palm Springs to down near the center of the "sea." Almost everything was planted at first and gradually crops of lesser worth were weeded out. Today the greatest industries of the section are culture of cotton, dates, onions and the other crops mentioned above.

In producing these crops little time was left for the construction of good roads, and during the last two or three years the state has been appealed to to extend its highway system to, or

rather through, the valley. The Ocean to Ocean highway traverses this valley. Still, with lack of ability to dispose of the highway bonds, to secure a route acceptable to all, and the right of way, the desired construction has been delayed. Since the election of November 2 one of these obstacles is about to be removed. Farther, the state commission has decided on a route following the Southern Pacific from Banning to Indio and the right of way is being secured as rapidly as possible, and we understand the long deferred hopes of Coachella and Imperial Valleys as to highway construction are to be realized. However, at the banquet, which was one feature of the event, these cards were at each place: "The people of Coachella Valley request your influence and assistance to 'speed up' the paving of the highway from Indio to Banning," and as the banquet followed a 70 mile all day drive over valley roads it is perhaps not necessary to suggest that the request met with heartiest response.

As a day's ride covered some 50 or 60 different producing ranches it is impossible to describe in detail. The government date gardens, one near Mecca, the oldest in the state, and the other above Indio, were both visited. The Mecca garden has proved a wonderful help in guiding settlers in their work of propagating and planting dates. These gardens are under the supervision of Bruce Drummond, who has been in charge of them for something over 15 years. The reason for the two gardens is that the original planting near Mecca was threatened at the time of the break in the levees of the Colorado when the Salton Sea covered not only the salt beds in the center but created a great inland sea more than 80 miles in length and more than 100 feet deep. Before the break was repaired the waters had risen within a short distance of the Mecca garden and many of the more valuable plants were removed farther up the slope nearly two miles above Indio.

More of Mr. Drummond's work and his success in hybridizing will be given in a later Cultivator.

The commercial side of date production is another story, but in a word, it was shown best at the packing house of the cooperative association of date growers. The dates are delivered at the house in shallow boxes or trays, and the first process consists of putting them into the vacuum fumigator. Several hundred pounds are placed in a great steel container, somewhat like a large steam boiler, and the electrically operated vacuum pump exhausts the air, or rather nearly all the air, for it has been found that the creation of an absolute vacuum causes a bursting of fruit cells and a less attractive product is secured than by exhausting to 26 or within two degrees of an absolute vacuum. Then the pump is stopped and the chamber filled with carbon bisulphide gas. This is the process invented by D. B. Mackie of the state horticultural commission and has been used successfully on many products. It has been shown that the eggs of insects in the interior of a bale of cotton are burst by the outward pressure of their own gases when placed in this vacuum.

Photographs taken by Cultivator camera. For description see last paragraph of this article.

Agricultural News Notes of the Pacific Coast

Northern California

Heavy shipments of onions are being sent from Sutter Basin to Cuba.

\$2,200 per acre is reported paid for a Lodi vineyard, no buildings on the place.

Extravagant prices are still reported for carloads of wine grapes purchased by Eastern buyers.

Heavy shipments of celery are now being made from the Walnut Grove and Antioch sections.

Farm Adviser Sullivan of Sutter County is arranging for a women's home canned fruit contest.

D. B. Mackie has been appointed chief quarantine officer for the state, succeeding Frederick Maskew.

Shipments of deciduous fruit from California this year are estimated by shipping companies at 35,500 carloads.

The first conference of high school agricultural instructors of Northern California is to be held some time this month.

A large acreage of barley is being planted in the Sutter Basin this fall, mostly to the new heavy yielding varieties.

Canneries of Sacramento County are said to be urging larger planting of canning plums, particularly Yellow Egg variety.

Sacramento and Placer County farm bureaus have decided to increase their annual dues to \$5.

Fruit growers of the Sonoma County farm bureau have formed a cooperative organization for dissemination of cultural information.

The fruit packing plant of the Zerrillo Packing Company at Healdsburg burned last week, together with a \$5,000 stock of fruit.

Eastern buyers of green grapes have found their purchases disappointing for home wine making, as the grapes did not contain sufficient sugar.

Some \$25,000 worth of California Bartlett pears have been condemned by the Boston board of health because of presence of poison spray on the skins.

Local meetings of the Butte County farm bureau will be held at Durham, November 15; Manzanita (Gridley), 16; directors' meeting, 17; Rio Bonita, 22; Gridley Colony, 24.

Favorable decision was rendered in the suit brought by the California Prune and Apricot Growers against a Napa County grower who after contracting had sold his crop to another party.

R. L. Nougaret of the viticultural division of the state department of agriculture says that California grape syrup was featured at the Cincinnati Beverage Exposition, November 8-13.

The first year of the operation of the Libby, McNeill and Libby cannery at Gridley shows output of 1,000,000 cans of peaches. Additions will be made to the plant before next canning season.

California grape men are beginning early to insist that more refrigerator cars are necessary to handle their crops properly. The ventilated box cars as a substitute this year were not generally considered satisfactory.

Central California

A new dehydrating plant for sweet potatoes will probably be installed at Turlock.

The Fresno County farm bureau held its annual picnic at Selma Park, October 30.

The Merced farm bureau has formed a grain department to handle marketing affairs.

The Kern County farm bureau has reelected all last year's officers. J. J. Duell is president.

The annual meeting and picnic of the Kern County farm bureau was attended by 600 people.

The Visalia plant of the California Cooperative Canneries will be equipped to make olive oil.

Clovis, Fresno County, is shipping two to three cars of raisins per day and the local packing house employs 70 men.

The newly organized olive association at Lindsay, Tulare County, reports the sale of 400 tons of olives. Picking has commenced.

The Sequoia National Park is now closed to visitors while the usual fall work of grading and making turnouts on the roads is being done.

At the last quarterly meeting of the Stanislaus County Farmers Union a resolution was adopted asking congress to put a tariff on almonds.

A record breaking crowd attended the joint picnic of the Merced and Stanislaus County farm bureaus at Livingston Bridge on October 30.

Damages to the extent of \$2,263,000 are claimed by the Tulare irrigation district against the Lindsay-Strathmore district, in legal papers recently filed.

The sawmill project being considered by the directors of the Tulare County farm bureau will come up for thorough discussion at the meeting held November 15.

Estimated increase of 20 per cent in shipments of Washington Navel oranges from Tulare County has been announced by the California Fruit Growers Exchange.

The Arizona American Cotton Growers Association expects to establish a branch at Bakersfield to care for the 27,000 acres of cotton grown in the San Joaquin Valley.

Fig growers in the San Joaquin Valley are up in arms over heavy fig importations. Last year White Adriatics sold for 15 cents a pound; this year five cents is the best offer.

Tulare County orchardists will ask for a law making it mandatory for every manufacturer of spray material to place on containers the full formula of the contents enclosed.

The sale of the Kounias herd of Holsteins at Modesto recently brought to the owner \$20,500. The top price, \$1,225, was paid for a six year old cow, Dominita Colantha De Kol 2d.

The California Peach Growers have contracted with the government for timber, to supply box materials, of about 60,000,000 feet, in addition to 10,000,000 feet from the Yosemite Company.

Farm home department meetings in Kern County are scheduled for November at Weed Patch, 16; Inyokern, 18; Kern Delta, 23; Beardsley, 24; Wasco, 25; Edison-Fairfax, 26.

Southern California

The new creamery at Escondido is now in full working order.

It is estimated that Imperial Valley will send out 40 carloads of grapefruit.

Rabbits are being imported from Australia to supply the markets of Los Angeles.

The Orange County farm bureau is considering raising dues to \$4 or \$5 a year.

The Escondido Citrus Union held its annual meeting and basket picnic November 1.

Hemet, Riverside County, will hold its second annual exhibit of "Arts and Crafts" December 2-5.

Some 250 cattlemen from Ventura and nearby counties attended the cattlemen's barbecue at Foster Park.

The El Sobrante Rancho near Elsinore is planning to set out several thousand carob trees for stock feed.

Imperial Valley's grapefruit is ripening fully a month ahead of last year's. Several shipments have already been sent out.

The Orange Belt Honey Producers at their recent annual meeting elected S. P. Nealey of Rialto and R. E. Fairchild of Redlands directors.

There is talk of establishing a community dehydrating plant at Nuevo, Riverside County, the plant to be the property of the farm bureau.

The San Jacinto city council is considering returning some municipal territory to Riverside County, as present boundaries include too much farm land.

Japanese of California have announced that they will start court action to enjoin the state against placing in effect the anti-Japanese program voted upon.

A New York visitor at Santa Paula, Ventura County, reports California walnuts on sale at retail stores at 50 cents a pound with no European nuts to be found.

The Hemet, Riverside County, chamber of commerce proposes a Hemet-Brawley highway that will shorten the Los Angeles-Brawley travel by 62 miles.

The \$600,000 dam across San Dimas Canyon, Los Angeles County, is now under construction and a new temporary city of bungalows and tents is rapidly building.

The California Lima Bean Growers Association reports no probable changes in November, carload lots standing at \$6.75 per hundred, but supply is getting lower.

General Manager Millsbaugh of the California Honey Producers Exchange announces that the "Sunni-Hunni" advertising campaign is already showing results in stronger demand.

Official apple picking under the association began in the Yucaipa Valley, San Bernardino County, October 13, with the exception of Oak Glen, which is at least a week later. Wine-sap and Rome Beauty are the two earliest.

Santa Paula has a new "bug house" with a capacity sufficient for hundreds of thousands of inmates—parasites of citrus insect pests. It belongs to the Santa Paula Citrus Association and is in charge of A. A. Brock, formerly horticultural commissioner.

The Coast and General

Alaska is demanding better roads and more of them.

It is expected that cotton fields of lower California will produce 70,000 bales.

Strawberry fields in Lewis County, Washington, are reported seriously infested with strawberry weevil.

In the first nine months of 1920 more than a million tons of phosphate were shipped from Tampa, Florida.

Florida has 1,384 dipping vats to help control cattle tick and 55,000 cattle were dipped during September.

The annual meeting of the Washington Horticultural Association will take place at Spokane, December 13-17.

Oregon prune growers estimate loss of 60 per cent of the value of their crop due to rains at harvesting season.

A new agricultural college for the Northwest is proposed to be established by the Presbyterian church at Yakima, Washington.

There is shortage of storage space for Yakima Valley, Washington, potato crop and much of it will have to be pitted on the farm.

The October precipitation of snow and rain about Flagstaff and Williams, Arizona, was the heaviest in years and the stockmen are jubilant.

In a recent test crop at the experiment station at Moro, Oregon, Triplet winter wheat gave the heaviest yield of the several varieties tried.

A cotton grower from the South, now in Butte County, states that many sections of California and probably farther north will produce good cotton.

A 45 acre loganberry field near Salem, Oregon, returned a gross income to its owner of more than \$1,000 an acre. Net return per pound was more than 13 cents.

Entries for the Pacific International Exposition at Portland show an average increase in all classes over last year of 60 per cent. The exposition is to be held November 13-20.

The first farm bureau booth ever shown in western Washington was displayed at the district fair, Puyallup, and attracted much attention, being filled with excellent soil products.

The federal forest reserve has announced that Nevada stockmen will be allowed grazing privileges in the Humboldt forest reserve as in 1920, but for a shorter season by 15 to 30 days.

At a meeting in Johannesburg the Chamber of Commerce of the United States of America in South Africa was organized. The purpose of the chamber of course is to extend American trade in that section.

Professor T. Harvey Johnston, from the University of Brisbane, Australia, is visiting California and hopes to receive aid as to the best means of controlling the prickly pear cactus pest, introduced from California.

"The Coast Packer" reports that a bright stranger on the Erie dock in New York took up his stand by a car of grapes and in fifteen minutes sold \$2,000 worth to a swarm of Italian buyers. While the buyers went after their trucks and push carts the stranger vanished with the money in his pocket and the real owner of the grapes had to do the explaining.

Dr. H. S. Reed on Citrus Pruning

By Ernest Branton

UNDER the auspices of the Orange County farm bureau, Farm Adviser Wahlberg presiding, a citrus school, with orchard demonstrations, was held at Anaheim, October 27-30. The lectures were given under a huge pepper tree on the W. R. Ward ranch. Dr. H. S. Reed spoke at the forenoon session of the 27th on lemon pruning and in the afternoon on orange pruning; saw and shears work following in near by orchards. The main points of the talks, as caught in copious longhand notes, were as follows:

"We prune lemon trees for crop and to shape correctly for permanent production. Trees will produce heavily for years without pruning and then need heavy surgery, but this is not the best way. Rational pruning should induce a good crop each and every year. Lemon trees naturally bear long upright shoots, with few laterals, but which branch on the end, bear

parable with those on deciduous trees recording annual growths. The lemon makes a growth, stops, the mere tip of the terminal seems to die but eventually resumes growth and a slight ring is formed where the tip apparently died.

Pruning

"Cut out the rankest growths only. Nip off terminals with thumb nail when 18 to 24 inches long. Cutting back to stubs of six inches, as often practiced, provokes large woody growths, not fruit. So cut back for elbows not less than 12 to 16 inches apart which compare favorably with the tree's best crop producing growth. Prune centers open so light may get in (not air, for there is always plenty of fresh air), and induce inside growth and inside fruit. Leaves cannot function except in light, so no fruit spurs can develop in congested centers; the twigs start but leaves soon fall off

Dr. Reed Talks and Prunes

Upper view, Dr. Reed and listeners under W. R. Ward's large pepper tree. Lower view, Dr. Reed about to prune a lemon tree. Farm Adviser Wahlberg on his left; C. T. Davis of Davis Brothers, owner of orchard, on his right.

fruits and subsequently arch over. Objections to these growths are that they swing about and bang fruit against everything in reach and may break if pulled down by heavy yields.

"Some pruners take off these shoots, but this will not build a large tree, so we must leave some for framework. We also need all the leaves we can save, for they manufacture organic food for building wood. Crude sap is nearly pure water with a small mineral content, but building material all comes from the leaves, so do not remove all so-called sucker wood. Moderately head back the chosen long shoots to make framework, but always head to a lateral, generally one leading outward. By this heading of length growth we force out laterals as the rapidly growing shoot steals sap from others and heading throws back and breaks flow so dormant buds below will develop. Arching throws only topside laterals but a headed shoot sends forth on all sides.

"There are some conditions peculiar to lemons. A framework of elbows is common, branches running up a distance and then making an elbow or set-off before resuming upward growth. But central growths make no elbows and bear little or no fruit. Somehow, we know not how, the natural elbows check sap flow and thereby produce fruit. Select your wood. Strong shoots of upright uninterrupted growth are not so good as those with slight rings showing seasonal growth, rings com-

and twig dies. The heaviest pruning should be done in the spring and but lightly at other times. Keep lower branches from actual contact with soil but allow them to hang low. Prune between growth cycles or when length growth has ceased and the tiny dead tips spoken of are to be seen. Lemons set now bring summer crop, when demand is strongest.

Pruning the Orange Tree

"Young orange trees make bushy tops for first year or two and afterward long weak growths in direction with the prevailing winds. Twice each year go over your orchards to train young trees. Too many branches come out at same point of main trunk and some of these, become nearly choked in after years. There is improper distribution; nurserymen should pay more attention to training. If they do not the orchardist should.

"Trees should be headed not less than 30 nor more than 36 inches high. Three to five leaders are enough and no two of these should issue at same height, but be evenly distributed around the trunk at four inches apart up the trunk. Do not allow 'cross over' limbs, for when the tree grows larger they will have to be removed, so do it when young and thus conserve energy. If new growths shoot up pinch off terminals, but if not done then wait until laterals start and

The Miskin Scraper

IS
THE BEST SCRAPER ON EARTH

And we can prove it. Write for circulars

The above is a cut of the Famous Miskin Scraper, which in operation, easy draft, greater capacity, and better work has many advantages over the common Fresno and wheel scrapers now on the market and is guaranteed to take twice the dirt per trip with the same horsepower.

Made in 2-horse, 3-horse and 4-horse sizes. Can be operated by small tractors from the tractor seat by the tractor driver.

Send for descriptive circulars, with prices or ask your dealer to send for one on approval. We pay the freight.

prune just above a good lateral while terminal is still growing.

"In older trees, those in bearing, a good rule is to prune moderately, never severely. Remove only wood that has ceased to produce—it is generally dead or nearly so. Remove real suckers or riders. Thin to let in light to centers, for the orange, if left to itself, becomes a dense tree. Do not prune an open top and allow inside limbs to sunburn on top side, but let in light, for new wood will not come to take place of old wood if light is insufficient. The aim should be to thin to let light in from sides, not from top. If top is opened and wood sunburns no new growth will start from the burned wood. Whitewash if too much exposed.

"After pruning, the tree should have

the same general outline as before but one should be able to see through the top. If suckers or riders come always remove before they get more than a foot or two long. If left they soon reach the top and branch freely, making an unwieldy, long handled umbrella. They are then robbing the tree at both ends, of sap supply below, and by overshadowing at top. Riders run up to three or four feet, branch out and fruit pulls them down on top of parent limb and the latter ceases to bear. On young trees leave lower branches as a curtain to protect the trunk, for sap flows more freely through delicate or tender bark and trees fruit most heavily near ground. Ideal soil for citrus trees is sandy loam for three feet and clayey loam beneath."

The Northern Citrus Belt

MEMBER of the Cultivator editorial staff recently visited the extensive holdings of the James Mills Orchards Corporation at Maxwell, Colusa County, and at Hamilton City, Glenn County. Though a thorough inspection was made, it was felt that in view of his extensive experience with citrus orchards in Riverside County, Mr. Mills should draw a comparison between the practices found necessary in the two widely separated regions and we give herewith the contents of a recent letter from Mr. Mills:

"We found that we had to immediately change from horse tools to tractor tools. At first there were no orchard tractors which were fit for our work, but at the present time we have an excellent equipment which handles our work in the best possible way. We have found it absolutely impracticable to handle the orchards in a satisfactory way with shallow cultivation and we are now working our land to a depth of eight inches.

"At first we decided to grow cover crops, but the natural vegetation was so rank that it crowded out our cover

what higher. We need more water here, particularly at Hamilton, than we did in the southern part of the state. Our soil is practically uniform in depth and of a fine silty loamy texture to approximately 18 feet where we have good water bearing gravel, and this soil does not hold the water as our soils in the south did. This is, of course, particularly due to the fact that the soils here are lacking in sufficient vegetable matter yet not poor in humus. I do not mean to imply that the soils of the south held the water because they were rich in vegetable matter, where as a matter of fact in most cases they held the water because the water did not have a tendency to run through them, due to the nature of the subsoil. Here we have no sub-soil which is in any way impervious to water.

"To more rapidly increase the humus content of our soil we planted alfalfa in several of our orchards. With the equipment we had it was impossible for us to keep the alfalfa from crowding in toward the trees and while the alfalfa was in the orchard the trees did not make a growth equal to the growth on our other plantings. We consequently plowed it under. At the present time the orchards in which the alfalfa was planted are making by far the largest growth, and more interesting yet we have only had to irrigate them every six weeks to two months, while the other orchards have required a thorough irrigation at least every month to five weeks. This was not true before so we can only attribute the change to the very large amount of vegetable matter which we have incorporated in the soil.

"Another big factor which we have had to combat is the factor of winds. This trouble, of course, was experienced by all the early farmers in the south when the Santa Ana swept over the Riverside country. We planted windbreaks, as you saw when you were here, and we have also planted interplants. We planted interplants for two reasons. One reason naturally was to get as large an income from the orchard planting at as early a date as possible, and the other was to reduce the winds. In one plot of 17 acres, in which we have apricots planted, we have so modified the pruning of the apricots that the branches of the apricot trees almost meet over the top of the oranges. On a very windy day one may stand in the apricot orchard and the wind will hardly move a hair on the head. Consequently, we have been able to get 100 per cent larger yield of fruit on the orange trees interplanted in the apricots than we have on any of our other plantings, and better yet practically all of the oranges would market as inside fruit. They are as smooth as glass and practically not scarred by winds. The same applies to some of our lemon plantings at the other ranch, in which we have interplanted almonds. The interplants have hindered our cultivation work somewhat, but with the small orchard tractors which we now have it is quite practical to carry on our cross cultivation in a very efficient manner.

"As to the actual handling of our trees, the only thing in which we differ from the south is in the fact that throughout the growing season we get a very heavy succulent growth, par-

Apricots and Oranges

Mr. Mills stands in front of an orange tree two-thirds as large as the apricot behind. The two are barely distinguishable. Both are four years old, a phenomenal growth.

crops, and so we gave them up. In the winter the natural cover crops consist of burr clover which stands well above the knees, and oats, barley and other weeds which stand well over the shoulders. One of our biggest problems has been turning under this very rank growth in the spring. We need an immense amount of equipment, for no sooner do we turn it under than it is up again. The only way to hold it down is to continually cultivate for the first two or three months in the spring. The soil is gradually becoming more friable and it is taking less equipment to handle each unit than it did formerly.

"All of our water in the Hamilton unit is supplied from wells. That on the Maxwell unit is from the old S. V. I. Company canal. The water in the Hamilton district stands normally at 18 feet below the surface and our eight-inch pumps set at water level are operating under a 24 to 26 inch vacuum which you can readily see does not mean much of a lift. At Maxwell we are lifting the water as high as 325 feet from the main canal and our power charge will run some-

ticularly in the center of the trees. At the Maxwell ranch this year we have suckered the lemons four times and some of them we are now suckering for the fifth time. On the Hamilton orchard we have run over our orchard three times, but really should have gone over the fourth time. Trees which we opened up this spring had put out so many water sprouts inside of six weeks that it would be hard even to shove your hand through them. By continually taking off the rank growth, however, we were able to throw the vitality of the tree into fruiting wood and into good body branches.

"Our growing season is somewhat different from that in the south. Our trees go absolutely dormant in the winter time. In very long seasons we get as high as four distinct growths during the growing period. This year, however, we have had but three. The first consisting of a fine fruiting wood growth; the second of a rank growth of so-called secondary wood, and the third of a fine fruiting wood. This, of course, does not apply to the water sprouts, for they seem to grow all the time. Undoubtedly the fact that our trees go so dormant in the winter accounts for the fact that we have had no frost damage

to speak of. We did have a little one year when we stimulated some of the trees in alfalfa by a late irrigation. Our winter season gradually comes on us and during the period of the year when the frosts occur our minimum and maximum temperatures do not vary often more than 20 to 25 degrees.

"The biggest problem of all has been that of the June drop on the oranges and the loss of crop on our lemons, due to the drying north winds. We believe we have this difficulty solved and the end of next year will tell whether or not experiments which we have been carrying on have been based upon a thorough knowledge of the conditions. Last year we made a very heavy application of fertilizer, largely nitrogenous. We felt that our winters and springs were so cold that we got very little bacterial action and hence a small amount of food made available in the soil for the early growth of our citrus trees and for the setting of our fruit. The nitrogenous fertilizer applied gave us a much stronger fruiting wood growth and undoubtedly set 100 per cent larger crop than we had set on our young trees heretofore. We have that end of the matter settled, but we have also the drop which is occasioned by the hot drying winds which we get, and the hot days. The temperature of the hot days, by the way, does not exceed the temperature of the hot days which we experienced in the south. Our temperature runs from three to four degrees under the Red Bluff temperature, throughout the summer, and approximately the same in the winter. By comparing Riverside temperatures to those of Red Bluff, you will see about how the weather conditions check up with those in the south.

"In order to solve the problem of this drop which is occasioned by the hot days and hot winds, we have had to come to the old question of summer shade crops. Next year we are going to plant our entire orchards at Hamilton and some of our planting at Maxwell with Whip-poor-will cow peas and black-eyed beans. We are confident that this will give us the same results as it has given in so many places in the south.

When they have done their duty we will plow them under and so increase our humus content. We are confident this practice will both hold the fruit on our citrus trees and cut down the summer injury on our deciduous trees, caused by the dust and the two spotted mite. The severity of our mite and red spider infestation seems to travel in proportion to the amount of dust flying. We are fixing our roads to cut down the dust and we know the shade crop will also help.

"As to the exact acreage on the Maxwell ranch, we have 300 acres of lemons planted in 1912, and 425 acres most of which was planted in 1913. We also have a small pomelo and Valencia orange planting which approximates our total of citrus on that ranch to 789 acres. At the Hamilton ranch we have 330 acres of oranges, all of them Navels, and 10 acres of pomelos. We have a very few Valencias planted here and there and every year they have borne tremendously heavy crops of excellent fruit. It might be well in the future to plant out the Valencias. Another factor which enters, which I failed to remark upon, is that of the time of the ripening of the fruit. Heretofore we have commenced our picking operations on about November 10. This year we expect to start it between the 15th and 20th.

"We have about 500 acres in prunes; 300 in pears; a large planting of almonds; a small planting of apricots. The apricots we find to be a very excellent and profitable crop to grow in this northern section. You saw our trees and noted their excellence and their marvelous growth in the short term since planting. They have produced for us the third year after planting—that is the third year coming four-year-old, \$100 per acre gross, and the following year, which was last year, nearly double that sum. We look for splendid returns from our deciduous plantings. We have also got a planting of olives. We will have, as well, when our grafting is completed next spring, considerable planting of walnuts, the English walnut on the black walnut indigenous to California. We expect to plant quite largely to apricots in the near future on both properties."

PEAR BLIGHT

If you intend planting pears, you will want to know all about PYRUS USURIENSIS, the new Asiatic pear stock, by aid of which 75% of blight peril may be eliminated and orchards doubled in value without increase of planting cost.

Can be supplied by no other Pacific Coast nursery this season. Sold under guarantee to refund price if blight-killed within TEN YEARS. For particulars, write

Strawberry Culture

Strawberries thrive best on rather light soil. The roots are fine and silky and do not easily push into resistant soils. The roots also remain near the surface so that frequent irrigations are necessary and the soil should not cake or bake after irrigation. Of course vigorous plants will become matted vines by midsummer and so shade the soil, water furrows included. For reasons plainly evident the lay of the land should be nearly level.

We are going to quote figures obtained through a visit to a ranch where several acres were set out more than a year ago, fields that have proven profitable and are second to none we know. The fields are within 20 miles of Los Angeles. The figures are liberal but not overstated. The land was fairly fertilized and plowed, but the fertilizer should have been not less than four times as much as was applied. One cannot fill the soil too full of humus or food and therefore a heavy application of stable manure, plowed and re-plowed into the soil, is especially recommended.

The plants were placed on the level, not on ridges as practiced by some. Plowing, marketing, etc., cost \$10 an

acre. The rows were three feet apart and the plants same distance in row. This requires 4,840 to the acre. If Carolina are used, as on place mentioned, the cost will be \$96.80, or \$20 a thousand. Other varieties cost less. It required five people one day, at \$4, to plant an acre, or \$20. Planted about November 1, the cost until February of the second year, or 14 months, was \$200 an acre. This makes approximately \$320 an acre for the "long" year. All labor had to be picked up as best it could. Of course a man of family could lighten this cost materially, as children could do much of the work. As an offset to this expense of \$320, there was a sale of strawberries that came to about \$500, so that the first year returned a net profit of \$180 an acre. The owner estimates the present and coming years will yield an income of \$1,000 an acre. This is not guesswork; figures are based on what has been accomplished to date. The question of varieties is one for self determination in all parts of the state. Find out what does best in your section and plant that sort. The new Carolina was the favorite of eight kinds tried on the ranch in question. The Gibson was second choice.

Irrigation of Prune Orchards

By Leonard H. Day, Commissioner of Horticulture, San Benito County

OBSERVATIONS and study of the conditions of orchards in Hollister Valley the past few years have developed unquestionably the fact that three irrigations per year is almost imperative in mature prune orchards. Possibly in years of heavy rainfall one irrigation about the first week of July and another immediately after the crop is harvested would be sufficient, but under the average rainfall of about 13 inches two irrigations before the crop is harvested are highly desirable. While it is true that we can actually grow and make good returns on prune orchards without irrigation, yet the results are far less remunerative and the trees are apt to sunburn and decline at an earlier age than irrigated trees. The trade is now demanding larger prunes and is willing to pay fancy prices; the orchardist must spare no expense to secure size. Increase in size may double or treble the tonnage of fruit per acre.

Many of the prune orchards in the past have suffered from lack of moisture either on account of too few applications of water or plowsole conditions which prevented penetration of water. In such cases the fruit is small and the leaves fall off prematurely, sometimes before the crop is harvested. These trees come out the following spring with small yellowish leaves at the ends of the twigs. Several years of such distress has caused a great deal of sunburn and dieback in many orchards. Some orchards in which the soil conditions have been improved by deep plowing to break up the plowsole, followed by more copious irrigation, have outgrown this dieback condition in two or three years by this better treatment.

The following is an instance of some investigations which I have conducted with orchards which had been irrigated regularly once each spring and which were for several years losing their leaves before the fruit was ready to harvest. On the 28th day of April, 1919 an orchard belonging to Carl L. Ladd was given a heavy irrigation which penetrated to a depth of about seven feet. Following this the soil was kept in good tilth to prevent surface evaporation. About the 15th of July it was noticed that the terminal growth of these trees seemed to stop growing. A moisture determination showed that the moisture content of this soil was getting near to the wilting point for prune foliage; by the 15th of August the leaves were turning pale and dropping badly, and the fruit was small. This indicated that another irrigation was needed early in July, and Mr. Ladd developed a pumping plant to take care of this situation. This orchard was irrigated on October 1, 1919, and in the spring of

1920, on May 5, and again on July 1. At the present writing (September 1, 1920), the fruit now being harvested is of excellent size and quality and the foliage in good condition. Analysis shows the moisture content of the soil to be well above the wilting point.

Only in recent years have we begun to realize that some varieties of trees will have their roots badly injured by dry soils during the fall, and during winters of light rainfall. This past winter the total precipitation was only nine inches, and this so scattering that no deep penetration resulted. In the spring many prune orchards came out with small and yellowish foliage on the ends of the twigs, and with more or less dieback in the tops. This same condition has been noticed during many previous winters of light rainfall and also in prune trees that suffered for moisture throughout the fall months.

Experiments and studies by the agricultural experiment station have shown that fall irrigation destroys many of the thrips which hibernate in the soil, and that a winter cover crop, if not plowed under until the bloom is out, will usually prevent thrips from emerging from the soil early enough to do serious damage to the bloom. Analysis of many of our soils indicates that in most of the orchards decayed vegetable matter is lacking in sufficient quantities for best results, from both the plant food consideration and mellowness of soil. The successful growing of a winter cover crop for plowing under in the spring depends entirely upon an early start, so that a double purpose is served by an irrigation immediately after the crop is off. Another important consideration is that the red spider does not develop so rapidly upon prune foliage which is kept vigorous by sufficient irrigation.

The recommendation of this office, based upon the foregoing considerations, is that in mature prune orchards we irrigate first in April, second, early in July, and third within a few days after the last prune is picked from the ground. Following each irrigation the soil, as soon as dry enough, should be thoroughly worked into a deep dust mulch to prevent loss of surface moisture through evaporation. During the spring and summer, between irrigations, it is well to cultivate about every three weeks to maintain the dust mulch.

The April irrigation will help decompose the winter cover crop, which had previously been plowed under. The winter cover crop should be drilled, or sowed and harrowed into the moist soil beneath a thin dust mulch created by proper tools following the fall irrigation.

FIGHTING PEACH TREE BORER

The results of what is known as the para-dichlorobenzene treatment for the eradication of the peach tree borer led experts of the United States department of agriculture to believe that a practical means has finally been found of ridding orchards of this disastrously destructive pest. Previously the only effective method of fighting the borer was by removing the soil around the base of the tree and digging the grubs out of their galleries with a knife. It is estimated that the borers have done \$6,000,000 damage a year and that \$2,000,000 a year has been spent in fighting them.

The para-dichlorobenzene method was first used extensively by orchardists in 1919. It consists in sprinkling fine crystals of the insecticide on the soil around the base of the infected tree and covering with earth to hold the gas. The substance is highly volatile and forms gas when the soil is between 74 degrees and 80 degrees Fahrenheit. This gas in five times heavier than air and sinks down through the soil. It is highly effective against the borer; and a pound of the insecticide, costing not more than 25 cents, is sufficient for eight or ten trees. The labor is scarcely one-third of that formerly required. The saving therefore is great.

This year the para-dichlorobenzene process has been used extensively in the Georgia peach belt, some localities buying as high as 50,000 pounds and large individual growers as high as two tons each. Growers declare that it is one of the greatest accomplishments in the history of the department, comparable to the self-boiled lime-sulphur treatment for control of brown rot and scab of the peach.

WATER SUPPLY IN ANTELOPE VALLEY

Antelope Valley, in the southwestern part of the Mojave desert, is one of the valleys that have become important agricultural districts by irrigation from mountain streams or wells. In connection with the rapid development of this valley applications have been made to the Federal Land Bank at Berkeley for loans. In arid regions the value of the land depends largely upon the permanency of the supply of water for irrigation. In some regions where the water is obtained from wells the supply has been seriously depleted by too heavy pumping. Hence the land bank applied to the department of the interior for information in regard to the source and permanency of the water supply of Antelope Valley.

In 1911 the geological survey published a report on the ground water in Antelope Valley by H. R. Johnson (Water Supply Paper 278), which showed that the valley had by no means reached the limit of development of its ground water supply, but warned the water users against the erroneous assumption that the supply is inexhaustible. Since that time considerable development has been made in the valley and it seemed advisable to make a field investigation of the present conditions. Accordingly, David G. Thompson of the United States geological survey made a study of the conditions in the valley in the winter of 1919-20, and has prepared a report entitled "Available Supply of Ground Water in Antelope Valley, Calif., with Notes on Recent Developments." In this report he estimates that about 12,000 acres is now irrigated in the valley and that the limit of safe development has not yet been reached. He shows, however, that the available supply is definitely limited and is certainly not more than sufficient to irrigate two or three times as much land as is at present under irrigation, and that consequently the greater part of the 500,000 acres of arable land in the valley must remain uncultivated because of insufficient water.

The report will be published as a water supply paper of the geological survey, but it will not be ready for distribution for several months. In order that it may be made public without delay advance typewritten copies have been deposited with the Federal Land Bank of Berkeley, the secretary of the Antelope Valley National Farm Loan Association, Lancaster, and the branch office of the United States geological survey, 602 Federal Building, Los Angeles, where they may be con-

sulted by any persons who are interested in the region.

ALFALFA WEEVIL THREATENS CALIFORNIA

Recent advices, followed by appropriate quarantine measures, to insure California against an invasion by the dreaded alfalfa weevil should serve to place the state immediately upon the defensive. The California department of agriculture directs the immediate attention of the alfalfa producing industry to this menacing evil and asks that precautions be redoubled to circumvent any possible inroad by this pest in California. So far this state has been spared the immense losses caused by this insect elsewhere, and thanks to the wholesome aid through the Western plant quarantine board in adjacent states, the danger to a certain degree is lessened. However, a serious prospect is disclosed when we consider this latest rapid advance by the alfalfa weevil toward the California border, necessitating quarantining Washoe County Nevada, only 20 miles from the California line.

THE only pruner made that cuts from both sides of the limb and does not bruise the bark. Made in all styles and sizes. All shears delivered free to your door. Write for circular and prices.

Extra parts are always available without delay for standard advertised machinery. This class always found in the California Cultivator.

Would \$100 a week interest you?

Wouldn't you like to have an income that would enable you to live independently—or own a business of your own? Thousands of men have lifted themselves to positions of big pay, simply because they fitted themselves for the jobs that were to be filled. They secured training under the "Modern" system.

Don't Wish for Success—Command It!

You can, easily, like thousands of others have done, get that specialized training that spells success. The man who *knows* is always in demand. Your previous education does not count. The future is all before you. What you do with it is squarely up to you. You must prepare now.

LEARN—Auto and Tractor Tire Vulcanizing
Oxy-Acetylene Welding
Airplane Course—engines, flying, and ignition

Look at the garages on every corner—watch the streams of automotive vehicles in the streets! See the trucks and Tractors displacing the horse on the farms. Realize that every one of these gas-propelled machines means work for several men at high wages, in operation and repair.

Let the MODERN AUTO & TRACTOR SCHOOLS, Inc., Train You With Their Special System. The "Modern" System is the New Way—No Other System Like It!

We have given thousands of students that specialized training that started them on the way to success. We can do the same for you. Our courses teach you, in a few weeks time, the things you need to command big money.

Note: During the War this was the only School of its kind outside the State of Missouri approved and employed by the United States Government for the training of soldier mechanics. The Same School and Equipment is Now Open to You.

Write for our big, free, 100-page illustrated catalog, "America's Largest Trade School System." It has opened the door to success for thousands. It will interest and benefit you. Clip the coupon in the corner, send it to us, and the catalog will come to you by return mail.

While You Remember Cut the Coupon and Send It to Us.

Four Schools to Attend—Free Transfers to All

MODERN AUTOMOBILE & TRACTOR SCHOOLS, Inc.

711 GOLDEN GATE AVENUE, SAN FRANCISCO

Tire Vulcanizing

We teach the most thorough and practical course in the United States. Retreading, repairing cord and fabric tires, and tube work. Latest moulds and system. We cure our own rubber in our school. No other method as good.

ENGINE TESTING

Auto and Tractor Course

We offer the most thorough Auto and Tractor course known. Course includes engine-building and testing, transmission and differential setting, driving, battery and magneto ignition, starters and generators. We trained hundreds for the United States Government. Let us train you. Be an expert.

OXY-ACETYLENE WELDING

We teach the only thorough and practical welding course of its kind in the United States. Course includes pre-heating and special features for experts offered by no other institution. Finest welding plants in the world.

AVIATION

We have the largest and finest equipped aviation school and field in the world. \$100,000.00 worth of airplane engines just purchased from United States Government. 12-cylinder Liberties, rotaries, all kinds. No other school has the same equipment. Ask for special Airplane folder.

Oranges \$1.00 Each!

No, but Avocado growers are getting that price, constantly, for Avocados,—often more. There is a market now and will be for a long time for all the Avocados that can be produced. The trees yield prolifically and come quickly into bearing, yielding luscious, rich, tasteful, nutritious fruit that has a heavy food value.

Fruit taken from one Avocado tree near Los Angeles this year sold for over \$1,800.00.

Why not plant Avocados, one tree or an orchard? You can plant any time now. It will pay you to do so, and pay quickly. Buyers of the fruit are besieging those who have Avocados to sell so there is no marketing problem. There isn't anything you can plant in your yard that will produce both evergreen shade and fruit of high quality, so soon as an Avocado, nor for which you will receive an equal monetary return. Any one can grow the trees in any soil. Nearly every one eats and likes the fruit, and the number of consumers is increasing faster than the supply.

Several standard varieties fruit as young as two years and one may, by planting a tree each of three or four good varieties, have ripe fruit every week in the year.

For standard budded Avocado trees of the best varieties, grown under the most approved conditions as to location and culture, in open field (not weakened by being potted or grown under lath) write to the oldest exclusive Avocado Nursery in the state. Addressing

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Peach Scab

What causes black spots on side of peaches which I send?—Subscriber, Arcadia.

This is a case of peach scab (*Cladisporium carpophyllum*). It is so aggravated on these specimens that one entire side of some of the peaches is affected. There is no remedy once it becomes apparent on the peach. Preventive treatment in the winter or early spring will control. Spraying with Bordeaux or lime-sulphur is sufficient. In fact, if the treatment is given to prevent curl leaf it is effective with this pest also. Some prefer to spray in early December or as soon as the trees are entirely dormant with lime-sulphur, then spray while trees are still dormant before blooming with 5-5-50 Bordeaux. If, however, the spraying is not done while trees are dormant, spraying with 3-5-50 strength of Bordeaux after trees have bloomed is beneficial, but not so effective.

Beet Pulp

Will you please give a short description of the process of extracting syrup from the beets. Is the pulp subjected to heat, and is it chemically treated? If so, with what, and what is the temperature? This query is relative to the by-product "dried beet pulp" as cattle feed and the relative loss of food value over the fresh beets. It seems from recent experiments that heating (above certain temperature) robs vegetable feed of valuable mineral elements, etc.—Subscriber, Covina.

The beets are washed, shredded, carried to diffusion batteries where steam and water extract the sugar which is separated from the pulp. It is then sent to the carbonators, filter presses, vacuum pans and centrifugals. After leaving the diffusion batteries the pulp is usually carried to the drier and prepared for stock feed. All factories, however, are not supplied with the drier and the pulp goes to the silo and is sold to the stock feeder who is fortunate enough to be near the factory. Regarding dried beet pulp Henry's "Feeds and Feeding" says: "Owing to the high prices for concentrates and the favor with which dried beet pulp has been received by stockmen, many factories have been equipped with facilities for thus preserving the pulp. Shaw of the Michigan station found that dried beet pulp compared favorably with corn meal for fattening sheep and steers. It produced larger gains with growing animals, while corn meal put on more rapid gains with fattening animals nearing the finishing period. In the Scandinavian feed unit system the value of dried beet pulp for dairy cows is rated ten per cent below corn or barley. As dried beet pulp absorbs a great deal of water, when a heavy allowance is fed it is advisable to moisten it with two or three times its weight of water before feeding. Though moistened dried beet pulp may be employed as a substitute for corn silage, at the usual prices the latter is the more economical form of succulence for those who can raise most of their own feed. Breeders of pure bred dairy stock recommend dried beet pulp for cows on official test which are receiving heavy concentrate allowances, as it has a tendency to keep the bowels open and is not apt to cause digestive disturbances."

Nitrogen Nodules

Enclosed are roots of cow pea. Are the lumps nitrogen nodules or nematodes or both? I plan to grow a cover crop of barley on the land this winter. Would it be profitable to grow sweet potatoes on this land next summer?—Subscriber, El Cajon.

Nitrogen nodules more than an eighth of an inch in diameter were present. They are easily told for they hang free from the root while nematodes cause a swelling of the root

proper. It is difficult, on account of dryness of material sent, to say if nematodes were present, for one must find a nematode before being sure of its presence. If subscriber will send fresh material, in moss or other moist medium, we will be able to determine. Barley is a good intermediate crop in nematode control and we would not hesitate to plant sweet potatoes following unless nematodes are present in large numbers. Control is all we can reasonably expect for it is doubtful if a field once infested with nematodes ever becomes wholly free. Some growths on root sent appeared suspiciously like swellings caused by nematodes but dry condition precluded definite determination.

Grafting Walnuts

Would you kindly tell me when to transplant one year old black walnut trees that were started from seed from hard shell black walnuts and when and how to graft them onto English walnuts? What kind of English walnuts are the best?—Subscriber, Modesto.

The best time to transplant the nuts is soon after their sprouting in the field bed, when they may be placed directly in the nursery row. They are allowed to make one summer's growth in the nursery row and are then grafted in February or March or at least before growth starts in the spring.

Bur Clover for Cover Crop

Will you please tell me the value of bur clover as a cover crop, if it would be advisable for a walnut orchard, and where it can be obtained?—Subscriber, Whittier.

If bur clover comes up naturally, as it does in many sections, we would surely encourage it and allow it to cover the ground, but Melilotus and vetch have both proven rather more satisfactory as tonnage producers and because of the greater ease with which they are turned under. At one time bur clover seed could be obtained of any seedman advertising in the Cultivator, but more recently it has been difficult to secure.

Cheese from Goat's Milk

Have bought some goats and have been trying to get definite instructions for making a first class commercial goat milk cheese. Have all the bulletins, but they do not seem to treat on the ordinary commercial cheeses. As I understand it "Neufchatel" as described in California bulletin No. 285 is a soft cheese that spoils in a short time.—Subscriber, Orland.

This question was referred to Prof. C. L. Roadhouse of the state university and he writes:

"Reply concerning the making of cheese from goats' milk has been delayed to secure some further information from goat dairies that have been manufacturing cheese during the last few months. We have published a circular on Neufchatel cheese from goats milk, but you state that your inquirer does not desire information on making this type of cheese. We believe, however, that this is the best type of cheese that can be made from goats milk. There are two other types of goat cheese which have been made and sold by goat raisers in this state; one is the Cheddar type of cheese, which is somewhat softer than Cheddar and which has been manufactured by one or two people in the state. One lady, Mrs. L. P. Lommel of Napa, has manufactured a cheese which resembles brick or limburger cheese in consistency. She is making an attempt now to market this cheese in a special container. I believe that the goat industry would do better to market its product in the form of milk wherever it is possible. We recognize goats milk as being very useful, particularly in infant feeding, but it has no special advantages for use in the manufacture of butter or cheese; though it is possible to make these products from goats milk. I know of no one at present who is making the hard type of cheese in California from goats milk and marketing it in any considerable quantity. Summing up

this subject, I believe that goats milk sold fresh or made into Neufchatel cheese places the goat product in the most marketable form, and in these productions it has the greatest palatability and demand."

Pomegranates

Please give me information regarding the pomegranate, climatic conditions, culture, etc., required, also best varieties, and will the varieties have to be mixed for pollination?—Subscriber, Barstow.

The pomegranate is peculiarly suited to the arid regions of California and Arizona; in humid climates the fruit is not so good. Nevertheless a good supply of water is needed to produce a commercial crop. Any easily worked soil with good drainage will do. Monthly irrigations and cultivations are amply sufficient, but do not irrigate later than the end of August. Prune to thin and build a framework for a tree 15 or more feet high. You may propagate freely from hardwood cuttings. Pick fruits before rain falls on them or they may split. Pick-

Save Money—Buy Pipe From Us

Farmers, Miners, Builders—people in every kind of business are saving money buying used or renewed pipe from us. We sell every kind of pipe. Send in a list of your requirements today and get our prices. We have saved hundreds of people 33 1/3 to 50 per cent on their pipe bills. Here's a partial list of some of the miles of pipe we have in stock for immediate delivery:

8,000 ft. 6 inch Riveted 16 Gauge
700 ft. 8 inch Riveted 16 Gauge
5,000 ft. 12 inch Riveted 12 Gauge
1,000 ft. 18 inch Riveted 12 Gauge
800 ft. 22 inch Riveted 14 Gauge
300 ft. 24 inch Riveted 14 Gauge
500 ft. 36 inch Riveted 12 Gauge
10,000 ft. light wrought iron 8 inch pipe with cast iron collars.

All above pipe thoroughly overhauled and inspected and ready for immediate use.

We also have large quantity standard pipe and screw casing, pressure tested and guaranteed.

Don't delay—write for our prices on your pipe requirements today.

ing usually begins about October 1. Cut stems; do not pull off the fruits. Wonderful and Papershell are the two best varieties and both self fertile. Write to University of California, Berkeley, for bulletin (276) issued in 1917, entitled "The Pomegranate," by R. W. Hodgson.

Pumpkin Seeds and Onions

What is the best way to save pumpkin and squash seed in commercial quantities? When is the proper time to plant onion bulbs to raise seed in San Fernando Valley?—Subscriber, Van Nuys.

We presume you wish to use or sell seeds for feeding purposes. If to sell for planting you will have to commence program back of seed saving. No reputable seedsman will buy seed without seeing the crop maturing, no matter what claims are made for it or by whom. He must know for himself. As to actual cleaning, place the seeds in a barrel, without water, and leave until pulp rots, which should take place in three days. Then fill barrel one-third full of seeds, fill up with water, stir up and pulp will float and may be poured off, leaving clean seeds below. Dry seeds on screen or canvas not touching ground, so air can circulate beneath. Never dry on boards as sun will burn them and impair value for seed purposes. Stir twice or more each day until they no longer stick together; otherwise they will mildew when sacked. Onions, to mature seed by May—the best selling time—should be planted in September or October. Some plant last of August; it is doubtless now too late.—E. B.

Eradicating Bermuda

Answering query as to method of getting rid of Bermuda grass, in the Cultivator of October 23, we said:

"The best method of getting rid of Bermuda is that of plowing and cultivation. This is a good time of the year to kill the stuff, as Bermuda does not like cold weather and is almost dormant these cool days, so that cuttings do not root so readily as in the warmer spring months. Bermuda is very easily eradicated by constant cultivation. Of course if one had begun earlier, before summer, by growing a clean culture crop, the problem of eradication would have solved itself. However, we think continuation of the plowing and winter cultivation will bring results, but if it does not, then the expense next summer of giving the clean culture crop could be met by planting beans or other cover crop which will give compensation and at the same time aid in eradicating the pest."

Commenting on this, L. B. Joralmón of Los Angeles writes:

"I am a constant reader of the bulletins of the state as well as those issued by the department of agriculture and I have been a careful reader of the Cultivator for a great many years. I have noticed that the department and your paper have advocated the planting of clean cultivated crops like beans on Bermuda grass land, but I have found from actual experience that this is not a satisfactory way of eradicating the Bermuda grass. In the cultivation of beans and similar crops, the moisture is kept quite close to the surface of the ground just below the dust mulch, which allows the Bermuda grass to feed on the moist ground and it grows very much faster and spreads more rapidly than if the following method is used: We plant our Bermuda grass land to barley or oats as early as possible in the winter and cut same for hay as soon as possible in the spring. As soon as the hay is removed from the field we plow land shallow dry and leave the roots of the grass exposed as much as possible to the sun and heat for about 30 days. We then harrow Bermuda grass out to the surface and burn most of it and cross disk and replot land late in the fall deeper than the original plowing. Most of these operations are done in the hottest part of the season and we find that most of the moisture is taken out by the first crop of barley hay, and two years of this kind of treatment put the land in splendid shape. The method advocated in your article does not work in any case so far as we have observed. Would like to have further discussions regarding this important subject."

The Ideal Fertilizer For California Soil

COTTONSEED MEAL is a particularly valuable fertilizer for use on California soils. Its nitrogen content is far more readily transformed into nitrate than higher nitrogenous fertilizers and the fat and moisture content is extremely low.

Large quantities have been used yearly in the Southern States with highly gratifying results. And now, with the rapid development of cotton culture in California, Cottonseed Meal becomes readily available to you at prices which make it the cheapest of high-grade fertilizers.

Average Analysis of Cottonseed Meal:

Nitrogen6 per cent to 6½ per cent
Phosphoric Acid3 per cent to 4 per cent
Potash2 per cent to 2½ per cent
Moisture7 per cent to 8 per cent
Fat6 per cent to 7 per cent

Cottonseed Meal is clean, easily handled, and will not deteriorate. Packed in 100-pound bags.

Write for sample and prices.

The most efficient Tractor in America

Why the Reputation of the Bates Steel Mule for Durability?

THERE is a larger proportion of steel and hardened working parts used in the construction of the Bates Steel Mule than probably in any other tractor manufactured in America today.

The powerful motor and rugged transmission of the Bates Steel Mule are put together as a unit power plant that cannot be racked or twisted by any action of the rough ground over which the machine must travel.

The two oscillating Crawlers attached to the solid power plant are independently flexible to conform to the rough surface of the ground. This practically eliminates all internal strains and greatly contributes to the long life of the working parts.

All rotating parts of the Bates Steel Mule, with the exception of those in the motor, run on nickel steel Roller Bearings, eliminating practically all friction and wear.

Bates Crawler Shoes have hardened steel parts and are 100% oversize—that's why they last for years.

The front wheels make easy steering and comfortable riding.

If you are not acquainted with the Bates Steel Mule dealer in your territory, write direct to factory.

Grafting Pear on Apple

Could you secure for me reliable information from some commissioner or nurseryman regarding his success in grafting pear onto apple? I know that the two will grow together, but as to making a successful bearing tree or not—that's the point. I have some ten year old apple trees of Rome Beauty and Winesap that I would like to convert into a pear orchard as the apple would be free from blight.—Subscriber, Yucaipa.

This was referred to A. L. Wisker of Grass Valley, who writes:

It is an old and accepted belief among nurserymen that the pear makes an unsatisfactory union with the apple, and that the belief is well grounded is indicated by the fact that no horticultural authority has ever recommended the practice, so far as I can learn, while the contrary advice is frequently given. Three objections are raised: first, that the union is short lived, particularly when top working is practiced, it being claimed that the grafts break away at the union; second, that the pear bears light crops when worked on old apple trees; third, that, owing to lack of affinity between the two species, the apple root does not properly supply the pear top with plant foods in proper proportions, and an under nourished, stunted tree results. I know of exceptions to these three general propositions but believe there is ample evidence in support of them all. Coming now to personal observation, in the orchard of Everett Francis at Colfax there are a few old apple trees that were grafted to Bartlett pears more than ten years since. The union appears to be good. Trees have made less vigorous growth than standard pear trees close at hand. A medium crop is the almost invariable rule. The fruit is usually larger than on standard trees. Apparently it does not differ in any other way from other fruit in the same orchard. In the orchard of Derk Vinkemulder, adjoining, Bartletts were grafted on old apple trees about four years since. The work was skillfully done and the unions have not shown weakness thus far, but the trees have an under nourished, stunted look. A few pears have been produced during the past two years but the behavior of the trees does not promise fruitfulness and Mr. Vinkemulder will graft no more of his apples, although it had been his intention to thus top work about 100. Grafting the pear upon the apple would in no sense reduce the tendency of the former to blight, save in so far as this practice tended to decrease the vigor of the pear. It is a well known principle of pear blight control that retarding the naturally vigorous growth of the pear tends to render the tree much less susceptible to pear blight. I advise your correspondent not to graft his trees to pears but to either take them out entirely and plant pears or graft them to some apple variety that is reasonably successful in his climate. Think Delicious would be satisfactory. It does well in this county among the orange trees.

Measuring Haystack

Please print a rule for measuring hay in the stack. How many cubic feet in a ton of settled alfalfa?—Subscriber, Turlock.

Here is a rule given by Henry Nelson of Chico, who writes that he has found it accurate under all circumstances: From the "over" subtract the width and divide the remainder by two, which will give the height that the stack would be were it flattened down so as to be shaped like a brick. This is always true, no matter how tall the stack nor how wide. Having ascertained the height, width and length of the stack, it only remains to multiply together the three dimensions and divide by the number of cubic feet in a ton. For example: Suppose you have a stack 20 feet wide, 60 feet over and 50 feet long. 60—20 equals 40 divided by 2 equals 20. You have now a stack shaped like a brick. Multiplying its dimensions, we have 20x20x50 equals 20,000 cubic feet; 20,000 divided by 512 equals 39.14 tons." As to volume of ton of alfalfa hay, Ten Eyck of the Kansas agricultural experiment station says: "With alfalfa hay which has been stacked for 30 days it is usual to compute 512 cubic feet as a ton; when the hay has been stacked five or six

months, 422; in old, fully settled stacks, 343; sometimes in very large stacks or mows, only 216.

Yellow Jackets—Bees

An inquirer asks how to prevent yellow jackets from molesting honey bees. The question was referred to T. O. Andrews, inspector of apiaries for Riverside County, who writes:

"The question is new to me, as I never had a colony overpowered by yellow jackets, but sometimes mud-daughters get into hives after the bees become reduced by disease or queenless, but rarely in numbers sufficient to destroy the bees."

Information re Citrus Culture

Where may I get information on the culture of orange and lemon trees?—Subscriber, Los Altos.

The best place is in the orchard of the practical grower who gives attention to up to date cultural methods. The next place, perhaps, is in one's own orchard with such help as may be given by papers like the California Cultivator, which is always ready to submit questions to those qualified to answer. Another source of information is such books as "Citrus Fruit," by Coit, and "Citrus Fruits and Their Culture," by Hume. The latter is published by Orange Judd Co. and Dr Coit's book by the Macmillans. An excellent source of information also is "Citrus Fruits," issued by the R. M. Teague Nurseries at San Dimas.

Protecting Vines from Rabbits

How can I prevent rabbits from spoiling young grape vines? Is there a spray which will repel?—Subscriber, Kingsburg.

There is no satisfactory spray or treatment equal to that of fencing with rabbit tight wire. However, that is fearfully expensive. The trunks of trees have been very effectively protected by smearing them with bacon grease which, if rancid, is all the better, but if the intention is to protect the young growth of the vines no such treatment could be effective. Lime-sulphur spray is not attractive to the pests, but is not a very efficient protection. The best protection would be combination with neighbors so as to reduce the pest either through hunting with dogs and guns or through making a regular rabbit drive. Poisoning with watermelon rind is fairly effective at this time of the year, providing there is dearth of other green feed.

Long Pruning

If subscriber at Pasadena requesting information as to long pruning had given name we would have been glad to send information requested.

Field Mice Destroying Pea Seed

How can we keep the field mice away from our sweet pea seed? The seeds we dipped in Paris Green did not sprout. Do you know of any poison we can dip them in that will not harm the seed?—Subscriber, Santa Barbara.

We question whether any dip or treatment could be given the seed so as to save it from the mice without danger of injury to the germ, but would suggest planting with the seed a sufficient quantity of poisoned grain which might still save the seed. As a preventive use thorough and deep cultivation to destroy their hiding places and complete removal of rubbish piles, weeds or other hiding places in field adjacent. Still better, encourage the natural enemies of these mice. One of the most beneficial of these is the ordinary gopher snake. The California farmer often fails to appreciate the value of snakes and he continues to bruise his heel on its head. This is a serious mistake, for every gopher snake is worth dollars. So far as the mice are concerned other enemies are coyotes, wildcats, foxes, badgers, raccoons, opossums, skunks, weasels, and perhaps better than all, the domestic cat. Hawks and owls should likewise be encouraged. The U. S. department of agriculture at Washington, D. C., has issued Farmers Bul-

let in No. 670, "Field Mice as Farm and Orchard Pests," which may be had for the asking. Another publication issued by the department is Bulletin No. 31, "An Economic Study of Field Mice," by David E. Lantz of the biological survey.

Legal Queries

Louis B. Stanton, attorney 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Pumping Plant Included

I have a mortgage upon an orchard with pumping plant, consisting of well and electric motor. The pumping plant is not mentioned in the mortgage. The mortgage is a year past due and not paid. What right have I to the pumping plant in case I have to foreclose?—Subscriber, San Diego.

Your mortgage doubtless provides that the premises, together with all appurtenances, are mortgaged for the security of the payment of the obligation. The pumping plant undoubtedly will be included within the term of "appurtenances," as it would doubtless be essential to the carrying on of the orchard. Any attempt to remove the motor could be doubtless restrained.

No Right of Way

One man gives to his neighbor verbal permission to go through his barn lot, in doing which it is necessary to open and close two gates. This has continued for a period of more than five years. The licensee now claims that his neighbor cannot close the gates by reason of his having acquired a right of way. Is this correct?—Subscriber, Gilroy.

In the first instance the favor given was merely a matter of license clearly indicated by the placing of the gates and the closing thereof. In the second instance the licensee has apparently made no claim of a right in opposition to the interest of the owner of the property until the present time and apparently can make no claim other than by the verbal permission. It is necessary, to acquire right of way such as this, that the right be claimed for the period of five years or more openly and notoriously and not under any permission. The gates can, therefore, be undoubtedly closed and forever barred.

Husband's Estate

If husband dies without will or children, does the wife receive the whole of the estate?—Subscriber, Los Angeles.

This answer can be given only as of the date of writing prior to November 2, 1920. At this date, in the case specified, in case of community property one-half goes to the wife, the other half descending according to the rule applicable to separate property. The rule applicable to separate property provides that in such event the estate goes one-half to the surviving wife and the other half to the decedent's father and mother in equal shares, and if either is dead the whole thereof to the other. If both are dead, then said half goes to the brothers and sisters and descendants of deceased brothers and sisters.

NOVEMBER FLOWERS FOR SOUTHERN ARIZONA

By M. E. Bemis

ACTIVITIES in the flower garden need not cease with cooler weather, in fact, this is just the season to prepare for the spring and early summer flowers which help to make the home surroundings cheerful and perhaps help more than we realize to make all within the home more contented and happier.

Plantings may be made of calendula, candytuft, carnations, centaurea, clarkia, coreopsis, cosmos, daisies, Globe amaranth, gaillardia, hollyhock, larkspur, mignonette, nicotiana, nigella, pansy, petunia, phlox, poppies, stocks and best of all Spencer sweet peas.

Many of these will do little more than make a good root growth ready for the warm spring days, but the fall and winter plantings are well worth while. Poppies grow here if given even half a chance, both the California and the old fashioned double poppies. Pansies do splendidly, but plantings now will of course mean later flowers than those planted earlier. Common and Spencer sweet peas may still be planted, but it is a little late for the Christmas flowering.

This is the season for planting out bulbs and a considerable variety offers a choice which should suit all. The list for November planting includes hyacinths, tulips, daffodils, paper white narcissus, Chinese lily, freesia, Spanish iris, Calla lily, amaryllis, anemone, crocus, oxalis and ranunculus.

Hyacinths come in a variety of colors. They all come rather high. Most of these are imported, and the larger bulbs are the best, that is, they produce the largest flowers. Bulbs should be planted five to seven inches apart

and with the tip five inches below the surface. Heavy soil should be lightened by adding sand or mulch.

Tulips should be planted with the tip about four inches below the surface. The small flowering varieties do not do so well. The early may be had in a variety of colors, the double in pink, light pink and reddish bronze. Darwin tulips come in a variety of colors. Some seed houses put up collections of mixed tulips which gives one a variety and at about the same cost as the prices of single varieties by the dozen. Daffodils, both double and single, are old fashioned flowers which, like the old songs, are ever new. They should be planted about the same as hyacinths.

Paper White narcissus bulbs may be planted any time during the winter and either indoors or out. Planting in bowls, placing in a dark room and then bringing out after four to six weeks, gives a wealth of flowers at a comparatively small cost. Gladiolus may usually be planted in places where it is not too cold after November 15. They should not freeze. In

climates like Phoenix there would be little danger of freezing at any time during the winter sufficient to do any harm.

The amaryllis is a pretty flower which does well in Arizona, but like the hyacinth it is rather expensive. It comes in soft pink, velvety crimson and mixed shades. Calla lilies may here be grown out of doors. Freesias and oxalis offer attractive flowers from bulbs at comparatively small cost and with so little trouble to grow that any front yard should be considered incomplete without a few.

LILIES

In addition to our native lilies, *L. tigrinum* and *L. Humboldtii*, there are a number of others which may be planted this month, such as *L. Speciosum album* and *rubrum*, *L. auratum*, *L. Harrisii*, *Easter Lily*, *L. giganteum*, *L. elegans*, *L. Formosum* and *L. candidum*. One of the latest recent introductions is *L. regale*, which is very fine. All these like rich soil and will repay careful attention. The bulbs increase from year to year.

Do You Know—

that over ninety per cent of the farmers who own trucks report that their greatest advantage is that they save *time*?

STANDARD PRACTICE

The use of Timken Tapered Roller Bearings at points of hard service in the great majority of automotive vehicles is proof of leadership established on the tapered principle of design, quality of manufacture, performance on the road, and service to the automotive industry.

that the overwhelming majority of truck-owning farmers run their trucks from one year's end to another without losing a single day for repairs?

that Timken Tapered Roller Bearings are engineered into trucks for the purpose of making such performances possible?

that the *adjustability* of Timkens' is one of exclusive features that make sure that the Timkenized truck can be kept constantly at work, season after season?

Light Weight Farm Engines

Cushman Engines, recognized everywhere as The Original Light Weight Power, give dependable, economical service on every power job on the farm. Cushman Engines weigh only 40 to 65 pounds per horsepower. The Cushman owner saves valuable time, because he can easily move his engine to the job, instead of hauling the job to the engine.

More Power Per Pound

Cushman Engines weigh only one-third to one-fourth as much as ordinary engines, and they run much more quietly and steadily. Better design, better materials and better workmanship give the Cushman more power per pound. Equipped with Throttling Governor, Carburetor, Friction Clutch Pulley and Water Circulating Pump without extra charge. Send for Free Book on Light Weight Engines.

Harvest 20 to 45 Bushel to Acre Wheat in WESTERN CANADA

Think what that means to you in good hard dollars with the great demand for wheat at high prices. Many farmers in Western Canada have paid for their land from a single crop. The same success may still be yours, for you can buy on easy terms.

Farm Land at \$15 to \$30 an Acre

located near thriving towns, good markets, railways—land of a kind which grows 20 to 45 bushels of wheat to the acre. Good grazing lands at low prices convenient to your grain farm enable you to reap the profits from stock raising and dairying.

Learn the Facts About Western Canada

—low taxation (none on improvements), healthful climate, good schools, churches, pleasant social relationships, a prosperous and industrious people.

GILBERT ROCHE

3-5 First St., Sheldon Block San Francisco, Cal.

Canadian Government Agent.

we went through miles of grape vines on each side of the highway.

Mr. Evans has but 20 acres, ten in bearing, five of young vines and five in buildings, home orchard, etc. But the ten producing acres are a revelation in grapes. They have been planted but five years, yet single vines hang heavy with at least \$3 worth of grapes each. He has contracted the present crop for 15 cents a pound and the yield is not less than two tons to the acre. That returns \$600 per acre or \$6,000 from ten acres planted five years ago. The district in general will yield about a ton or little more to the acre.

Planting the Vineyard

The soil is first leveled to grade and plowed eight or nine inches deep; it is of a soft, yielding sandy type. The plowing is done during the first ten days of February and the planting during the last week in the same month or the first week in March. The rooted vines are purchased from the nurseries as Mr. Evans says that is much cheaper than rooting them at home. As soon as vines are planted they are irrigated, to settle the soil about them as much as for the moisture lodged in the soil. They receive two more irrigations during the first summer. No pruning and no suckering is done the first season.

The second spring the best and most upright cane is cut to two buds and tied to a stake. These stakes alternate in length, being four and five feet long respectively and are driven 16 inches into the soil, one at every vine. It is believed the lower wire needs a support at each vine on account of the great weight it has to carry. But the upper wire needs support about one-half as much, hence the alternating heights. In these days of high lumber prices this effects quite a saving. When the growth is eight or ten inches high one shoot is tied to stake and the others rubbed off. This shoot is carried up the stake 24 inches and the terminal pinched off. Keep all shoots but not leaves off each upright cane to a foot above the ground throughout the season. During the summer three irrigations are given. So endeth the second chapter.

The Third Year

Two wires are strung on the posts, the lower 24 inches above the ground and the other on top of the five foot stakes, or about 18 inches above the lower one. The vines are then tied to the bottom wire. On vigorous growths two canes are left 18 to 24 inches long and two or three spurs two buds long. On less vigorous growths leave no canes, but two or three spurs of two buds each. For the third season three irrigations are given and this is the permanent practice.

Nothing has so far been said about cultivation but the methods are simple and alike for each year. Mr. Evans plows away from vines each spring with a single plow and two horses, seven or eight inches deep, and leaves furrows open until after first irrigation. After each irrigation he plows back with a vineyard gang plow, about four inches deep. This leaves the soil level and smooth as this soil is never lumpy. The picking usually runs from about August 25 to September 5, but is set by the sugar content, and the latter is dependent on the weather. Picking is done by contract, based on trays which hold on an average 22 pounds each. The grapes are dried in the vineyard where picked and hauled to nearest association packing house which in this case is at Biola. Vineyardists do not haul their own raisins as they can get the work done for \$1.75 a ton and boxes returned. The long waits sometimes experienced at the packing house are exasperating to a busy farmer.

While at Mr. Evans' we saw some interesting tests for sugar content. He has a "sugar meter" (saccharometer) and tests grape juice free for neighbors who call. The test is of course based on specific gravity at 60 degrees of heat. Two lots came in Mason jars. These were poured (separately of course) into the testing tube or phial and the meter placed in the juice. It is just like any large glass tube thermometer. It dances up and down in the grape juice and when it stops is read. The grapes from young vines test higher than from old vines. The sample from the latter

was 19 and from the young vines 21. As both samples tested 80 for temperature, two-thirds of a degree was added for the excess of 20 degrees over the meter standard. They should not be picked until they test over 23 per cent sugar for if they are the owner loses in weight. Mr. Evans said the 21 per cent grapes would be ready to pick in a week if weather was normal; if hot, in lesser time. Thus endeth the story of raisins from Thompson Seedless grapes.

DOWN IN THE LAND OF COTTON, DATES AND ONIONS

(Continued from Page 629.)

After refilling the chamber with air a couple of times in order to remove all effects of the gas, the dates pass over the polisher, usually consisting of Turkish toweling on a steep incline or in the interior of a large cylinder. From the polisher they go to the grader, where girls separate them into grades. From the grader they go to the maturator, or ripening room. This is a room maintained at 100 to 110 degrees. The length of time of remaining in this room depends upon the condition of the fruit when harvested. This year's cool weather has deferred ripening and some loss and considerable inconvenience has been the result.

Following this maturing process they are again hand sorted and the choicest fruit goes into cartons from 12 ounces to five pounds. A second grade is also put up and lower grade fruits are shredded, pitted and packed in 25 or 50 pound containers.

Secretary Cardwell of the Coachella chamber of commerce put in many a strenuous hour in preparing for the entertainment of the visitors. One feature, especially informing, was the placing on a big card at the entrance of each station of the journey the number of the station. Then on the program giving route of the "pilgrimage" these numbers gave information regarding the production of the ranch and other notable points. A breakfast of quail with plenty of dates on the side was furnished to delegates by the Ladies Aid. The girls of the high school served luncheon and the Ladies Aid again catered at the banquet. Coachella people certainly gave most cordial welcome to all visitors.

The upper picture shows the date packing house at Coachella. It is a thoroughly up to date building with every comfort for the employes and every equipment for efficient handling of commercial dates. The second from the top is a scene in the Risher date garden. This was formerly the Northup place. The second photo from the bottom shows one of the patriarchs of the valley, a Deglet Nur which has been a record breaker. It is in the government gardens at Mecca down near the Salton Sea. In fact, these gardens were so close to the sea during the time of the break in the levees that many of the more valuable plants were moved several miles up the valley above Indio. A pile of cotton seed is shown in the bottom picture. In the background is a partial view of the cotton gin at Coachella.

FARMERS NATIONAL CONGRESS

The Farmers National Congress will hold its 40th annual session at Columbus, Ohio, November 16-19, 1920. The farmer, farm press, Grange, farm bureau, Farmers Union, cooperative associations, agricultural colleges, extension workers, experiment stations, state and national departments of agriculture are asked to help make this congress a worth while meeting. Students of America's rural conditions will help this congress to invoice the needs of rural America and point the way to relief and remedy.

Potato growers of the United States are paying \$15,000,000 a year for Paris green and other arsenicals to protect their potatoes from the Colorado potato beetle. This does not include the labor involved in the application or the immense loss in yield caused by this beetle. It has been found in nearly all the Western states except California. We must keep it out.

Potato Growers Field Day

By Ernest Braunton

HOW best to grow potatoes in the south end of the state was clearly brought out at the potato growers field meet in various parts of the San Fernando Valley on November 4. And these are the points upon which all agree: Soil should be light, of good drainage, full of humus, deeply plowed, well pulverized and firmed. It should be uniformly moist, almost wet, when potatoes are planted, and a uniform moist condition should be maintained throughout the growing season. Deep cultivation should be practiced early in the season and lighter stirring later. Plant certified seed if possible and practice close seed selection and rogue thoroughly. Good seed is half the crop. Alternate with cover crops every year, preferably with melilotus or vetch or a mixture of the two. All these points were emphasized again and again by the speakers, from the government potato experts to the expert and practical growers.

The meet was held under the direction of the Los Angeles County farm bureau and was first called to order on the Oleson ranch near Van Nuys by B. C. Bougher, field crop specialist of the farm adviser's staff. Mr. Bougher is a newcomer, filling a newly made office. He is a graduate of "Ames," Iowa, has lately been farm adviser to Humboldt County, traveled considerably, having lately made a trip of investigation to Hawaii. He stated the audience would be shown the practical effects of seed selection, cover crops, alfalfa in particular, irrigation to overcome early autumn frosts.

In the field he introduced J. L. Oleson, owner, who said the two chief problems now before the successful grower were seed selection and marketing. He has used leguminous cover crops, barley, and Texas red oats. In one field the predominating rate of yield was 100 to 170 sacks, but the portion previously cropped to a mixture of vetch and yellow melilot yielded 212 sacks to the acre. If sown

now or earlier, vetch makes immediate growth, but melilot will not grow until warm weather, so the two gave a rare combination of growth until June. Alfalfa one and a half years old, cut twice and left on the ground and finally turned under, was not so good as clover or vetch as it is much more fibrous and is slow to decompose or break up, and potato crop following is not so good. Field may have too much undecomposed material and may lack potash. Plot planted with whole or "drop" seed not so good as cut seed, especially for autumn plant-

ly to discuss varietal tests, seed selection, marketing, etc. He also spoke of past season and its disappointments through much top and little crop, due to three factors. Some examples were a late variety under wrong name—Oregon Purple Rose. Climatic conditions were unfavorable, a long cold spring. Some seed was very poor, crop showing pear shaped tubers common to varieties "running out." Other lesser contributing causes with but local application were noted. Cover crops were most productive. One field with no treatment in one part produced 60 sacks per acre; \$30 worth of barnyard manure gave 90 sacks; that part previously in yellow melilot yielded 105 sacks.

Secretary Dillon of the Van Nuys chamber of commerce was a booster

other days two hours are necessary. Sprinkling with or rolling in powdered lime or sulphur after cutting seed brought good results. Few cases of late blight were reported and were controlled by 5-5-50 Bordeaux mixture. Spray before lower leaves are fully formed. Wireworms and cutworms were not bad past season. The harrow and disk holds both in check but where cutworms are bad poisoned bran should be used.

Geo. H. Peters of Bakersfield told of a trip East, and of lessons learned. California potatoes have quality but are poorly graded. From California to Maine and back cover crops bring best results. H. E. Truax of the United States bureau of markets stated 1920 crop is about 414,000,000 bushels, or 55,000 bushels above the average crop for ten past years. Storing is heavy in Maine and some other points, so prices this season will probably not be high. He advised better grading. R. G. Risser, manager of crop estimate department of the California Vegetable Union, was a visitor from Sacramento and gave a few good words of advice. W. V. Shear, potato expert for the state department of agriculture, made a strong plea for acceptance of certified seed bearing state tag on every sack, telling methods of inspection and stating no one may tell a good seed potato by its appearance. You must know its history and watch it grow. Therefore let the state certify seed for you, based on three thorough and timely inspections of the growing and harvested crop.

E. D. McSweeney and T. H. Lambert of El Monte each gave a few words of advice and encouragement, after which the meeting adjourned, the audience visiting fields in various parts of the valley until sundown, observing all possible conditions of crops and lack of crops.

Local center meetings of the Glenn County farm bureau will be held at Willows, November 15; Capay, 17; Plaza, 19; directors' meeting, 20; Elk Creek, 22; Grapevine, 24; Larkin, 26.

Horticultural Commissioner Stabler of Sutter reports that 2,900 pounds of poisoned barley has been distributed in that county for squirrel extermination.

Potato Growers and Farm Advisers

1, Farm Adviser Wahlberg, Orange County; 2, E. D. McSweeney, El Monte; 3, Farm Adviser Hodgson, Los Angeles County; 4, T. H. Lambert, El Monte; 5, J. L. Oleson, Van Nuys; 6, Assistant Farm Adviser Bougher.

ing. Locally selected seed is preferable to others, especially if certified. Burbank variety is worthless and local growers won't "get seed back."

Feast at Van Nuys

The gathering then drove to the Van Nuys high school, where the domestic science class served a splendid lunch at a reasonable price and was congratulated for its excellence by a unanimous rising vote on the part of the diners. Later in the auditorium G. E. Gordon presided. Farm Adviser Hodgson was the first speaker, saying future meetings of this nature would be in hands of potato growers department, which would meet frequent-

for the San Fernando Valley, stating the value of its past year's agricultural products was \$13,000,000. Principal Smith of the high school promised hearty cooperation and invited all to come again, stating young Whitsett of his school made the state record for 1920 spring potato crop. Mr. Bougher gave a general crop review and some good practical advice. In sweating spring crop for autumn planting pile lightly for free airing or rot will result. Some cure by leaving in the dry soil until other soil is ready and dig and replant at once. Be careful to "set" skins properly. Some days 15 minutes exposure is sufficient; on

Big Profits If You Will Raise Guinea Pigs

In order to supply our ever increasing demand for cavy (guinea pig) for use in hospitals, laboratories, etc., we have opened a California branch. Few industries offer such profits at such investment of money and time. Foundation stock can be purchased for only a few dollars and cost of raising is only about 5 cents per head. We agree in writing to purchase all the cavy you raise from stock purchased from us or their descendants and will pay \$1.20 a pair for animals a month old or older delivered. Even a few pens should pay you well. Send for booklet about breeding, care and money-making opportunities raising cavy. You can get started raising cavy on an investment as low as \$5.00.

A hundred breeding female cavy, and they have five litters a year, which is five hundred litters, and the Government figures three young to a litter which is 1,500 young, and figure that the first three litters from your original 100 breeders will have young during the same year, that will be 300 litters, and at three to a litter, which amounts to 900 young. Add the above 1,500 young to 900, makes the total of young from your original cavy 2,400 for the year, and at our contract price of \$1.20 per pair, for you can rest assured that about half will be males and half females, and your profits for the end of the year will be \$1,440.00

from your small investment, and you will still have your stock that you had to begin with

To Sell to Us. 250,000 Needed Yearly

by laboratories and other institutions every year in all parts of the country. Many of these big orders, representing over a million and a half dollars expenditure each year, are waiting for supplies. Waiting for people to wake up to their opportunities and raise sufficient stock to meet their requirements. One institution alone in Pennsylvania requires on an average of 1,500 guinea pigs each week.

We have more orders than we can possibly fill, so we will furnish you breeding stock at small cost.

Guinea pigs are very prolific and at six weeks of age are ready for mating. They thrive in any climate and can be successfully raised in congested neighborhoods without annoyance of disagreeable odors, even when kept in large numbers.

This Has Nothing to Do With Vivisection.

10 Guinea Pigs should earn \$100 a year. 500 Guinea Pigs should earn \$5,000 a year

Enclose this adv. and 25c for booklet on "How You Can Make \$2,000 a Year"

Fourth Tulare Sale

60 REGISTERED 60 HOLSTEINS

Sales Pavilion, Tulare, Cal.
Thursday, December 2, 1920

Representative breeders will offer in this sale a selection of well bred females, and a limited number of young bulls, that should meet with the approval of buyers seeking foundation material

**Yearly Record Cows
Daughters of Yearly Record Cows
By Great Yearly Record Sires
In Calf to Yearly Record Bulls**

Among the reference sires, bulls to which females in the sale are bred will be found:

SIR AAGIE DE KOL ACME 2ND, five of whose seven nearest dams average 1,153 lbs. butter in one year.

SIR PIEBE DE KOL SEGIS PONTIAC, by Senator Hackney's famous bull King Segis Pontiac Count, and out of a dam that made 717.46 lbs. butter from 17,635.2 lbs. milk in one year.

KING PONTIAC ALCARTRA PRILLY, by the three times grand champion, King Segis Alcartra Prilly, and out of a 36.61 lb. daughter of Spring Farm King Pontiac that milked 805 lbs. in 7 days and is now on yearly test.

MOORLAND KING MEAD HASKINGS, a 32 lb. son of King Mead of Riverside, second dam a 32 lb. 4 year old.

SEGIS PONTIAC ABBEKERK, a 35 lb. son of Segis Pontiac De Kol Burke, second dam a 31 lb. daughter of Tidy Abbecker Prince.

PRINCE GELSCHER WALKER ALCARTRA, by Prince Gelscher Walker, out of a half sister to Tilly Alcartra that made 796.16 lbs. butter from 19,043.5 lbs milk in one year.

SIR VEEMAN HELENA KORNDYKE, by the great young proven sire Sir Veeman Korndyke Pontiac, and out of a 31 lb. dam.

62 Registered Hereford Females AT PUBLIC AUCTION

Finnell Stock Farm, Galt, Cal.
Thursday, November 18 at Noon

An offering of desirable young females from their herd of 180 head of registered Herefords, made in order to reduce the herd to the present capacity of their equipment. The offering includes:

16 Cows With Calves at Foot

25 Bred Cows and Heifers

21 Open Heifers of Breeding Age

The herd is headed by BEAU BLANCHARD 37TH, a son of Engle's famous Beau Blanchard, and SIR THOMAS, both of which have some good daughters in the sale.

43 Out of the 62 Females in This Sale Were Born
in 1917 or Later; The Balance from 1913 to 1916

This is an especially attractive offering for the buyer of foundation females, especially those who want to start a registered herd under range conditions, for this herd has always been handled strictly under range conditions, and carefully culled down to the females that drop a good calf regularly each year.

GUARANTEED BREEDERS—TUBERCULIN TESTED

28 BULLS FOR RANGE SERVICE

The owners have on hand 28 registered Hereford bulls, bred in this herd, two year olds and yearlings, that are offered for sale at private treaty. These bulls may be inspected at any time, and bargained for now or on sale day. The owners will price them in lots to suit buyers.

Owners:

Finnell Stock Farm Company, Galt, Cal.

Management

California Breeders Sales and Pedigree Company

C. L. Hughes, Sales Manager, Sacramento, Cal.
Auctioneers: Col. Ben A. Rhoades, Los Angeles; Col. John A. Davis, Manteca

NOTE—Finnell Stock Farm is located about nine miles east and slightly south of Galt, Sacramento County, California; about 35 miles southeast of Sacramento. Southern Pacific trains will be met at Galt morning of sale, and lunch will be provided before opening of sale.

Milk Producers Win Again

By R. P. Royce

FOLLOWING closely the decision by Judge J. C. Needham of Modesto, by which the suit against the Milk Producers Association of Central California was thrown out of court, comes the announcement that the second suit of the same series—viz., those instituted by Attorney General Webb—and the one against the Northern California Milk Producers Association, has been most emphatically disposed of by Judge Peter J. Shields of Sacramento.

In sustaining the demurrer entered by the association's attorneys, Judge Shields stated that the attorney general's complaint "fails to state cause for action." Further, that "a great industry should not be called upon to defend itself against charges so uncertain and impermanent as the record of this case discloses."

The decision of Judge Shields is regarded as one of the most important yet delivered relating to the activities of cooperative enterprises for the distribution of agricultural products and promises to become an important precedent.

In disposing of the case, Judge Shields goes to considerable length in making clear and setting straight many of the charges aimed at the milk producers associations.

To the charge that the association has capital stock in violation of its charter, the decision points out "that the statute under which defendant was formed is one of the class of statutes that gives to the capital of the defendant a character as 'capital' as distinguished from 'capital stock'."

"It provides for fees from members, for annual payments to them for charges to be imposed on them for services rendered and for mortgaging and encumbering the property of the corporation. These are the sources from which the defendant's capital is said to have been derived."

"And when it is raised in this way under the permission of the statute, it must clearly mean that the capital so derived shall not be regarded as capital stock."

As regards the ownership of property and equipment, the decision says: "The right to raise money and to purchase and hold property appears throughout the statute. Plaintiff concedes that corporations of the character of the defendant corporation may own a limited amount of equipment. Who has the right to say how much? If it can own a little churn, why not

a big one and why not 20 or any number?"

Further, in view of the fact that the state had permitted the defendant to incorporate as a business industry, "it would be impossible to conduct this business without the properties of the kind it is claimed to possess."

To the contention that the association had ceased to function as an agent for its members and had in reality become a manufacturing enterprise which was in violation of the charter under which organization was effected, the decision pointed out that if the association had the right to handle milk it certainly followed that it should have the right to manufacture and sell products originating from milk and that no grounds were found to support the above charge.

As to the internal affairs of the association the decision suggested that any cause for complaint was a matter between the association and its members and was not a concern of the public.

A most important feature of the decision relates to the charge that the association is too large and that "such corporations should only be small neighborhood bodies." That contention is pointedly brushed aside by the statement that such contention "is not only without support in law but is contrary to social experience. I believe that the statute contemplates and will support a cooperative organization of an industry as wide and as extensive as the industry itself."

No announcement has been made suggesting that the case will be taken to a higher court, but such action will probably follow, and the members of the association are hopeful that an early appeal will enable them to get a higher ruling.

The principles of law involved in the suits instituted against the milk producers operate with other cooperative enterprises and at several points touch the very life of cooperative marketing.

It is interesting to note that to date the milk producers have successfully met each obstacle that has been placed in the path of their progress. While the various suits have been disagreeable, they have served to straighten out many misconceptions developed in the minds of the public—not the least of which is that the dairymen have organized with honest intent and that they are determined to manage their affairs so that they can receive a fair price for their products.

Buyers of Rosamines Holsteins

Last week it was necessary to leave out the detailed list of buyers at the Stalder Brothers great dispersal sale. The principal buyers who absorbed the 137 head for an average of \$533 appear below:

1. King Pontiac Netherland Segis 3d, \$2,900, Bost & Johnstone, Corona.
2. Sir Ormsby Skylark Rowena, \$3,500, Sierra Vista Ranch, Perris.
3. Rosamines Pontiac Netherland, \$450, Pottenger Sanitarium Company, Monrovia.
4. Aralia Maid, \$1,000, Robert N. Clapp, Nuevo.
5. Gerben Abbecker Maid, \$1,000, Robert N. Clapp.
6. Rosamines Pontiac Jul, \$150, R. C. Jacks, San Francisco.
7. Rosamines Ononis Ormsby, \$1,175, Burr Farm, Los Angeles.
8. Pontiac Sir Ormsby, \$130, W. B. Mills, Ontario.
9. Rosamines Maid Ormsby De Kol, \$525, Mrs. Annie Donders, Fresno.
10. Rosamines Gerben Aralia, \$550, Burr Farm.
11. Abbecker Pontiac, \$1,475, Robert N. Clapp.
12. Rosamines Abbecker Netherland, \$440, C. V. Harris, Compton.
13. Rosamines Pontiac Gerben, \$300, R. C. Jacks.
14. Rosamines Abbecker Ormsby, \$1,475, C. V. Harris, Compton.
15. Rosamines Maid Ormsby, \$260, C. V. Harris.
16. Rosamines Ormsby Abbecker, \$1,050, Robert N. Clapp.
17. Rosamines Skylark, \$135, W. B. Mills.
18. Rosamines Sir Skylark Ormsby, \$500, F. A. Speck.
19. Rosamines Duchess Ormsby, \$2,150, Morrison.
20. Skylark Bubble, \$1,200, D. G. Maxwell, Hollywood.
21. Rosamines Skylark Bubble, \$275, C. V. Harris.

22. Alice Ormsby Creamerie Hengerveld, \$385, Bost & Johnstone, Corona.
23. Stanislaus Belle Hengerveld, \$1,075, D. G. Maxwell.
24. Stanislaus Segis Hengerveld Queen, \$375, D. G. Maxwell.
25. Stanislaus Skylark Inka De Kol, \$675, D. G. Maxwell.
26. Rosamines Segis Ormsby, \$600, D. G. Maxwell.
27. Countess Skylark Ormsby, \$500, D. G. Maxwell.
28. Minta Segis Pontiac, \$1,750, Robert N. Clapp.
29. Rosamines Pontiac Korndyke, \$160, R. C. Jacks.
30. Rosamines Ormsby Netherland, \$375, W. B. Mills.
31. Rosamines Pontiac Skylark Anggie, \$150, San Diego County farm, San Diego.
32. Stanislaus Princess Cleopatra, \$200, R. N. Clapp.
33. Rosamines Bonita Ormsby, \$485, Carl Ray, Lankershim.
34. Rosamines Princess Ormsby, \$500, George Hale, Pixley.
35. Rosamines Cleopatra Ormsby, Carl Ray, \$450.
36. Rosamines Cleopatra Ormsby De Kol, San Diego County farm, \$275.
37. Rosamines Maid Segis De Kol, \$400, Mrs. Annie Donders.
38. Dora Netherland Segis, \$850, Fred Hartsook, Lankershim.
39. Dora Pontiac Segis, \$600, Fred Hartsook.
40. Rosamines Jeek Pontiac, \$400, Fred Hartsook.
41. Rosamines Dora Netherland, \$1,000, D. G. Maxwell.
42. Rosamines Dora Jeek, \$475, Fred Hartsook.
43. Rosamines Jeek Ormsby, \$385, Fred Hartsook.
44. Madrigal Sarcastic Girl, \$425, J. W. Butler, Pomona.
45. Sarcastic Girl, \$350, F. T. Underhill, Santa Barbara.
46. Rosamines Johanna Mercedes, \$250, D. G. Maxwell.

CALEDONIA SHORTHORNS

Imp. Caledonia

Caledonia Shorthorns constitute one of the choicest collections of the breed owned in America. Our herd bulls, Imp. Caledonia, Gainford Matchless, grand champion at the 1910 San Francisco show and Pine Grove King stand out prominently in the West. Our females represent choice Scotch and American families, and are noted for their type and quality. We can at all times furnish foundation material and bulls suitable for any herd or for the range. Our prices are moderate and every animal is guaranteed. Visit our farm and herd. Send for special bull list.

It may be had without cost by writing Division of Publications, Department of Agriculture, Washington, D. C.

75 Registered Holsteins

WITH
TYPE—PRODUCTION—BREEDING—HEALTH
AT PUBLIC AUCTION

Wednesday, December 1, 1920
Westlawn Farms, Fresno, Cal.

Betsy Lamb Prilly

It is necessary to re-seed practically all of the alfalfa fields at Westlawn Farms, and the owner, Mr. H. E. Vogel, has decided to disperse his entire milking herd of registered Holsteins, including also some choice bred heifers and a few good young bulls.

This herd has been developed along constructive lines for twenty years, and is composed of a remarkably good lot of individuals with production, popular breeding, and good health.

Among the Females

are daughters and granddaughters of KING MEAD OF RIVERSIDE, PRINCE GELSCHER WALKER, JULIANA KING OF RIVERSIDE, KINK OF THE PONTIACS, FIDELLA PRINCE OF RIVERSIDE, ARLAIA DE KOL, SEGIS PONTIAC DE KOL BURGE, AND OTHER SIRES AND DAMS OF CORRESPONDING WORTH.

Females of Breeding Age Are Bred to:

SEGIS ALCARTRA DE KOL BURKE, by Segis Pontiac De Kol Burke and out of a 29 lb. 4 year old that made 621.1 lbs. butter in one year as a 2 year old, her dam a half sister of Tilly Alcartra that made 753.1 lbs. butter from 19,972.4 lbs. milk in one year as a 3 year old.

KING ARLAIA MEAD, by King Mead of Riverside, and out of Margaret Aralia De Kol, 1,161.48 lbs. butter from 22,922.7 lbs. milk in one year, she by a son of Aralia De Kol and out of a daughter of Juliana King of Riverside that made 653.21 lbs. butter from 16,387.1 lbs. milk in 338 days as a 4 year old.

SIR AAGGIE ARLAIA BURKE, by Sir Aaggie De Kol Acme and out of a daughter of Margaret Aralia De Kol. His dam is now on yearly test, and omitting her, his six nearest dams average 1,071.32 lbs. butter and 23,545.3 lbs. milk in one year.

KORNDYKE SADIE VALE PRILLY, by King Korndyke Sadie Vale 22nd, a 30 lb. son of King Korndyke Sadie Vale, and out of the grand champion cow Betsy Lamb Prilly, 35.03 lbs. butter from 743.3 lbs. milk in 7 days, and she made 31.37 lbs. butter from 647.8 lbs. milk in 7 days at previous freshening as a senior 4 year old.

BETSY LAMB PRILLY HERSELF WILL BE SOLD. Here is one of the very greatest young cows that ever appeared in a western sale, a cow that we tried hard to get to represent California in the world's record consignment at the St. Paul sale last June.

Watch for details in next week's issue. Write for catalog now

Stockyards and the Small Stockman

By A. L. Spellmeyer

ATTLEMEN running large herds do not appreciate the problems and views of the small stockman running a few head of cattle on some farm in connection with the raising of other products, yet it's this small man who will eventually save the national meat supply.

It is true that the larger cattlemen have done all the work to secure fair markets and better prices for cattle, as they are in it so they cannot quit when prices or conditions do not permit a profit, and the small man can take his loss on a few head and be out. The droughts and the pre-war cattle prices now prevailing, with every element in the cost of cattle production on a profiteering scale, have whittled a lot of the larger outfits down to smaller size. The element of instability has made it impossible to take on a big debt and figure small prospective profits. One never knows how much a bunch of cattle is going to cost him or what he is going to get for them.

Development of future beef needs must come through the small men, and there are thousands of California ranches which have waste feed in connection with other farming, that could use some cattle to advantage. The very high alfalfa prices have made it preferable to sell hay, and the low beef price has made a profit on any steer a gamble on any kind of feed.

The high hay prices are caused locally by drought in two-thirds of this state and the vast amount of butter and milk required by the cities, owing to the people crowding into them. Even the rabbit business takes thousands of tons of hay yearly and in many families cuts off a portion of their meat purchase, hitting cattle production two ways, a comparatively insignificant blow, but nevertheless a thousand steers' feed and flesh in the state in a year.

The second reason that the development of the small cattle farmer has been retarded is the lack of regular market. A few head, or even one car, doesn't interest the packers. The only market is the local butcher at several cents under the market for large lots of fat steers or cows. If the small man ships in he is done on both price and weight. Handicapped by \$10 to \$30 per head, the small man doesn't fool around with cattle. Many a California ranch farm is playing out. Many an alfalfa ranch requires fertilization such as only stock or expensive chemicals can give. Travel among the 20 acre farmers, the 40 acre and the 80 acre men and you will hear them talk of it. Many a man figures getting it and selling. Soil robbery will result in the conditions prevalent in many Eastern states some day, as even California soil won't give continually without being fertilized.

They can talk of farm bureau co-operation in marketing, etc., and it's a good thing, but what is needed is a regular market where small men or large men can ship stock and get the cash. Then we will have better blood and we will have places where men can go and buy a milk cow or a registered beef bull, knowing its value. We can buy autos on contract but where can a man go for a single good bull and pay for it monthly?

I, for one, have tremendous confidence in the sincerity and honesty of purpose of our cattle association leaders, but most men when they figure a regular market, a stockyards or anything similar, compare it with Middle Western ones. California doesn't need to have that kind. Its killing majority is not at present entirely in the hands of the meat trust. It has a healthy, prosperous hunch of independent killers, who are trailing along, having been bitten before by many traps of trust packers, until they are playing it very safe. It may be hard on beef sellers to have independents underbid the old liners, but it's a protective measure they can afford to pay for as an industry. The Los Angeles independents are a very wise lot who play the game close and hard for its last nickel, quitting perhaps when the volume gets unprofitable, starting again when it pays. They call our

largest independent a \$50,000 a year man if he would only go to work for a regular line packer. California is the model of cooperative marketing in many lines. There is no good reason why cattle marketing couldn't be hulled up on similar lines. If the retailers require enormous profit percentage and the killers make \$10 to \$20 per head while the producer loses \$20 to \$60, why can't it be cut out? Why can't these cattlemen market direct to consumers?

Some of the packers want a stockyards now. Give it to them under certain safe conditions, establish the market, and then go ahead with modern cooperative marketing to offset possible abuse. There is no particularly keen brain among this state's packer representation. If there was they wouldn't have hurt the cattle industry and raised the inevitable question of shortage as the next step. This state is off to itself. Its killing demand in two cities is over a half million cattle yearly. It has allowed manipulation and no recourse just because it was isolated and therefore California prices have been as much less as freight and shrink would be to regular Middle West markets. This same condition would operate as well for the cattle producers if they were lined up in a movement, with a regular stockyards, as it now operates against them. Anything brought in to break the price would have to stand that extra freight and expense. The cattle are not here to supply this coast's demands in steers for 1921 and cow slaughter can't continue always.

There are a hundred men in the business of handling dairy cows for sale around Los Angeles. There are dozens on the road buying small lots and killing them on commission. There are hundreds of men with trailers in the country going around and picking up cows and calves far under value from farmers and dairies. A regular market would concentrate this trade on a value basis. A thousand industries would spring up. Banks would know prices, know cattle value, would have a possible immediate market to protect them and would loan money on that basis to stockmen, as when they are safe and liquid, cattle loans are the finest investment in this world. When a man wanted some feeders he could get them, if he wanted money he could realize.

There are other lines of industry besides cattle. The hog man can now get fine breeding stock, thanks to a few rich men who have established some of the finest hog ranches in the country in Southern California. Even the farmer who pays a couple of hundred for a registered sow and has a litter from a thousand dollar boar must advertise and hunt around, or just figure his increase on pork basis. A stockyards would change that. There is no meeting point for men wanting to buy and men wanting to sell.

A man wants a hundred or two hundred stock cattle or young steers. He takes the train to Arizona, contracts, waits for delivery, fights some fellow to get them aged and classed right, pays more freight than he figured, loses a few en route, and comes home worn out with a lot of costly cattle that don't just suit him at that. All this would be done away with. He could go to a yards, get his cattle, save his expense of wasted time looking, classing and shipping, and have what he wanted. The seller would ship them in, get what demand paid him, and get it in cash quick. If he made all right; if he lost he would have the cash to try again, and not be tied up with unmarketable stock, with his bank writing and demanding him to pay what he owes and refusing more money to pay for range or feed, because the very value of his stock was an uncertain remaining-to-be-proven proposition.

A lot of these things are hard to figure as this man is pulling this way and that man the other. There is apparently no organization the farmers and the stockmen will support. Their very power is nullified through their being split up. Of all the things under the sun cattle have in the last

five years had the hardest blows. Everything else raised in price, even though it declined later, but the cattlemen fought drouth for the first few years of the big war and since have been fighting bad markets, and while meat is higher than ever to consumers, get nothing for their trouble except work, worry and loss.

The 1914 prices on hogs were about seven to eight cents. They went to 20 cents and later declined to 15. Lambs were in 1914 about \$3. They went to \$11 and now are about \$1. Sheep on range in 1914 were \$6 and wool 15 to 20 cents. Sheep went to \$20 and wool to 70 cents. Now sheep are about \$10 and wool about 30 cents. But the 1914 cow was \$40 and the 1920 cow is \$40 on those same ranges. The 1914 yearling sold at \$30 and so does the 1920 yearling. The highest it ever got was \$50 for the cow and \$40 for the yearling. In range districts like Arizona, beef was eight cents here this year. Meat sold in 1914 to consumer at 25 cents for good steak and in 1920 at 50 cents. Cattle are safe now, but people don't want things which were unprofitable in the past few years. A regular market would surely show the shortage. A lot of the regular line packers have their jealousies and the packer fight is for volume, as therein lies profit. It might be stimulated locally as some of the present plants are not buying.

The horse and mule trade is quite a business in itself. Any stockyards here would have an important branch in its dairy trade as this is a great milk and butter state. When men only figure the beef cattle end they are shortsighted.

Kansas City 30 years ago supported thousands of men and hundreds of industries in its stockyards when their volume of business was comparatively small. All the rising young ambitious men went into some industry connected with livestock. That's about all Kansas City had then and now.

Now this Southwest is the great center for cotton. We have the cotton plants here and more coming. It will be the world's cotton center in ten years. The manufacturers simply have to locate here for their own economic saving. Great textile plants will arise and our acreage possible for cotton growing isn't even scratched. Already Los Angeles is acquiring slums and the exterior points of a large manufacturing town. Today this is one of the great bond selling centers of the country, with its banks assuming broader ideas and policies.

All cotton growing means production of cottonseed. From cottonseed come valuable oils for many purposes, including food. This cottonseed meal and hulls is one of the best feeds for fattening cattle. A great beef producing center with capacity already of 20,000 cattle is started. It is nothing to what it will be. Cottonseed feeding has been expensive; it is now much cheaper. It is even possible that thousands of head of beef could be fed and fattened for the Eastern markets if we had surplus cattle, which at present we have not.

But conditions are progressing which make the establishment of a great stockyards or market probable either in Los Angeles or Phoenix within the next few years. Why fight against it or delay, when now the cattlemen could have a ruling voice in a plan to suit their needs? It's bound to come with development, as the hog, sheep, mule, dairy and cotton interests and a thousand natural forces are going to make a central market desirable. If present cattle production costs and prices continued another two years none of us would be in the business anyhow, and if we can't organize towards direct to the consumer marketing, we can quit kicking and suggest a stockyards on some basis we won't fight.

GRAIN FEEDING FOR DAIRY COWS

Profs. Wo'll, Voorhies and Castle are joint authors of Bulletin 323, "Heavy vs. Light Grain Feeding for Dairy Cows." Dairy men will find it invaluable and it may be had by writing Experiment Station, College of Agriculture, Berkeley.

GREAT HOLSTEINS COMING

The excellently equipped dairy plant at the Maxwell Farms near Los Angeles is about completed and the famous Holsteins from the farm at Waterloo, Iowa, are beginning to arrive. Gaining this herd is the greatest stride California has taken in Holstein history in many a day, for it is a famous one. At its head since the start stood Sir Ormsby Skylark, the sire of the world's record cow of all breeds, Duchess Skylark Ormsby, who made 1,506 pounds of butter in 365 days, and the Maxwell herd today contains over 50 of his daughters as well as a number of daughters of King Segls Pontiac and Woodcrest Hengerveld De Kol.

Sir Ormsby Skylark died last fall and in order to carry on the same line of breeding, Tritomia Pietertje Ormsby, one of the best sons of the great Sir Pietertje Ormsby Mercedes, has been placed at the head of the herd. Assisting him is one of the greatest line bred bulls of the Ormsby family, Major Pietertje Ormsby, who is also by Sir Pietertje Ormsby Mercedes. As a probable successor to Sir Ormsby Skylark the Maxwell Farms are banking on one of his last bull calves who is out of Ormsby Buffalo Mercedes, a daughter of Sir Pietertje Ormsby Mercedes. The dam, now on yearly test, is going at a 1,200-pound clip. In this calf there is a wonderful blending of Ormsby blood through Sir Pietertje Ormsby Mercedes, Pietertje Maid Ormsby and Sir Ormsby Skylark.

This herd combines both show type and production, for it has been a big winner at all the eastern shows, including the National Dairy show, and all the cows three years old and over average over 30 pounds of butter in seven days.

It is the wonderful California climate that is bringing this herd to the coast and with it comes Uncle Dave Maxwell one of the greatest boosters the Holstein cow ever had.

HOLSTEIN-FRIESIANS SELECTED AT DELHI

After long and careful consideration of the comparative merits of the various dairy breeds, the settlers of Delhi land settlement cast their ballots by a big majority in favor of Holstein-Friesians, and this will be the official dairy breed of the settlement.

The Delhi settlement comprises 10,000 acres at Delhi, in the southern part of Stanislaus County, and a large number of farms have already been allotted under the state land settlement plan. There will be over 300 farms in the total allotment. The merits of the Holstein-Friesian breed were placed before the settlers by C. L. Hughes, secretary of California Holstein-Friesian Association, and H. V. Brideford, former president of the same association. The California Holstein-Friesian Association will cooperate with the settlers in securing foundation breeding Holsteins of the right qualifications to make the Delhi settlement one of the high class breeding centers of California.

Veterinary

Feed Value of Coconut Meal

What is the value of coconut meal as feed for milk cows and little pigs and fattening pigs? Are dairymen feeding it?—Subscriber, San Diego.

Coconut meal has very much the same feeding value as bran. It is a very desirable food for milk cows. If allowed to stand, however, a very long time, particularly in hot weather, it sometimes gets a bit rancid so that unless conditions are favorable for keeping it it is better to buy it in small quantities. It is quite palatable and has a laxative effect on the cows which also makes it a desirable feed. It can be fed at the rate of two to four pounds per day per cow under

ordinary conditions but is best mixed with other feed such as grain and perhaps beet pulp. It also causes the butter to be somewhat more firm than the butter produced without coconut meal. This is of course desirable in

the summer time. It is not found to be a very desirable hog feed although it can be fed in small amounts in the hog's ration. It is a little bit bulky to get best results in feeding in any quantity to hogs.—G. E. G.

Lady Milky Aaggie Pontiac!

This great 17 month old daughter of the world's record senior three-year-old, Lady Aaggie Echo Hengerveld, "the \$10,000 cow" and the only living Holstein to hold as many as three world's records (her world records are: 24.69 lbs. butter from 494.4 lbs. milk in seven days, eight months after calving; 1,200.7 lbs. butter from 28,008 lbs. milk in 365 days as a senior three-year-old), and sired by Chlmacum Spring Farm King Pontiac who now has 21 A. R. O. daughters with average 365 day records as two-year-olds of 500-900 lbs. butter, and seven day records from 16.00 to 23.77 lbs. butter will head

Milky-Way Farm's Consignment Pacific International Holstein Sale Portland, Ore., Friday, Nov. 19

We also sell Maldeta de Pauline 2d, a 26.32 lb. daughter of Sir Johanna Ruth Fayne; Maldeta Ormsby a daughter of Greenbank Sir Ormsby Hengerveld Jr.; Maldeta Prilly, a 16.376 lb. two-year-old; Colony Netherland Segls Newman with a 365 day record of 840 lbs. butter from 20,104.8 lbs. milk, is a daughter of Aaggie Cornucopia Newman and out of Netherland Segls 2d; Nooksack Lunde Oregon De Kol, a 28.75 lb. five-year-old; Jacoby Canary Hartog, a promising daughter of Canary Hartog Paul 2d; Peconic Lady of Donnybrook, Hengerveld Pontiac of Donnybrook and Carrie Pontiac of Donnybrook are fine big two-year-olds. Netherland Valdesa Fayne, a 34 lb. son of Flinderne Mutual Fayne Valdesa is our only bull entered.

Attend the sale and watch for our consignment.

MORE PORK IN LESS TIME

Duroc-Jersey hogs have a tendency to put on great amounts of pork at an early age. They are easy-feeding animals, and raise large families. These hogs were introduced less than 50 years ago, and yet in 1918, 51% of all the hogs marketed in the country were "Duroc-Jerseys." They are uniformly red in color. Increase your profits by raising Duroc-Jersey hogs.

Write for "DUROC-JERSEY HOGS ARE PROLIFIC AND PROFITABLE"—sent free to hog-raisers by the largest swine record association in the world. Over 12,000 members.

THE DAIRYMAN'S OPPORTUNITY

(Continued from Page 627.)

pure breds, wouldn't it be better business to bridge the gap between grades and pure breds by putting in the latter? The soundness of that proposition will be generally admitted and the tendency of our dairy cattle development is toward that ultimate end.

Naturally a complete change from grades to pure breds cannot be brought about at one "fell stroke." There aren't enough pure breds by thousands to make the change—and there are a lot of dairymen who need to be converted. But there are enough pure breds to start a good many individual dairymen on the right track and there never was a better time to make a start with pure breds or to increase the number maintained in a herd of part pure breds and part grades than confronts our dairymen this present season. The reason for the last statement can be found in a number of circumstances that exist at present.

In the first place, as noted above, grade values are quite the highest we have known, and they are likely to go even higher. During the last year a good many herds were liquidated. Most of the better cows from those herds found their way to other dairies. The plainer things went to the shambles. The above liquidation has developed a shortage of the better sorts. There appears to be a surplus of feed and, in addition, there is plenty of evidence to support the contention that a good many men who sold out and a good many who have been engaged in raising certain grain crops and cotton that war demand sent to high price levels are making their plans to get back to cows, many through necessity. When these men enter the market their bidding is likely to increase grade values even more.

Because pure bred values on the average have not increased in proportion to other values there is less margin between the price of a good grade cow and a pure bred than ever before. Under those conditions it is possible for a dairyman to purchase registered cattle to exceptional advantage.

Keeping the above fact in mind, there are other reasons why the thoughtful dairyman will seriously consider putting in at least a few registered cows this winter. First of all, the pure breds, because they are more efficient than grades, will enable the dairyman to produce milk and milk products more economically. Second, if along with general readjustments of values the price of cattle tends toward lower levels, one can be most certain that the values that will recede first and the ones that will be affected most will be for grades for the reason that there is less stability behind such values than is behind pure bred values. Again, it is sound practice for any dairyman to make a start with pure breds in order to lay the foundation for a herd of registered cattle.

Another point to consider: The man who builds up a herd of registered cattle not only has a more efficient herd than his neighbor with scrubs, but when the time comes to sell his herd it can be cashed to decidedly better advantage.

During the next few weeks there have been scheduled a number of pure bred dairy cattle sales and it seems a most propitious time for California dairymen to display a bit of foresight by taking advantage of the opportunities these coming sales will offer. That many men will act to their advantage is certain—but how about you, individually?

GETTING READY FOR THE INTERNATIONAL

Preparations for the world's greatest livestock exposition at Chicago during the first week of December are now well under way.

When the gates are thrown open to the public, November 27, an elaborate and expensive getting ready program will have insured the most successful International Livestock Exposition since the inauguration of that enterprise, which has been effective in promoting the welfare and progress of the livestock industry of all sections of North America.

KOUNIAS HOLSTEINS SELL WELL

In many respects the sale in which the entire herd of Holsteins owned by George Kounias, Modesto, was dispersed was one of the best of the fall season. With one of the largest crowds seen at a recent sale in attendance, 24 buyers absorbed the 65 head, consisting of cows, heifers and bulls, many of them but a few months old, for a general average of \$315. However, it should be stated that the sale included 12 head that were sold as reactors. Seventeen cows averaged \$559 and 21 young heifers averaged \$250.

The top of the sale was reached with the six year old cow, Dominita Colantha De Kol 2d, with 28.74 pounds to her credit, that was purchased by Gotshall and Magruder, Ripon, for \$1,225. This same firm was one of the most extensive buyers of the better lots and secured seven head in all. George P. Robison, Sacramento, buying on order for D. E. Cable of Modoc County, was the heaviest buyer at the sale. Hollywood Ormsby Segis at \$1,000, the second high priced female, was taken by Robison, and he also secured the good young bull, King Korndyke Aaggie Fayne, for \$500. J. A. Stenmark, Manteca, bought the 18.78 pound Dominita Pietertje De Kol for \$700. W. H. Bryan of Patterson picked five of the females and W. J. Denison of Modesto got a like number.

The sale was managed by C. L. Hughes of the California Breeders Sales and Pedigree Company and Col. Ben A. Rhoades of Los Angeles was on the block. Col. Corley of Modesto worked in the ring.

A representative list of sales follows:

BULLS

- 1, King Korndyke Aaggie Fayne, March, 1917; D. E. Cable, \$500.
- 3, Kounias Judge Segis Ormsby, Nov. 1919; J. H. Severin, Modesto, \$200.
- 5, Kounias Sir Colantha 2nd, Feb. 1920; Geo. P. Robinson, \$275.
- 17, Kounias Pietertje Ormsby, Feb. 1919; Geo. P. Robinson, \$200.
- 23, Kounias Aralia King Ormsby, July 1919; Geo. P. Robinson, \$160.
- 48, Kounias King Ormsby 20th, May 1920; G. E. Thornberg, Turlock, \$140.
- 56, Kounias King Ormsby 24th, May 1920; Geo. P. Robinson, \$125.
- 67, Ormsby King Nightingale, Feb. 1919; Louise Zubani, Modesto, \$220.

FEMALES

- 2, Hollywood Ormsby Segis, June 1915; D. E. Cable, \$1,000.
- 4, Dominita Colantha De Kol 2nd, April 1914; Gotshall & Magruder, Ripon, \$1,225.
- 6, Dominita Colantha De Kol 3rd, Feb. 1916; Gotshall & Magruder, \$485.
- 7, Kounias Colantha Korndyke Ormsby, Jan. 1919; D. E. Cable, \$400.
- 8, Kounias Colantha Ormsby De Kol, Dec. 1919; D. E. Cable, \$400.
- 9, Lady Dominita Pietertje De Kol, Feb. 1917; R. P. Melly, Modesto, \$475.
- 11, Kounias Dominita Colantha, Dec. 1917; D. E. Cable, \$125.
- 13, Kounias De Kol Colantha Ormsby, Nov. 1918; D. E. Cable, \$400.
- 14, Kounias Colantha De Kol Ormsby, 2nd, July 1920; D. E. Cable, \$200.
- 15, Kounias Bonnie Pietertje, April 1918; Francis Miller, Ripon, \$140.
- 16, Dominita De Kol Pietertje, Oct. 1915; W. J. Denison, Modesto, \$200.
- 18, Dominita Bonnie De Kol 3rd, Aug. 1918; Joe Morris, Modesto, \$410.
- 19, Lady Dominita De Kol, May 1914; J. P. Carr, Manteca, \$310.
- 20, Kounias Lady Korndyke Ormsby, Jan. 1918; Gotshall & Magruder, \$535.
- 24, Dominita Bonnie De Kol 4th, July 1912; Gotshall & Magruder, \$300.
- 26, Dominita Pietertje De Kol, April 1916; J. A. Stenmark, Manteca, \$700.
- 27, Kounias De Kol Ormsby 6th, Feb. 1920; D. E. Cable, \$250.
- 28, Kounias De Kol Ormsby, April 1919; D. E. Cable, \$300.
- 30, Kounias Bonnie De Kol, Jan. 1918; Gotshall & Magruder, \$535.
- 31, Kounias Bonnie De Kol Ormsby, Jan. 1919; D. E. Cable, \$400.
- 32, Kounias Dominita Ormsby, Oct. 1916; D. E. Cable, \$325.
- 33, Kounias Lady Ormsby Fayne, Dec. 1918; D. E. Cable, \$400.
- 34, Kounias Skylark Ormsby, Feb. 1920; D. E. Cable, \$300.
- 35, Kounias Lady Ormsby 3rd, May 1920; Charles Ruess, Ripon, \$210.
- 36, Kounias Miss Aaggie Fayne, June 1920; Howard Morrow, Turlock, \$150.
- 37, Kounias Ormsby Fayne Pontiac, April 1920; W. H. Bryan, Patterson, \$200.
- 38, Kounias Clem Ormsby Fayne, May 1920; W. H. Bryan, \$200.
- 39, Kounias Valdesa Ormsby, May 1920; C. P. Hageman, Ripon, \$210.
- 40, Kounias Aaggie Fayne Ormsby, April 1919; D. E. Cable, \$325.
- 41, Kounias Fayne Pontiac Ormsby, Mar. 1919; D. E. Cable, \$350.
- 42, Kounias Ulrika Fayne, Nov. 1918; Gotshall & Magruder, \$500.
- 43, Kounias Clem Ormsby, July 1918; D. E. Cable, \$250.
- 44, Kounias Colantha De Kol Ormsby, April 1918; Gotshall & Magruder, \$525.
- 45, Kounias Pontiac Pet Valdesa, March 1918; W. H. Bryan, \$335.
- 46, Kounias Bonnie Ormsby 18th; Mrs. Frank Klutz, Patterson, \$250.
- 47, Kounias Florence Ormsby, Feb. 1918; Gotshall & Magruder, \$675.
- 49, Kounias Gelsche Walker Fayne Jan. 1920; W. H. Bryan, \$310.
- 50, Kounias Miss Gelsche Walker, Aug. 1917; R. P. Melly, \$525.

No Slippage

The long, wide track of the "Caterpillar" Tractor distributes the tractor's weight over so great an area that the ground pressure per square inch is negligible. At the same time it serves another purpose—prevents slippage on any ground surface.

Eliminating slippage prevents power waste—puts the power where it is wanted, in pulling force at the drawbar. That's why the "Caterpillar" Tractor leads in power.

HOG CHOLERA MONTHS

October and November are the months when the dread disease, hog cholera, is most likely to appear. During those months swine raisers are urged by the United States department of agriculture to be especially observing when feeding hogs in the morning. Any animals in the herd which fail to come to their feed, and particularly those having arched backs and rough coats, should be removed promptly from the rest of the herd.

In some cases hogs sick with cholera die within a few days; in others the disease may assume a chronic form and linger for several weeks. If cholera is suspected swine growers should immediately call a competent veterinarian to make a proper diagnosis and to apply the preventive serum treatment if they are found to be affected with cholera. A post-mortem examination of swine that have died from cholera generally will show one or more of the following symptoms: Purple blotches on the skin; blood-colored spots on the surfaces of the lungs and heart, on the kidneys, and on both the outer surface and inner linings of the intestines, stomach, and bladder; reddening of lymphatic glands; enlargement of the spleen, in acute cases; an ulceration of the inner lining of the large intestine.

In the lingering or chronic cases of hog cholera it is usual to find intestinal button-like ulcers on the intestines.

SOMEBODY GETS A BIG PROFIT ON EVERY HOG

An analysis of the pork situation is furnished by Dr. C. W. McCampbell, head of the animal husbandry department, Kansas state agricultural college. He says:

"A great majority of the pigs of the country are produced in the spring of the year and practically all of these spring pigs are marketed in November, December and January.

"During the past year the farmer was paid an average of \$13.25 a hundred for his 1919 spring pig crop, which means that he received \$33 for a 250 pound pig that cost him \$42.50 to produce. That is the situation that has confronted the producer.

"The consumer that bought the cured ham, cured shoulder, cured bacon, fresh loin and fat back that this 250 pound hog produced paid at the average retail shop \$77.50. This \$77.50 is paid for only 80 per cent of the marketable portion of the hog. It does not include the head, feet, liver, heart, etc. Neither does it include by-products that sell for \$11 and \$14 per hog. Ninety dollars is a conservative estimate of the amount the ultimate consumer paid for the hog the farmer sold for \$33. This represents an increase of 200 per cent between producer and consumer.

"Anyone familiar with the killing of hogs and handling of meat knows that this is an unreasonable spread. It is simply a case of excessive profiteering in a particularly valuable food, especially to the laboring man. It is another instance emphasizing the necessity of closer cooperation between producer and consumer of meats to remedy the present situation of excessive loss to those who are producing a food that must be purchased at excessive cost by those who eat it."

A gas tractor short course will be given at the Union High School at Lodi, San Joaquin County, November 15-20. The school is under the direction of the state college of agriculture. Enrollment is limited to 100.

Off Summer Pastures

Your animals are coming off summer pastures and going on dry feed. It's a big change. Out in the succulent pastures, Nature supplies the tonics and laxatives to keep animals in condition.

—But unless you supply these tonics and laxatives to your stock on dry feed, you are not going to get full returns from your hay, grain and fodder. Besides, your animals are apt to get "off feed" and out of fix.

Dr. Hess Stock Tonic

Supplies the Tonics—Laxatives—Diuretics

It keeps animals free from worms.

It keeps their bowels open and regular.

It keeps the appetite and digestion good.

It conditions cows for calving.

It helps to keep up the milk flow.

It keeps feeding cattle right up on their appetite.

It keeps hogs healthy, thrifty, free from worms.

It means health and thrift for all animals.

Always buy Dr. Hess Stock Tonic according to the size of your herd. Tell your dealer how many animals you have. He has a package to suit. Good results guaranteed.

Why Pay the Peddler Twice My Price?

25 lb. Pail, \$3.50 100 lb. Drum, \$12.00

C. E. Ratchford, who has been assistant forester in charge of grazing in California, has been promoted to the office of chief grazing officer of the service and will make his headquarters in Washington. Ratchford took an active and constructive interest in the cattle problems of this state and was held in very high esteem by all the members of the California Cattlemen's Association.

John A. Bunting, secretary of the Pacific Coast Hereford Cattle Breeders Association, has left for the East to attend the American Royal Show

at Kansas City. While away it is probable that Bunting will secure a herd bull, as it is known that he has his eye on several of the good young bulls of the East.

The animal husbandry division of the University of California has recently taken a ten months lease on the Jersey bull, Dairy Maid's Gay Prince, owned by Fortini and Nelson of Orland. Dairy Maid's Gay Prince was grand champion at the last state fair.

The Holstein Friesian Association announces that the cow, Carnation Pioneer Segis, has established a new seven day fat production record for the junior two year old class by producing 24,877 pounds fat and 415.6 pounds milk. Her sire is Johanna McKinley Segis and her dam is Daisy Pioneer Clyde.

Chas. S. Howard, a prominent automobile distributor of San Francisco, is establishing a herd of Hereford cattle on his 15,000 acre ranch in Mendocino County. Mr. Howard attended the Sacramento sales and made a number of purchases.

Harry L. Redd, the popular herdsman now in charge of the Jane Garden Farm herd, reports that his sen-

ior four year old cow, Meadmore Prilly Queen, a daughter of the 37 pound bull, King Prilly Konigen, has just completed a seven day record of 27.24 pounds butter. She recently dropped a heifer calf by King Korndyke Pontiac 20th.

A press dispatch under date of November 6 states that the Holstein cow, Carnation Segis Prospect, owned by the Carnation Farms, has broken the world's milk production record by producing 33,469 pounds of milk in 318 days and that she has 47 days to go.

R. J. Yates, Orland, announces December 15 as the date on which he will sell 60 Poland Chinas. Mr. Yates is preparing to move to Anderson and is reducing the size of his herd for that reason. As soon as he is settled in his new location it is his intention to raise more and better Poland Chinas.

Just to show that business is improving, Anchorage Farms, Orland, reports the following sales of Berkshires: 15 bred gilts to Christensen & Bermeister, Willows; two boars to H. H. Gable, Esparto; a sow of Natoma's Baron Duke to G. F. McBride, Gazelle; a bred gilt to Samuel Sutton, Vallejo, and a daughter of Natoma's Baron Duke to Haleakala Farm, Maui, Hawaii.

H. C. Witherow, Live Oak, one of the owners of the Greenwood Duroc herd, served as judge at the late Shasta County farm bureau fair and writes as follows concerning the show: "The hog show was the strong feature of the livestock exhibit, especially in the junior pig classes of both the Durocs and the Polands, and in the senior pig class of the Durocs. W. M. Cutler and Hawes Bros. showed a number of junior pigs that would have looked good in the strong competition at the state fair. If these pigs are properly grown out, Shasta County will certainly be on the map with its Durocs and Polands. There were a number of nice Shorthorns shown, most of them by calf clubs. The first prize animals of both sexes were especially good individuals. There were only five head of sheep shown, offering no competition, but every one was of excellent quality. The advancement in pure bred livestock production in Shasta County during the last two years has been almost marvelous when it is considered that two years ago there was no good stock to speak of in the county, and apparently no inclination to get any. All credit may be given to the farm bureau and the boys and girls clubs."

Les McCracken, Ripon, reports the sale of 20 Poland China sows to a firm at Manteca recently. He is planning a January sale of 35 of his top sows. This will be a very choice offering and should be in demand at that time.

Alex D. McCarty, Modesto, has an outstanding son of Long Boy, the Williams Bros. boar, and out of a Yankee sow, that will be worth looking at any time. This pig is certainly destined to be a great boar if individuality and blood lines count for much.

J. E. Thorp, Lockeford, recently returned from a very successful season on the show circuit with his Jersey cattle and Duroc hogs. He brought three young sows home with him that he purchased from the Diamond Bar Ranch. Thorp has quite a number of young show prospects that will make him a hard man to beat next year.

Messrs. Bassett, Ross and Crawshaw, Hanford, announce February 17 as the date of their next sale of Poland Chinas. Mr. Bassett will sell 20 Percheron horses at auction the morning of the same day.

Howard Vaughn of Sacramento reports that the carload of Shorthorn bulls he exhibited at the recent Los Angeles Livestock Show was sold to the Rindge Estate of Los Angeles and will be used on their ranch near Santa Monica. Vaughn states that there is a brisk demand for good range bulls.

At the recent National Dairy Show at Chicago J. P. Phillips of Dixon won the two year old class with his great heifer, Josephine Johanna Oak De

Kol, that was grand champion at the last California state fair. Bridgford Holstein Company, Patterson, won second with the junior bull calf, King Korndyke Abbekerk Prilly, and second with the senior yearling heifer, Miss Konigen Pontiac Prilly. Following the show the Phillips heifer was sold in the dairy show sale for \$3,150 to a Maryland herd.

The feature of the Pacific International Livestock Exposition to be held at Portland, Oregon, November 13-20 will undoubtedly be Lady Milky Aaggie Pontiac, 17-month-old daughter of Lady Aaggie Echo Hengerveld, world record milk and butter cow in the senior 3-year-old class. Lady Milky Aaggie Pontiac is entered for both show and sale. Her dam, Lady Aaggie Echo Hengerveld, needs no introduction to the Holstein world; she is well known as the only Holstein living to hold as many as three world records and one of the only two living or dead, to have that honor. She was bred on Albert E. Smith's Milky Way Farm at Sumas, Washington, and was sold from there last December to Toyon Farm, Los Altos, for \$10,000 and has since been known as "The Ten Thousand Dollar Cow." The sire of the heifer is Chibmacum Spring Farm King Pontiac, well known herd sire of the Milky Way.

B. H. Wilkinson, manager of the Falfadale Farm Durocs, has picked out a fine bunch of sows and gilts which he is now breeding to Great Orion Sensation Junior, grand champion at Tulare, Los Angeles and Riverside for his bred sow and gilt sale to be held in February. Great Orion Sensation Junior sired the junior champion sow at Riverside and the reserve junior champion sow at Sacramento as well as many other prize winners.

Burr Farm of Los Angeles has just finished records on six of its foundation cows which total 96,148 pounds of milk and 16,024 pounds of butter. Cascade Johanna, an aged cow, made 22,030.4 pounds of milk and 903.82 pounds of butter. La Conner Pontiac Albino Girl, a junior two year old, made 16,378.7 pounds of milk and 681.23 pounds of butter while Duchess Orndyke Sadie Vale, who was junior champion at the 1919 Los Angeles show, and who freshened as a senior yearling, made 13,349 pounds of milk and 572 pounds of butter. With such cows as these, bred to Sir Veeman Korndyke Pontiac and King Korndyke Pontiac 20th, the Burr Farm herd will unquestionably become noted for both type and production.

California Holstein breeders will be interested to learn that the senior and grand champion cow at the National Dairy Show, Doetje Nellie Cornucopia, was at one time in the Walker herd in San Diego County. She was one of several that were purchased by Walter H. Dupee and sold to Aitken Brothers, Waukesha, Wisconsin.

Edward Morrison, who has been connected with a number of leading Shorthorn herds of this state, is now in charge of the Edinger-Johnson Company herd near Hood.

The Holsteins at Santa Anita Rancho are doing wonderfully well on their tests. Mabel Aouda has just finished a seven day test in which she made 28.85 pounds of butter from 684 pounds of milk. Anoakia Gelsche Pontiac Walker, a junior three year old, made 23.50 pounds in seven days. Blanche Nudine Clothilde Walker, the junior two year old who has just come off the show circuit, where she won a number of firsts and two senior championships and was grand champion once, has finished a seven day record of 14.62 pounds of butter eight months after calving. In her first seven months on official test she made 14,640 pounds of milk and 606 pounds of butter.

The Diamond Bar Ranch has sold Cherry Pathfinder, the under six months boar which headed their great prize winning herd of junior pigs at the fairs, to W. P. Hodge of Ilwaco. A senior sow pig sired by Mammoth Sensation Junior was also purchased by Mr. Hodge.

The ACME Cutter

Combined Silo Filler, Hay Chopper and Alfalfa Meal Machine

Alfalfa Meal attachment can be fitted to all sizes.

Here is illustrated the standard Acme Silo Filler. It can quickly be converted into an efficient hay chopper and alfalfa meal machine by using the special attachments we furnish for that purpose.

A FEW SPECIAL FEATURES OF ACME CONSTRUCTION

All steel triple frame construction
 Center hung blower fitted with six arm blower fan that will not clog.
 Big range of pulley sizes permits change in speed of cutter head and blower to suit length of cut and height of silo. All gears are well guarded.
 Soft steel shear pins through fly wheel and pulley prevent accidents to machine or operator. Reverse lever with gears enclosed in housing. No ratchet to stick at critical moment.
 Immediate deliveries.

BERKSHIRES
 LA HABRA, CAL.
 E. N. WHITMORE, MGR.

The boar is 60 per cent of the herd. We showed the 1st prize aged boar at the state fair this year. We have some of his pigs, both sexes, for sale at reasonable prices.

Castlevue Ranch Berkshires

The Home of ACHIEVER the Boar and Enhancer, the Other Boar

A few choice boar pigs for sale sired by the above boars. A few choice bred sows for sale at reasonable prices.

Castlevue Ranch

Santa Rosa, Cal.

130 Herefords Average \$372

The three day series of Hereford cattle sales held at the state fair grounds November 4, 5 and 6 can be regarded as an outstanding event in the beef cattle development of this state. Never before were so many good beef cattle of one breed offered and sold in three days. That fact in itself offers encouragement to producers and is evidence of a growing and stable demand for the better sorts of cattle. Thirty-two buyers absorbed the 130 head of bulls and females listed in the three sales for an average of \$372. While the prices paid in each of the sales can be regarded as very conservative in view of the class of cattle provided, it was felt that the values established were such as will result in a strong future demand. Most of the consignors were prepared to accept lower ratings than they have been accustomed to expect for the reason that we are just winding up our fourth dry year and the season is not far enough along to know whether the rainfall will be sufficient to provide feed. Another factor that operated to hold prices to a lower level is the money situation.

The first sale of the series was the annual fall offering of the Pacific Coast Hereford Breeders Association and consisted of 38 head of females and bulls from six of the leading herds in the West and resulted in an average of \$344. In view of the quality of the offering—which was generally regarded as the best the association has made—the prices paid were rather out of line. This sale was used by the buyers to feel out the situation, bidding was restricted throughout and the vendue suffered on that account.

The top price was \$700 for bulls and females. H. M. Barngrover of Santa Clara and John A. Bunting of Mission San Jose each furnished a bull at that price and Howard Tilton of Madrone was the buyer of each. The Barngrover bull was the senior yearling, Plumas Duke 2d, and the Bunting bull was Mission Chief that was grand champion at the 1919 state fair. The top cow, Pamella, with a carking good bull calf at foot, from the University of Nevada herd, was a real bargain that fell to J. H. Cazier and Sons of Wells, Nevada. In fact, the five lots from that institution each sold below their real values. Cazier and Sons contributed six lots that were eagerly taken by six buyers. Ed T. Morgan of Northam, Nevada, sold two lots and Chas. Rule of Duncan's Mills sold ten head of exceptionally well bred females.

J. G. Roberts of Madera, Howard Tilton of Madrone, Dr. O. I. Daley of Porterville were the heaviest buyers in that sale.

The second day was given over to the first individual sale offering ever made from the well known and popular herd of J. H. Cazier and Sons, Wells, Nevada. This firm owns one of the best collections of Herefords in the West, and the fact that a large proportion of the offering consisted of daughters of their well known herd bull, Harris Standard 2d, and were in calf to the \$10,000 Beau Blanchard 76th, furnished the incentive for the buyers to manifest a more liberal disposition in the matter of bidding. The offering was entirely worthy and this state will be the richer as most of the cattle went to California buyers.

The top of the sale established a new Pacific Coast record for a Hereford female when the good cow, Nevada 4th, a daughter of Harris Standard 2d, with an outstanding bull calf by Beau Blanchard 76th, went to E. A. Noyes and Son, Sutter, for \$2,100. It is of interest to know that the buyers refused a cash offer of \$1,700 for the calf shortly after the sale. The buyers are well known breeders and were among the most critical buyers at the sale. Besides the top female they got the second highest and the third highest priced cows in lots 24 and 8 at \$1,325 and \$1,100 each.

At this sale a new buyer, Chas. S. Howard of San Francisco, made his debut and selected six head of the better things. Rick De Bernardi of Reno, Nevada, was after the good ones and selected eight head to add to his good herd. H. J. Buchenau of Daulton Station bought four head of females. The 50 head, 46 females and

four bulls, sold for an average of \$488.

The third sale consisted of 42 head of bulls and females offered by Barngrover and Wright of Santa Clara. This offering was mostly heifers, and the fact that they came almost direct from the range to the sale, and sold rather in the rough, served to hold their values down to an average of \$274. The sale also suffered by being the last of the series, as many of the buyers present the first two days did not stay over. It is quite certain that the buyers secured many bargains and because of the exceptionally good pedigrees back of the cattle they will prove profitable investments. C. H. Nortridge, Banta, and Ed T. Morgan of Northam, Nevada, were the two leading buyers, the former getting 16 head and the latter 11. Other prominent buyers were: J. F. Dunne, Gilroy; Howard Tilton and J. G. Roberts.

All three of the sales were merged by C. L. Hughes of the California Breeders Sales and Pedigree Company, Sacramento. Col. Ben A. Rhoades of Los Angeles was the auctioneer and he was assisted by the veteran breeder, Frank W. Van Natta, formerly of Indiana but now living at Upland; W. H. Case, representing the American Hereford Cattle Breeders Association, and John A. Bunting, secretary of the Pacific Coast Hereford Breeders Association.

A complete list of the sales follows:

H. M. Barngrover Consignment

1. Plumas Duke 2d (bull), December 1918, Howard Tilton, Madrone, \$700.
2. Ann Bly 2d, February 1916, Wm. Briggs, Dixon, \$385.
3. Patricia Sue, January 1919, Dr. O. I. Daley, Porterville, \$300.
4. Ada Elinore 3d, October 1918, Nortridge Bros. Banta, \$300.
5. Inez Donald, March 1916, Howard Tilton, \$325.
6. Miss Repeater 100th, March 1914, Howard Tilton, \$260.
7. Miss Perfect 2d, February 1917, Dr. O. I. Daley, \$200.
8. Miss Tempter 19th, September 1917, Howard Tilton, \$225.
9. Goldie Perfect, October 1917, J. H. Cazier and Sons, Wells, Nevada, \$300.
10. Kate Fairfax, March 1915, Dr. O. I. Daley, \$250.

John A. Bunting Consignment

12. Mission Chief (bull), January 1919, Howard Tilton, \$700.
13. Carnation 2d, September 1914, Howard Tilton, \$425.
14. Trixie January 1919, J. G. Roberts, Madera, \$150.
15. Miss Gay Lad 51st and b. c., March 1917, Howard Tilton, \$300.
16. Lady Ranier and c. c., May 1916, H. M. Barngrover, Santa Clara, \$490.

John H. Cazier & Sons Consignment

17. Lady Generous, February 1919, Ed T. Morgan, Northam, Nevada, \$225.
18. Bearer 2d, August 1918, Dr. O. I. Daley, \$360.
19. Eldena 2d, April 1918, H. J. Buchenau, Daulton Station, \$250.
20. Carnation Girl, April 1914, E. A. Noyes & Son, Sutter, \$475.
21. Tulasco Lass and c. c., October 1914, H. M. Barngrover, \$475.
22. Begin and c. c., April 1914, J. A. Niles, Porterville, \$300.

Ed T. Morgan Consignment

23. Angel, April 1917, Wm. Briggs, \$325.
24. Riverside Waxy, May 1919, J. H. Cazier & Sons, \$300.

Consigned by Chas. Rule, Duncan Mills

25. Rosemont 20th, June 1919, J. A. Niles, \$355.
26. Marian C. P., May 1914, Wm. Bemmerly, Woodland, \$375.
27. Substitute, J. G. Roberts, \$175.
28. Sonoma Lady, March 1918, Howard Tilton, \$200.
29. Sonoma Lass 4th, March 1918, J. G. Roberts, \$250.
30. Sonoma Lass, April 1918, J. G. Roberts, \$250.
31. Eva Gleed 5th, March 1917, J. G. Roberts, \$200.
32. Celeste 2d, June 1917, J. G. Roberts, \$350.
33. Mytila, March 1915, J. G. Roberts, \$300.
34. Belle Sonoma, April 1918, Howard Tilton, \$235.

Consigned by University of Nevada

35. Mojave, September 1918, Howard Tilton, \$370.
36. Ormonda, October 1918, Jay G. Brown, Porterville, \$310.
37. Pamella and h. c., May 1915, J. H. Cazier and Sons, \$700.
38. Washoe Sahrina, September 1914, H. M. Barngrover, \$325.
39. Nevada Sahrina, May 1912, Jay G. Brown, \$450.

J. H. Cazier & Sons Sale

1. Bonnie Lass 12th, September 1918, H. J. Buchenau, Daulton Station, \$425.
2. Bambo 3d, October 1918, Rick De Bernardi, Reno, Nevada, \$400.
3. Juliet 4th, November 1918, Rick De Bernardi, \$300.
4. Belted 2d, September 1918, Chas. S. Howard, San Francisco, \$320.
5. Beladonna 2d, October 1918, F. W. Hoffman, Byron, \$375.
6. Nevada 4th and bull calf, September

- 1917, E. A. Noyes & Son, Sutter, \$2,100.
7. Artemisa, June 1918, Chas. S. Howard, \$660.
8. Marianne, June 1910, E. A. Noyes & Son, \$1,100.
9. Bonnie, November 1918, H. J. Buchenau, \$325.
10. Lorna Doone 8th, November 1918, Chas. S. Howard, \$320.
11. Batton and cow calf, March 1914, F. W. Hoffman, \$600.
12. Beyond and cow calf, June 1914, Chas. S. Howard, \$575.
13. Berob and bull calf, May 1914, Howard Tilton, Madrone, \$425.
14. Bat, March 1914, R. J. Prewitt, Antioch, \$525.
15. Banjo and cow calf, March 1914, Chas. S. Howard, \$725.
16. Olita 2d, June 1918, H. J. Buchenau, \$350.
17. Honora 5th, April 1918, H. J. Buchenau, \$385.
18. Bat 2d, June 1918, Moulton Warner, Cool, \$335.
19. Basal 2d, November 1918, W. S. Walters, Healdsburg, \$250.
20. Berob 2d, November 1918, Rick De Bernardi, \$225.
23. Circe 5th, April 1919, Dr. O. I. Daley, Porterville, \$625.
23. Carnation Girl 2d, September 1918, E. A. Noyes & Son, \$1,325.
25. Circe 4th, June 1917, R. J. Prewitt, \$575.
26. Benight, April 1914, Moulton Warner, \$485.
27. Batsman 2d, March 1918, R. W. Weldon, Toll House, \$310.
28. Columbia 6th, June 1919, E. A. Noyes & Son, \$300.
31. Benediction 2d, August 1919, E. A. Noyes & Son, \$250.
32. Eulalie 4th, April 1919, Moulton Warner, \$250.
33. Ailsa 5th, April 1919, Nicholas Tavale, Cement, \$275.
34. Louise 5th, January 1919, Rick De Bernardi, \$285.
35. Benight 2d, June 1919, Rick De Bernardi, \$360.
36. Juneatta 3d, March 1919, J. G. Roberts, Madera, \$290.
37. Batton 2d, October 1918, Jay G. Brown, Porterville, \$390.
38. Olivia 5th, September 1918, Rick De Bernardi, \$385.
39. Bias 2d, August 1918, Finnell Stock Farm Co., Galt, \$500.
40. Corinna 4th, September 1918, Chas. S. Howard, \$260.
41. Beck 2d, October 1918, Dr. O. I. Daley, \$200.
42. Donna C., July 1918, Dr. O. I. Daley, \$850.
43. Duma and bull calf, September 1917, Rick De Bernardi, \$600.
44. Back 2d, August 1918, Jay G. Brown, \$525.
45. Benight 3d, June 1919, E. A. Noyes & Son, \$500.
46. Baptist 2d, July 1918, Rick De Bernardi, \$360.
47. Bazar 2d, September 1918, W. S. Walters, \$310.
48. Backslider 2d, October 1918, F. W. Hoffman, \$400.
49. Bonnie Lass 7th, April 1914, R. J. Prewitt, \$300.
50. Dew Drop, January 1918, E. A. Noyes & Son, \$900.

BULLS

21. Nevada Lad 120th, February, 1920, W. S. Walters, \$335.
22. Nevada Lad 100th, September 1919, J. G. Roberts, \$550.
29. Nevada Lad 82d, May 1919, Moulton Warner, \$425.
30. Nevada Lad 72d, March 1919, W. L. Bergstrom, Pleasanton, \$550.

Barngrover & Wright Consignment

1. Miss Perfect 8th, February 1918, T. C. Raney, Toll House, \$300.
2. Miss Perfect 10th, March 1918, C. H. Nortridge, Banta, \$265.
4. Miss Columbus 3d and bull calf, March 1918, Ed Morgan, Northam, Nevada, \$300.
5. Miss Tempter 22d, July 1918, J. F. Dunne, Gilroy, \$300.
6. Miss Perfect 12th, June, 1918, R. W. Weldon, Toll House, \$290.
7. Miss Columbus 6th, August 1918, Howard Tilton, Madrone, \$375.
8. Miss Gay Lad 54th, September 1918, C. H. Nortridge, \$285.
9. Miss Fairfax 3d, November 1918, J. F. Dunne, \$295.
10. Miss Fairfax 4th, November 1919, J. F. Dunne, \$300.
11. Miss C. 10th, January 1919, Ed Morgan, \$300.
12. Miss Fairfax 5th, January 1919, J. F. Dunne, \$285.
13. Miss Perfect 13th, January 1919, C. H. Nortridge, \$225.
14. Miss Perfect 14th, January 1919, C. H. Nortridge, \$225.
15. Miss C. 11th, January 1919, Ed Morgan, \$285.
16. Miss Fairfax 7th, January, 1919, J. F. Dunne, \$300.
17. Miss C. 12th, January 1919, C. H. Nortridge, \$285.
18. Miss C. 13th, January, 1919, Ed Morgan, \$300.
19. Miss C. 15th, January 1919, C. H. Nortridge, \$275.
20. Miss C. 16th, February 1919, C. H. Nortridge, \$250.
1. Miss C. 17th, March 1919, R. W. Weldon, \$300.
22. Miss C. 18th, March 1919, J. G. Roberts, Madera, \$260.
23. Miss C. 19th, March 1919, Ed Morgan, \$290.
24. Countess, December 1915, C. H. Nortridge, \$285.
25. Miss Gay Lad 50th, March 1917, Howard Tilton, \$235.

"RED TOP" STEEL FENCE POSTS

America's Foremost Fence Post

The "Red Top" Steel Fence Posts have earned the right to be known as the world's foremost fence post.

Millions of these permanent steel fence posts have been installed on Government property, along the right-of-ways of leading railroads and on thousands of America's best farms.

The "Red Top" has answered the every requirement of the three general classes of post users. It has given continuous satisfactory service under most adverse conditions and in each case it has made good.

Natural enough that today it is recognized as the world's standard fence post.

Know this superior steel fence post. Identify it by the "RED TOP."

"Red Top" Fence Posts drive like a stake—Anchor like a rock—no concrete used for line posts.

Still Work for the Red Cross

The Red Cross during the 39 years of its existence has given relief in 250 floods, fires, tornadoes and other unavoidable disasters and directed the expenditure of approximately \$13,000,000 in this emergency work.

Budget for the year ending June 30, 1921, calls for \$48,200,000. During last year cost of administration was 3.3 cents out of every dollar expended. All other expenditures went direct to relief work.

Sign and send blank to American Red Cross National Headquarters, Washington, D. C. so as to reach Washington before November 25, or pay dues to nearest Red Cross chapter.

FLAX MAY COME BACK

We have from Robert E. Jones of the Sutter Basin Company statement which follows, in effect that flax may come back. We surely hope it may, for flax should be grown with profit and make a valuable addition to our crop rotation. However, there are obstacles to overcome. Mr. Jones writes:

An experimental plot of 20 acres of flax is to be planted during the coming season by the California experiment station in Sutter Basin 20 miles northeast of the university farm at Davis. Professor George W. Hendry of the agronomy division at Davis is in charge of the project.

Because of the high market price of linseed oil, Professor Hendry states that there is excellent promise of a revival of flax growing, which at one time had a definite place in California's agriculture. The planting of 20 acres is to be made in cooperation with the Sutter Basin Company.

"Flax has been grown experimentally at the university farm for about six years," said Professor Hendry in discussing the crop. During the period we have tested more than a score of oil as well as several fiber producing varieties, and have found that by proper choice of varieties and proper culture methods, satisfactory and profitable yields of flax seed may be produced in the vicinity of Davis without the aid of irrigation.

"About 20 years ago California produced annually in the vicinity of 30,000 bushels of flax seed. The principal areas of origin were Rio Vista, Biggs and Pescadero. The seed was of good quality, and the Pacific Oil and Lead Works of San Francisco took the entire product at good prices. The total production, however, was not sufficient to warrant the operation of the mill in San Francisco, and this firm, which was the principal buyer, discontinued buying seed. Since that time there has been no market for flax seed in this state and consequently there has been no commercial production. Farmers producing flax seed at the present time would be under the necessity of shipping their seed to the Portland Linseed Oil Works at Portland, Oregon. This concern is now using about 1000 bushels daily and is receiving the seed principally from Montana and northern China. The prevailing market prices make flax seed production remunerative to the farmer.

"Satisfactory yields have been obtained at the university farm by drilling the seed in a well prepared fall plowed soil, during the month of February, using an ordinary grain drill, set to drop about 30 pounds of seed per acre. Summer fallowed lands may be fall planted successfully soon after the first fall rains, since flax is a hardy crop and will withstand as much frost as barley.

"Yields at the university farm have ranged from 500 to 1,500 pounds of clean seed per acre, depending upon variety and season. February seeded flax is in condition to harvest during the latter part of June and may be cut with an ordinary grain or rice binder or with a combined harvester modified for the purpose. Bound flax may be threshed in an ordinary grain separator and must be recleaned prior to shipping to the crusher.

"This office is planning to plant about 20 acres of flax in cooperation with the Sutter Basin Company next Spring. We are also doing some work at the present time in the utilization of the flax straw after harvesting, as a by-product to be used in the manufacture of electrical insulating paper."

Touching again upon the obstacles to be overcome, we may refer to the first one as that of market. Under present conditions in California it would hardly be wise to take up flax or flax seed production excepting experimentally under contract.

Wishing information along the marketing line, we have written the Pacific Oil and Lead Works at San Francisco as to outlet for fiber or seed and have the following:

"We purchase seed for our mills in Portland, Oregon, where a ready market for the seed can be found. On today's market we would be willing to pay 4 1/2 cents per pound net weight delivered Portland, Oregon.

"It is impossible to raise flax seed both for seed and for fiber, for the reason that the seed must be thoroughly ripe to have a value for oil

SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards 6 times a year they will not be affected by MILD-EW or RED SPIDERS. ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand and Fleur de Soufre, packed in double sacks, are the fluffiest

and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH. VENTILATED Sublimed Sulphur—Impalpable Powder, 100% pure, in double sacks, for Dry Dusting and making Paste Sulphurs.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men \$5 per day for making the solution and applying same.

To create additional available plant food and prevent smut in grain, drill into the soil 110 pounds per acre of TORO BRAND SPECIALLY PREPARED AGRICULTURAL SULPHUR—or our DIAMOND "S" BRAND REFINED POWDERED SULPHUR. This soil treatment has increased various crops up to 500%. Send for Circulars No. 6, 7 and 8.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur, Mixtures, etc.

Carried in stock and mixed to order.

SAN FRANCISCO SULPHUR CO.

Big Money Boring Wells

Have water on your own farm. In spare time make wells for your neighbors. It means \$1000 extra in ordinary years, double that in dry years. No risk—no experience needed. Outfits for Getting Water Anywhere. Earth augers, rock drills and combined machines. Engine or horse power. Write for easy terms and free catalog. LEE MFG. COMPANY Box 716 Clarinda, Iowa

milling, and when the seed is thoroughly ripened the fiber is so brittle that it is only good for paper manufacturing afterward.

"We do not believe that for paper manufacturing the fiber would be of value in California, on account of the freight to the paper mills being more than the value of the straw. We do not know of any mills in California that crush flax seed."

Book Review

SOIL ALKALI

"Soil Alkali, Its Origin, Nature, and Treatment," by Franklin Stewart Harris, director Utah agricultural experiment station. Published by John Wiley & Sons, New York.

This book is dedicated to Dr. John A. Widtsoe, well known to many irrigation and semi-arid section farmers. It has special interest to the Pacific Coast for it discusses problems with which many farmers have to deal. In fact, alkali is becoming a vastly more perplexing problem than was anticipated a few years ago. It was felt that, while fairly expensive, one method always offered itself. That method was drainage, but the best drainage systems have in some cases failed of successful operation. Test has been made in this state, where a section of land was underlaid with a very extensive drainage system some years ago, but the land is still barren. The University of California has made extensive investigation and has passed to Californians some of the information gathered from these investigations in the form of circulars and bulletins, the last of which is Circular 219, issued last May. This is on the "Present Status of Alkali" and is by Dr. W. P. Kelley.

Dr. Harris' book will prove valuable in the present discussion. The book consists of 16 chapters touching upon description of alkali lands, origin of alkali, nature, toxic limits, vegetation as an indicator of alkali, chemical methods of determining, relation of alkali to physical and biological conditions, movement through soil, methods of reclaiming, practical drainage, crops fitted to alkali lands and other live questions. The book has 260 pages and is liberally illustrated. We quote from the author's preface:

"The study of soil alkali is by no means simple nor have all the problems relating to it been solved. The many different salts involved, each with its own properties; the various types of soils in which these salts occur, all with different textures and composition; the complex relations between the soluble salts of the soil and the plants growing on it; and the several economic factors involved in the reclamation of alkali land: these and numerous other considerations make the problems connected with soil alkali as difficult to solve as any found in agricultural science.

"The excuse for writing a book on a problem that is so far from solution is found in the great demand that exists for one volume containing the important information concerning alkali. At present the literature of the subject is very much scattered and is largely unavailable to the average student of soils."

WORK IN FORESTRY

The forest school in the state college of agriculture is under the charge of Prof. Walter Mulford and has under way a number of useful studies in California.

One is a study of the growth and yield of various species of eucalyptus. It is plain that much more planting of these trees, and also of the best acacias, may be expected in our foothills and on lands unfit for profitable agriculture.

Another topic deals with species suitable for windbreaks in this state and that is an important subject upon which much has been hastily said without sufficient experimentation.

Turning to the needs of our lumbermen, we note that Captain Donald Bruce of the forest school is now preparing studies of factors affecting cost of log making and skidding; also volume tables of California species of timber trees, and lastly, a study of forest growth (increment) on cut over lands. The value of this last will be best understood if the reader thinks of the vast areas of such lands which must be restored to full usefulness by

either the government or private parties.

The national forests are constantly at work accumulating data for technical and scientific publication. One on the second growth yellow pine in the Sierra Nevada has been going on for years in several forests.

Many readers are interested in the various investigations of grazing and livestock conditions in different forests. Twenty-eight or more such studies are reported in the August "Bulletin of the National Research Council," published by the government. They deal with artificial reseeding of ranges with new varieties of grasses, alfalfas, etc., with burned over ranges, rotation grazing, with all of our native forage plants, and with the effects of grazing on stream flow erosion, timber cover, rainfall, etc. They especially consider methods of handling livestock.

One study is devoted to coyote proof enclosures, and a very able one takes up the improvement of grade of stock and increasing the calf crop. Some forests are investigating the pos-

sibilities of browse range, and this subject will be taken up in California also. Of course a point of much importance to stockmen, carrying capacity, is nowhere neglected. Neither is the eradication of poisonous and worthless plants from every range neglected. In fact, a great deal is being done in this last line which has been put up to grazing rangers and experts from a great many mountain ranges, especially meadows, these 25 years. The thought behind this and all other studies which forest workers take up is that we must have the fullest utilization of all material—must "cut out the waste."—Charles H. Shinn.

Tests made by the United States department of agriculture with 130 lots of Australian wheats recently introduced into this country have brought out three varieties adapted for growing on the Pacific Coast, where they have produced larger yields than some of the native commercial varieties. They are known as Federation, Hard Federation, and White Federation. The Australian

varieties in general are susceptible to most cereal diseases, but many of these are not destructive in the Pacific Coast region.

From 1,000 to 2,000 tons of tomato seeds go to waste each year in the big puiping plants east of the Mississippi River. Investigations by the United States department of agriculture indicate that they can be profitably recovered and converted into an edible oil and a press cake or meal for stock feed, with a gross return of more than \$85,000 and a net of about \$35,000. Plants would operate two months a year on tomato seeds and might be used for grape and pumpkin seeds in addition, reducing the overhead.

Farming is just one emergency after another; so the successful farmer is the one who is ready for any emergency.

Profitable farming is a matter of business and farms can be most successfully operated only on a sound business basis.

Why the U-Frame Adds to Wallis Power

The U-shaped frame of the Wallis is typical of this tractor's sensible design. Yet, it required exhaustive experiments to develop this exclusive frame, simple as it is.

To the Wallis this "U" frame gives a solidity and rigid strength best obtainable in this method of construction. There is a noticeable freedom of vibration, too, whether the Wallis is pulling a load or working on the belt. With this U-frame the Wallis is lighter in weight than any tractor of its class.

This ideal combination of great power with light weight makes the Wallis

AMERICA'S FOREMOST TRACTOR.

The U-frame is but one of the many desirable features to be found only in the Wallis. Years of untiring research and experience with the problems of tractor building and operation have placed Wallis in a leading position. Wallis power means *more acres per hour*, whatever the field or belt operation.

Let us tell you more about Wallis—what it does—how it is built—how it means bigger, better crops and more profits to thousands of farmers. Inquiries will receive prompt response. Also visit the nearest Wallis dealer.

J. I. CASE PLOW WORKS COMPANY, Dept. A3182 Racine, Wisconsin

WALLIS

—more acres per hour

NOTICE: We want the public to know that the WALLIS TRACTOR is made by the J. I. CASE PLOW WORKS COMPANY of Racine, Wisconsin, and is NOT the product of any other company with "J. I. CASE" as part of its corporate name.

Some of the finest dairies in the state. **Chas. McNeely, Alhambra, California.**

For Sale—55 acres of A-1 land near school and good town, near high school. Water goes with land. 30 acres of this land good for fruit or vines. Nine year mules, two good saddle horses. **Chas. Hubbard, Riverdale, California.**

For Sale—By owner. 160 acres deep peat soil, buildings, orchard, riparian water rights. With or without stock and equipment. **W. D. Nichols, Box 62, Bishop, California.**

For Sale—Ranches, Homes, Acres, free list. **Wilson Bros., Santa Cruz, California.**

Bishop Land Co. can furnish from 5 to 1200 acres of the best land in the Valley. Address **Bishop, California.**

Irrigated Farms—Five acres and up. **Alex. Murdock, Brentwood, California.**

SEEDS AND PLANTS

Strawberries—Carolina and Superb, two of the leading everbearing varieties, and heavy producers, particularly the Carolina. Berries large, firm and of good flavor, \$3.00 per 100 and \$25.00 per 1000. Also, Brandywine and Klondike, \$2.50 and \$20.00. All stock offered strictly first-class, prices **F. O. B. HARRIS SEED COMPANY, San Diego.**

Strawberries—1,000,000 plants leading varieties; 200,000 Cuthbert raspberry; 100,000 Black Cap Tips; 100,000 Loganberry tips. Order now low prices. Also 100,000 choice peach seedlings—will graft in plums or prunes on contract for fall delivery 1921. **Lafayette Nursery Company, Lafayette, Oregon.**

For Sale—Best rooted grape vines of Thompson, Malaga, Emperor, Sultan, Muscat and Fig Trees of Callmyrna, Black Mission, Adriatic and red wonderful Pomegranate Trees at cheap prices. This stock is growing at Madera, Delano and Cutler. **P. O. Box 605, Dinuba, California—S. K. Hahn and Company.**

Strawberry Plants—They go fast but still have a few thousand left, at reasonable prices of following varieties: Federal, an Everbearer and strong plant Brandywine, an old stand-by; Marshall an early and good bearer; Klondike, good easy to clean berry. Address: **H. D. Radelett, Springville, California.**

For Sale—Strong Mountain Grower Brandywine, Carolina and Klondike strawberry plants at two dollars per hundred, postpaid. **B. BRYAN, Camp Baldy, California.**

Cory Thornless Mammoth Blackberry—Strong plants; dozen \$3.00 postpaid. Also have phenomenal Loganberry, gooseberry, currant, and Giant Crimson rhubarb. **MOUNTAIN PASS NURSERY, Jamestown, California.**

Cory Thornless Mammoth—Largest and best blackberry; ripens early; few seeds. Write for descriptive price list. Get plants from **William Mortenson, Route A, Box 209, Lodi, California.**

For Sale—Strawberry, Rhubarb plants. Will make special rates in quantity lots. **J. A. Schoonover, 105 N. Alameda Street, Alhambra.** Phone 76 Alhambra.

Brandywine and Banner Strawberry Plants, prices reasonable. **Lon King, 158 West Fourth, Riverside, California.**

Pumpkin Seed—Mixed Pumpkin Seed good germination, 25¢ per lb. **Aurora Seed Mill, Stockton, California.**

Strawberries—Plant 'em now. **Cash Nurseries, Sebastopol.**

MISCELLANEOUS

WANTED DAIRY HERDS
to consume our alfalfa hay. Dairy opportunities unexcelled on the Newland Project. Never failing water supply, great variety of crops. 1920 alfalfa crop 100,000 tons. Ideal climate. Good dairy market. Leasing opportunities or feeding contracts available. Address: **NEWLAND PROJECT ALFALFA ASSOCIATION, Fallon, Nevada.**

Powerene Is Equal to Gasoline at 5¢ a gallon. Salesmen and agents wanted. Exclusive territory granted. Powerene is guaranteed to be harmless, to remove and prevent carbon, doubling the life of all gasoline motors, saving repairs, adding snap, speed, power. An amount equal to 20 gallons of gasoline sent to any address in the United States, charge prepaid, for \$1.00. **W. Porter Barnes, Box 424A32, Santa Rosa, California.**

Have Cash Buyers for salable farms. Will deal with owners only. Give description and cash price. **Morris M. Perkins, Columbia, Mo.**

FERTILIZER

Gypsum and Lime—Price Right. Order early for prompt delivery. **H. B. Matthews, 1010 N. Madison Ave., Pasadena.**

RABBITS

Pedigreed Flemish Giants—Also Utility stock. No fancy prices. **MAUI BEECHING, 1578 W. 46th Street, Los Angeles, California.**

FOR LEASE

Farm For Lease—My ranch of 320 acres near Daguerre, California. 45 acres under cultivation, 5 acres in alfalfa, 1 acre in orchard, balance in grain and cotton. Abundance water, good farm buildings, implements, furniture, horses. Will lease for one to three years on very favorable terms to experienced farmer. Address S. Odell, 524 Van Nuys Bldg., Los Angeles.

For Rent—Sugar Beet, Barley and Alfalfa Land for rent. Have also for sale one 75 H. P. and two 60 H. P. Tractors Montana Land Company, Hynes, California.

LIVE STOCK

BUTTE CITY RANCH
Shorthorn Cattle, Shropshire Sheep, Berkshire Hogs, Shetland Ponies, Bronze Turkeys, White Plymouth Rocks. Stock for sale at all times. W. P. Dwyer and W. S. Guilford, Box C, Butte City, Glenn County, California.

One Registered Two Year Old Shropshire Ram—Prize winner at eastern state fairs. Also took first prize at L. A. livestock show. W. A. Barber, 507 Amethyst Street, Station T, Rose Hill, Los Angeles.

Duroc Hogs and Shropshire Sheep. Pure bred stock for sale at all times. J. J. Prendergast, Redlands.

SALESMEN WANTED

Men with Spare Time—Ranchers especially, can find excellent remunerative proposition, salary guaranteed, working for an old reliable California company. Turn your spare time into cash. Write J. H. Yetter, 115 1/2 North Broadway, Los Angeles.

FOR EXCHANGE

For Exchange—80 acres improved land, 7 miles from Brawley. Owner wants to trade for going poultry ranch. Address: Hovley-Muncey Realty Co., 1123 South Los Angeles Street, Los Angeles, Calif.

MARKETING EXTRACTED HONEY
By G. W. Bercaw

Advertise strictly pure, edible honey, then supply this honey when demand comes. Put it up in packages or containers adapted to your trade. Put up only the best of good body and lightest color. It is not essential that it be "water white"—light orange tinge will sell just as readily and quickly. Use either glass or tin containers. Do not put comb honey in glass containers with extracted. Do not advertise "strained honey," and as far as you possibly can discourage your local grocer from doing so. Call it "extracted." Glass can be used for samples and local store trade; for one's own trade, however, glass cannot be successfully used in parcel post, express or freight shipments. Label the container to show exact weight of honey to comply with the national law, as well as the local laws of many states. "Safety first" is a good rule to follow.

I want to caution all to sell pure, fully ripened honey, not a lot of green stuff, semi-cured, unsealed, mixed with milky brood, such as the writer has seen produced in some of our bee yards of late. Right here is the strong argument in favor of using queen excluders to keep the queens out of the surplus honey production super.

TREATMENT OF BEE DISEASES

T. O. Andrews, inspector of apiaries of Riverside County, sends to Riverside beekeepers the following suggestions as to disease control:

Diagnosis of American Foul Brood
First stage noticeable when larva is full grown, just before cap is put on cell. Color light brown.

Second and most easily detected stage: Larva decaying, begins to dry down into a putrid mass; dark brown (coffee color), and of foul odor. Isropy when tried with a stick. (Roping out two to six inches, very thin line thread which does not easily break, like fresh rubber, as distinguished from ropiness of European foul brood, which is more like a piece of rotten rubber.) This ropiness of the dead larva is the characteristic test of American foul brood.

Treatment of American Foul Brood

It is useless to try to treat any of the bee diseases with drugs or chemicals. The time to treat bee diseases is during a honey flow. The earlier in the season disease is detected and treated the better it is for all concerned.

If colony is weak it is better to destroy brood, bees and honey by burning. The hives may be disinfected with fire or boiling lye water and used again.

If the colony is strong, shake the bees into a clean hive and compel

them to build combs. This comb building will cure the disease. If proper care is observed in handling the infected parts so as not to spread the disease. In extracting the honey and rendering the combs, great care should be taken not to spread the disease. Disinfect the hive in all its parts with fire or lye water.

Diagnosis of European Foul Brood

The disease affects the larva at the time when it is still curled up in the cell; that is, younger than the period at which American foul brood does its work. The characteristic test of European foul brood is a decided yellow or grayish color in the dead larva, which appears as a moist, collapsed mass; as if it had been melted.

Treatment of European Foul Brood

Remember that drugs and chemicals are useless in the treatment of bee diseases, and that there should be a honey flow in order to treat successfully. With European foul brood it is not necessary to destroy the bees or the brood combs, or any part of the hive; but it is necessary to requeen the colony, using good Italian stock.

If the colony is weak, unite with other diseased colonies until you have a reasonably strong colony. If there is but one diseased colony, and that is very weak, it would be better to destroy the bees, brood and combs rather than to take chances of spreading disease by treatment.

When a strong colony is infected with European foul brood, or enough weak colonies have been united to make a reasonably strong one, remove the queen and let the colony remain without a laying queen for at least ten days. If the queen is an ordinary black or hybrid, kill her; if she is of valuable Italian stock, make a nucleus for her and at the end of the ten days introduce her to her cleaned-up colony.

ORGANIC FERTILIZER

By A. Layman

WITH the mounting cost and decreasing supply of stable manure, also of bean and other straws, the fruit grower who finds it necessary to restore his soil will be glad to know that one source of fertility is indicating a material lowering of price.

Cottonseed meal, rich in nitrogen and containing a small quantity each of phosphorus and potassium, may now be had at nearly a third its price a few months ago. This is a California product, so it is right at our doors. As we have often said, the most satisfactory way of using such a fertilizer is to have a few dairy cows on the place, feed the cottonseed meal to the cows and later secure practically 80 or 85 per cent of its original fertility value and place on the soil of the orchard. But even without securing this double duty we believe that cottonseed meal is a very economical soil restorer when applied direct so long as it can be had at present day price.

There are literally thousands of tons of cottonseed meal in Southern California and a home use should be made of it; 35,000 tons of meal will be available from the Imperial Valley alone. There are now three mills busily engaged in the manufacture of oil and, of course, its waste, the cottonseed meal, and shipments are made of the prepared meal direct to the ranches, for there are other mills in Los Angeles with large output for nearby gardens and orchards, but unfortunately, in addition to our own home use a market is being secured for part of it in middle Europe, and shipments have been made from Los Angeles harbor. This is carrying a much needed soil fertility possibility away from our own orchards. It would make an ideal application to orchards carrying cover crops. The roots of the cover crop would aid in reducing the meal to nitrates and phosphates and secure fullest use of the fertility at the time of setting fruit in the spring.

The nitrogen in cottonseed meal is not so quickly available as in nitrate of soda or even sulphate of ammonia, but with right soil conditions it soon becomes available and has one advantage in that it carries a small portion of vegetable matter which will result in humus. One may apply, according to the needs of the orchard, from 500 to 1,000 pounds to the acre.

In summarizing some of the advantages of cottonseed meal Prof. Lipman in Bulletin 260 of our state agricultural experiment station says that the nitrifiability of nitrogen in cottonseed meal has been remarkably shown in a series of experiments conducted at the station. "But one soil in 29 showed total lack of power to nitrify cottonseed meal nitrogen." * * * "The most ready and most economical transformation of nitrogen into nitrate is accomplished by soil flora in our soils with the so-called low grade form of nitrogen fertilizers like cottonseed meal, steamed bone meal, goat manure, garbage tankage and sewage sludge."

Touching upon the value of cottonseed meal, or rather of the readily available nitrate carrier, a bulletin of the Texas Industrial Congress calls attention to its value for grassland regarding which the proverb says: "No grass, no cattle; no cattle, no manure; no manure, no crops." And the bulletin follows with this suggestion: "Remember that if the land contains a properly balanced fertilizing ration and has been thoroughly and constantly cultivated, so as to make this plant food available and thus keep the crop growing uninterruptedly from start to finish, it will greatly increase the grain yields and their quality, wonderfully increase the cotton yields, the length and strength of the staple (which has markedly deteriorated on account of poor seed, bad cultural methods and the poisonous habit of growing the same or a kindred crop on a given tract of land year after year), and add millions of dollars to the value of all these crops."

How Secured

Cottonseed meal is a by-product of the manufacture of cottonseed oil. The seed is taken to the mill from gins where it is stored in great warehouses, each with a capacity of about 3,000 tons. Stacks of seed in these warehouses are some 40 or 50 feet high and arranged over a trough in which is an endless carrier. The seed is fed into this carrier which takes it to the linters, operating very much as does the ordinary cotton gin, excepting as the saws are finer and set closer together. The lint still remaining on the seed is removed and baled, having outward appearance much similar to that of the ordinary baled cotton. It has, however, such short staple that its principal value is in the making of cotton batting for mattresses or, in time of war, gun cotton.

The clean seed next goes to the huller which removes the hull and delivers the kernel, or oil containing portion of the seed, to the large cooker where it makes continuous passage requiring perhaps an hour or an hour and a half. From the cooker it is drawn onto an oblong table where it is wrapped in "camel's hair cloth" and sent to the press. When this press is filled, hydraulic pressure extracts the oil, excepting that there is a loss of some 5 or 6 per cent which it is impossible to extract from the meal. From the press the slabs of meal are taken, the heavy cloth wrap is removed and the slab, of consistency of a plank, is run to the cutter where it is cut into chunks the size of a walnut or smaller. Later it goes to the crushers where it is reduced almost as fine as flour, sacked, sold to dairymen or sent to orchards or fields as fertilizer. The hulls are likewise disposed of as dairy feed.

There is nothing wasted of the "waste" products of the cotton fields of California.

SUGAR BEET GROWERS COSTS INCREASE 50 PER CENT

Sugar beet growers in Southern California delivering an average of ten tons of beets per acre, which test 13 per cent sugar, will receive nearly \$200 per acre for their crops, according to agricultural authorities at the state university. This is exclusive of possible bonuses under individual contracts.

Northern California growers will receive returns not quite so high, the amounts ranging from \$142 to \$236 per acre.

A beet crop averaging 12 tons in 1919 brought in twice the price of 1915, while operating costs during the same period increased about 50 per cent.

Advertising Market Eggs

POUTRYMEN in general have watched with great interest the advertising campaign inaugurated by the Poultry Producers of Southern California, Inc., in an endeavor to stimulate the consumption of eggs through the period of high prices, such as prevails every fall and winter.

The consuming public has always assumed heretofore that poultrymen must be coining money in the fall because the price of eggs is so high. As a result of this misinformation there has been a feeling of hostility on the part of the public, with the natural result that the consumption of eggs in many families has ceased over considerable periods. There should naturally be a decrease in consumption when eggs pass a certain price, but where there is a conscious

or an unconscious boycott destroying all consumption, then the egg producer is injured, because after the hens have begun to lay in December or January so few people are eating eggs that the market must reach a very low level before consumption is again stimulated to a point where it provides an outlet for large quantities of eggs.

Keeping this in mind, the organized poultrymen have tried out a scheme of explaining to the public the true situation and some of the difficulties which surround the production of eggs during the last three months of every year. Figures of cost have been printed in detail, and the attention of the consuming public has been called to the fact that the shortage is of comparatively brief duration, the idea being that the purchase of storage eggs would bridge over the period of a few weeks or until the hens began to lay in January.

This is the question every interested egg producer is asking, "How has it worked?" All distributors of eggs agree that the consumption of eggs in Los Angeles, price considered has been remarkable. When the break came in New York and other Eastern markets, there was little weakness on the Los Angeles market. It was only when the market in San Francisco broke as much as eight cents per dozen that it became unsafe for the Los Angeles market to occupy so high a level.

Strange conditions have prevailed

in the Middle West and farther East. The fall has been so mild for a season that in some instances poultry and cows were out on green pasture. The result has been a tremendous increase in the production of fresh eggs, which has resulted in greatly relieving the shortage which had prevailed.

This unexpected condition made it all the more necessary that a large portion of the eggs arriving in Los Angeles should find a local market because the outlet to the East was in some measure checked by the egg production mentioned above. At this writing the Los Angeles market is higher than the San Francisco market by several cents per dozen; there is a good feeling between the consumer and the producer of eggs; apparently eggs have not been banished from so many tables in Los Angeles this fall; and while it would be inaccurate to say that this favorable condition has been brought about solely by advertising, it would be equally unfair to say that the advertising of the Poultry Producers has not helped in developing the fortunate circumstances which surround the marketing of eggs in Southern California.

The effort of the organized poultrymen to reach a better understanding with the consuming public seems to have been a splendid success.

CALIFORNIA FARM BUREAU EGG LAYING CONTEST

(Continued from Page 627)

So successful was the California Farm Bureau Egg Laying Contest and so strong was the demand for a permanent contest in California that the Santa Cruz County farm bureau, in July, 1920, asked the university to take over the management. The idea

met with favor by the authorities, but the question of funds came up. The university would not be able to finance such a project at the present time. The Santa Cruz chamber of commerce immediately solved the difficulty by providing \$10,000 to purchase land and erect buildings and suitable equipment. As run the contest should be practically self supporting, but to cover any possible deficit 30 progressive poultrymen of Santa Cruz stated their willingness to stand good. The spirit of cooperation shown by the businessmen, poultrymen, builders and plumbers was ideal—almost more than could be asked—and at the present writing the plant is nearing completion and will be ready for the start of the California Farm Bureau Egg Laying Contest on November 1, 1920. The extension division of the university and the poultry division will run the contest as a joint project.

Value to State

With its ideal climatic conditions California should prove to be a leader in the poultry industry in the United States. The establishing of a permanent state egg laying contest at Santa Cruz is the beginning of the good work.

Other states have demonstrated their ability to produce good poultry under more adverse conditions than we have to meet. This ability has been made known through their egg laying contests. What poultryman has not heard of the Storrs contest or the Missouri contest records?

We believe that California has the stock, and the egg laying contest will be the means of showing the world that our belief is correct.

The contest will serve as a station at which new facts will be derived. With the birds under the supervision of a trained man data can be obtained that will work toward the betterment of the industry of the state. To quote as an example, various methods are used in culling—in general these methods may be effective, but they are only the beginnings of the road to "better stock." These general points can be studied at the contest station and actual checks made as to their comparative values. The trapnest will tell the true story. We feel that many new and valuable ideas regarding poultry will be obtained. Every poultryman will get the benefit of these findings and the industry as a whole will profit.

Value to Individual Poultrymen

Coming down to the value of the contest to the individual poultrymen: Most poultrymen will concede that trapnesting is the way to find out what the birds are doing. Often, especially to one starting in business, it is a question as to what extent he can trapnest, if at all. His time is taken with the countless details that come up. He wants accurate records on his birds, or at least on a few. So he turns to the egg laying contest where for a nominal fee his birds are trap-nested and each month he gets a detailed report of his entry. At the contest, also, his birds enter into competition with other birds and a comparison with these is of value to the owner. Even if his birds are inferior it is an advantage to him to know. At the end of a year his birds are returned and if out of his 12 he has six or even four outstanding individuals, with these as a basis he can begin breeding and building up his flock. Naturally the spirit of competition enters and what is a greater incentive in any industry than this feature? It is the natural desire of every progressive person to do better than the other fellow.

The advertising value to the individual poultryman in a contest must not be overlooked. Every week high records of pens and of individuals are published in all the leading agricultural publications, and often the records find their way into the large dailies of the larger cities. To summarize, the poultrymen can well afford to enter them for three reasons: first, to get a trapnest record on every bird for a year, the truth of which is above question; second, to compare his stock with that of other breeders; third, to get the value of publicity and advertising.

The Plant

The house, which is of the full monitor type, is ideally located near the street car line leading to the city park. It is at the intersection of three main

THE GREAT OLYMPIC FEED MILL PORTLAND, ORE.

OLYMPIC

CRATE FATTENER

With Dried Buttermilk

Rapidly Fattens Fowls

MEET the holiday demand for poultry by feeding OLYMPIC Crate Fattener containing *Dried Buttermilk*. You can increase the weight of your chickens from 25% to 50% in ten days. OLYMPIC Crate Fattener with *Dried Buttermilk* makes the meat whiter, more tender and sweeter flavored, breaking down the tough sinews and muscle tissue. You can command better prices per pound and bigger profits per bird.

A Test of Taste

An OLYMPIC crate-fattened chicken dinner, served simultaneously at three great Portland hotels, brought the following expressions of satisfaction:

"OLYMPIC crate fattened chickens are more tender and better flavored."—Hotel Portland.

"Every piece of the poultry measured up to as high a standard as the hotel could wish."—Hotel Benson.

"The dinner was served 300 guests and complimented by all."—Multnomah Hotel.

A Test of Weight

The following results were obtained by the Hazelwood Company, of Portland, a concern shipping 10,000 birds a week:

92 White Leghorns fed 100 lbs. OLYMPIC Crate Fattener with *Dried Buttermilk*, gained a total of 40% lbs.

92 White Leghorns fed 181 lbs. mixture of corn, oats and barley feed with semi-solid buttermilk gained but 32.3 lbs. in the same time, or on a 100 lb. basis, but 17.7 lbs.

The Portland Flouring Mills Co.,
Merchants Exchange Building
San Francisco, California.
C. B. Sharp, Agent.

Dried Buttermilk

The OLYMPIC Dried Buttermilk Process simply removes the 90 to 92 per cent of water, leaving the milk elements in highly concentrated form, pure and fresh for shipment, storage and feeding.

This is mixed in proper proportions with the other ingredients in OLYMPIC Dried Buttermilk Feeds.

4,200 Eggs From 48 Hens

Simply write me and I will send you a big triple size box of my famous Buttermilk Compound Tablets by return mail, postpaid. I want you to know that you can double and treble your poultry profits by doubling or trebling your egg yield—perhaps get five to seven times as many eggs as did many of my friends last winter by using these wonderful tablets. Fed in drinking water or feed. Because I want these tablets known in every township in America I say: Try them at my risk. If you like them, tell your friends. If not, you are not out a cent.

Over 10,000 People Wrote Me Last Year

Here are a few samples of the kind of letters I get from all parts of the United States.

4,200 Eggs.

I used two boxes of your tablets. Before using them got only 6 eggs a day. Within two weeks was getting 12 to 15 eggs a day. In seven months I got about 350 dozen (4,200) eggs from my 48 hens. I did not have any Roup. I give your tablets the praise. MRS. ARTHUR TUCKER, Wilkinson, Ind.

75 Eggs Instead of None.

I found the tablets were fine to start hens to laying. Before using the tablets I wasn't getting any eggs. Within 10 days after using tablets increase started. I was finally getting 75 eggs a day and fed the tablets until spring. MRS. R. H. TULTZ, Scranton, Kans.

Makes 'Em Lay in Coldest Weather.

Last winter I fed two boxes of your tablets mixed with feed. Before using tablets got only 12 eggs a day—afterward 30 to 36 eggs a day. This was within three weeks. After feeding the tablets six weeks got 50 and 60 eggs a day and in the coldest weather in winter. MRS. ELMER HOTTMAN, Ridgeway, Wis.

Best Tablets Made.

The Buttermilk Compound Tablets I think are better than the common tablets. I got more eggs within two weeks after using them. I have some other tablets but the "Buttermilk" are the best. I fed three boxes last winter. My flock did not have the Roup. Will send for more tablets. MRS. WALTER ELLIS, Gypsum, Kans.

FREE

Because I want one million new users of these wonderful tablets I am willing to send you a big triple size box if you will just write me. Your name and address is all I need. Use a postal card if you wish—I'll send the tablets by return mail, post paid. You use the tablets 30 days then report results to me. If you are not satisfied in every way—if you are not more than pleased—the tablets are to cost you nothing. But if you do find that you get many, many more eggs—probably three to five and even seven times as many—and your flock is healthier than ever before—full of pep and strutting around with healthy red combs—the tablets cost you only \$1.00. No matter what you have tried before, I want you to remember that my secret formula is absolutely different from anything else—that it has been known to succeed where others failed. Not only that—you must remember that I send you a big triple size box—nearly three times as big as the ordinary box of tablets. At any rate, the risk is all mine. You can't afford to pass up this Special Introductory offer a single minute—it may never be made again.

Send No Money — Just Write Me, That's All.

All I need is your name and address—just put it on a postal card or use the coupon below—I'll understand and send you the tablets post paid by return mail.

R. C. COMBS, Gen. Mgr., Milk Products Co.
660 Creamery Bldg., Kansas City, Mo.

As per your offer send me your big triple size box of Combs' Buttermilk Compound Tablets. I understand I may use the tablets in a 30 days' test, and if satisfied they cost me \$1.00, otherwise they are to cost me nothing.

Name

Address

B. F. D. P. O. Box

streets. The grounds comprise three acres and have a gentle slope which insures good drainage. The house is 332 feet long. A six foot aisle through the center of the house gives access to the pens on either side. The pens are 10 by 16 feet and will hold 36 birds. The birds will be run under flock conditions; this is a feature of the contest.

Each entrant sends 12 pullets, the best ten of which at any time determine his total record. This also is a feature of the California Farm Bureau Egg Laying Contest. Usually in contests two hens are set aside at the beginning as alternates and their records never count unless one of the other birds dies.

The daily records are kept on sheets which at the end of each week are summarized and weekly reports given out. From these sheets a report is made and sent to each owner at the end of each month.

Numerous other details would prolong unnecessarily an article of this kind. Suffice it to say that California now has an official egg laying contest which we hope will equal any in existence in the world.

Poultry Queries

Conducted by J. A. Koethen

Sick' Chicks

My baby chicks have watery eyes and white spots on the throat and the whole mouth seems sore. I have lost several and the whole flock seems affected. I feed warm chick mash in the morning and ground corn during the day.—Subscriber, Santa Maria.

The chicks may be taking cold but I think that warm mash they get every morning is the main cause of the trouble. If moist mash is fed to chicks and a little is left to lie in the sun for a while it becomes first sour, then moldy, and if the chicks eat it will almost certainly cause aspergillosis, which means just the growth of mold spores in the throat and lungs as well as in the food. Your chicks should have a dry mash mixture before them all day. You can buy excellent chick mashes already prepared but the one you are using may be all right if only it were fed dry instead of wet. As you do not say what the mash is composed of, I cannot help you there. Then in addition to dry mash feed some kind of chick grain in scratching litter or, if the chicks have range, in feeders. Just what you feed depends on the age of the chicks. Chicks a month old can eat cracked corn and Gyp corn and will usually eat wheat if it has been mixed with the chick feed while they are little. If you keep a good dry mash preparation before them all the time and chick feed or grain in feeders where they can find it part of the time, keep them warm at night, sheltered from the wind during the day and let them run as far and as much as they wish, your chicks will not be sick. The only cure for those that are affected lies in immediate removal of the cause.

Price for Buff Leghorn Males

Can you tell me what price I should ask for my Buff Leghorn males for breeding? They are about 200 egg type, some more and a few less. Part of them have brownish or very light tail feathers, some have five point combs, some four or six point. One of my pullets took champion pullet at the local fair, and the cock took blue ribbon.—Subscriber, Fresno.

This letter is too long to publish in full and has been answered by mail. It is enough to say here, perhaps, that in selling roosters for breeding only ribbons or reputation or egg records count. A male that has won a ribbon or a male from winning stock of known reputation can command a price as a fancy breeder, and a male who is known to be the son of a hen with a high egg record can command a good price as utility breeder. Roosters outside of this list are worth just the market poultry price in most cases. It is wasted time to try to breed utility and fancy at the same time. Breed for eggs or for feathers, but not for both. A few experts claim to have been successful, but they are very few and far between.

You Can Have Eggs All Winter-If

you give your flock a little help. It isn't a matter of chance—you'll get eggs if you work for them. And if your birds lay heavily this winter you'll take in a lot of egg-money because prices will be high. The extra eggs you can get will pay for many things you want and need.

Give your layers a chance to do their best work. Feed a good ration and include

Pratts

Poultry Regulator

the original poultry tonic and conditioner. It makes hens lay because it puts and keeps them in condition to lay—healthy and vigorous. Its natural tonics, appetizers, digestives and laxatives strengthen and regulate the internal organs—make hens healthy—then they lay. Nearly fifty years of successful use by the world's leading poultrymen proves it. And our money-back guarantee is your protection. Sold in packages, pails and sacks up to 100 lbs.

Pratts Roup Remedy

is another big aid to winter layers. Put it in the drinking water occasionally, especially during spells of bad weather. It heads off dangerous colds and deadly roup, and aids in overcoming these troubles if they appear.

"Your Money Back If YOU Are Not Satisfied"

One of the 60,000 Pratt dealers is near you.
Talk this over with him.

Healthy Hens

is the answer to heavy egg production, and in LACTEIN Condensed BUTTERMILK, the hens not only receive the tonic which keeps them in the highest state of health, but a REAL FOOD which supplies the elements of egg making material in a scientifically processed, concentrated form. LACTEIN Condensed BUTTERMILK supplies all elements most economically.

Builds Feathers—Revives After Molt

Molting time is feather-renewing and body reviving time for the hen—and as much food or more is required for this work as that of producing eggs. LACTEIN enters into the aid of nature

with a stimulation and vigor that has built its recognition as supplying tonic and body and feather-building elements better and more economical than any other food or compound.

LACTEIN CO.

Main Office and
Factory at
MODESTO, CAL.

Your LACTEIN investment will prove profitable for all year feeding—if you are not supplying your poultry with it, make the start now—your poultry supply dealer supplies LACTEIN.

NOTICE: ALL POULTRY BREEDERS AND DEALERS No More Spraying, No More Lice, No More Mites

One pair of Lice on that bird, means one hundred thousand descendants in less than two months.

The Federal Bureau of Entomology states that 99 per cent of the flocks of the country, are infested with both Mites and Lice.

The chicken infested with Mites and Lice, is from one to two pounds under normal weight.

Mites and Lice cut egg production from 25 to 50 per cent. They are the greatest enemy to the chicken industry.

The Wegner Medicated Poultry Roost will rid your flock from Mites and Lice.

It is the greatest proposition ever offered to the poultry raisers of this country.

We want every poultry raiser in the city of Los Angeles and vicinity to step into Germain's Retail Store, N.E. corner 6th and Main, and inquire about the Wegner Medicated Poultry Roosts. Will have a man there to demonstrate, on Monday, Tuesday and Wednesday, Nov. 15th, 16th, and 17th.

HAY

Alfalfa Growers of California, report under date of November 10:

Continued demand for current consumption and light offerings led to a further stiffening of prices during the week. Present prices are not high and a further reasonable advance during winter seems justified by the strength of the situation and the cost of carrying, but it would be a very great mistake to allow prices to go too high. A period of low prices would usually result in a decreased alfalfa acreage; this would be followed by a season of smaller supplies and high prices, especially during winter. The effect of these high prices would be reduction of dairy herds, and the next result would be very low prices again for alfalfa, the acreage of which had in the meantime been increased again by the short period of good prices. . . and so on in the same vicious circle by which most of the alfalfa growers were kept chronically hard up and in debt, even during the years when all other kinds of farming paid well and created prosperity for the farmers.

This year has been the first in which the association has been strong enough to be a factor in the distribution, and as a result growers received, probably for the first time in the alfalfa history of California, fairly adequate prices all through their principal selling season. In other words, the association succeeded in stabilizing the market. It is to the best interest of the alfalfa growers to stimulate as much as possible the dairy industry, and vice versa, making possible for both industries a continued steady growth on basis of assured fair returns for both. By both industries keeping step with each other, there will be no danger of overproduction for many years to come, if ever, even if the growth of these industries should in time overtake the growth of the population of the state, as there is then a wide field open for shipment of dairy products to other parts. In the meantime, however, and especially at the present stage, the association needs the full support of all the growers in a larger measure than ever before, if you want it to continue to do as much for them as it has done this year, or to put it plainly, if you do not want to go broke again in raising alfalfa. As matters stand today the alfalfa farmer in California is about the only one the price of whose product is not demoralized and below cost of production. Greater efforts on our part are therefore necessary to protect ourselves, as nobody else will protect us, but we can do it all right by increasing our membership and by establishing a comparatively modest fixed working capital which is all we need to put ourselves in a sufficiently strong and independent position. Both objects can be easily obtained without any sacrifice by our members if they will all do their part in both directions.

All hay received was readily absorbed the past week. We make note here of hay received on the tracks in Los Angeles, this does not include direct shipment from ranch to consumer.

There were 750 tons received on the tracks in Los Angeles the week ending November 6, with 80 tons left over as against 528 tons the week before.

DRIED FRUITS

Fresno, Nov. 8.—Prices for the re-

mainder of the raisin crop were officially

announced today by the California As-

sociated Raisin Company and show an

all round increase of half a cent on Mus-

cats, Thompsons and Sultanas over prices

for the first allotment. Bleached goods,

however, remain unchanged.

Independent packers who, under the

compromise reached in the suit brought

against the association by Attorney Gen-

eral Palmer, are to receive 20,000 tons of

this season's crop will, it is understood,

charge the same rate as the association.

The price list is as follows:

Prices for Crop

Muscats: Package seeded, Sun Maid,

25 pound boxes, 20½ cents a pound.

Lgose, 25 pound boxes, one crown, re-

cleaned and floated, 20½ cents a pound;

two crown, re-cleaned and floated, 23½

cents a pound; three crown, re-cleaned and

floated, 24 cents a pound.

Layers, three crown flat pack, 20 pound

COST OF RICE PRODUCTION

HE Extension Service Farm News, organ of the agricultural college of Texas, in discussing the present discouraging rice situation holds that today's quotations do not justify rice growing under Texas or Louisiana conditions. The Texas paper rather overlooks California as a rice producer. However, the discussion has a lively interest to many California growers.

To quote from the News:

There may be times when the doctors recommend men to work for their health, but it is scarcely possible that the farmers of the country are going to accept this verdict from the consuming public.

A merchant will quit business when he sees that he is losing money and seek some other occupation, and the farmers are doing the same as fast as they are made to realize the cost of production as contrasted with the market price of the commodities produced on the farm. This does not mean that the farmers will strike, but they are getting tired of working for their health. Many have already left the farm seeking profitable occupations and others will leave as fast as they can make the change or at least stop producing a surplus at a loss.

Farmers are commencing to study the cost of production and are finding out whether or not a crop is profitable, and if it does not yield a profit they will produce something which will yield a profit or cease production except for home consumption.

This seems to be about the status of the feeling of the rice growers of South Texas. In fact, in 1919 Texas planted 218,000 acres to rice and produced approximately 7,000,000 bushels of rice, valued at \$19,000,000 on a basis of \$2.80 a bushel, which are the figures given in the Year Book for 1919, published by the United States department of agriculture. Louisiana and Texas together last year produced 26,710,000 bushels of rice, which is about two-thirds of the production of the United States and was valued at \$73,014,000. This sum of money means much to the business interests and consumers in congested centers in Texas and Louisiana. Everyone who touches a dollar of it seems to make a profit except the producer. The average price of rice in 1917 was \$2 a bushel, while the average price in 1917 for day labor with board was \$1.56 as compared to \$2.45 in 1919, and without board, \$2.02 as compared with \$3.12 for the same years. The increase in wages was over 70 per cent from 1917 to 1919, while the increase in price did not reach this percentage by any means, yet the retail price at the stores was 100 per cent over the price at the mill, which is entirely too great a spread and has resulted in the consumption of rice for 1920 falling away below normal.

Knowing that it had cost as much or more to produce rice this year as it did in 1919, the Rice Growers Association felt the rice should bring at least as much as it did in 1919 and fixed \$8 a bag (three bushels) as the opening price, but the crop has not moved at that price.

Realizing that the rice growers must have a profit on their production if they were to be advised to continue growing rice, Geo. A. Smith, district agent extension service, decided to make investigations to determine the

actual cost of producing a bag of rice, so he gathered the data from a number of farmers in Jefferson County on the cost of production, with the following result:

Land preparation, \$6.75; seed and fertilizer, \$6.60; sowing and firming bed, \$1.75; pushing levees, \$3; water (regular charge), \$8; threshing and hauling, \$7.25; cutting, binding and shocking, \$6; sacks and twine, \$5.35; storage (insurance included), \$2.28; cost of work stock, \$10; depreciation, \$4.50; taxes, etc., \$2.50. Total cost, \$63.23, making an average crop of 7½ bags to the acre cost \$8.43 a bag.

Meantime J. C. Elsentraut, county agent of Jefferson County, was compiling figures along the same line from another set of data gathered from other rice farmers, as follows: Plowing, \$2.85; disking and harrowing, \$3.55; seed and fertilizer, \$6.50; planting and rolling, \$1.85; building levees, \$3; water cost, \$8; threshing and hauling to warehouse, \$7; storage, insurance and loading on cars, \$2.16; maintaining work stock, \$9; annual depreciation machinery, \$4.32; taxes and overhead, \$2; total, \$61.18, making an average crop of 7½ bags to an acre cost \$8.15 a bag.

At the same time C. Dornbos made a census of 874 acres divided into four groups of farms in a radius of 20 miles and found an average cost of \$61.15, making an average crop of 7½ bags to the acre cost \$8.23 a bag.

The cost in 1917 was \$37.53, making an average crop of 7½ bags to an acre cost \$5.01 in 1917, which was a profit of 99 cents a bag, or 33 cents a bushel at the price of \$6 a bag or \$2 a bushel.

With the present cost of production at over \$8 a bag to sell at even \$8 a bag would mean a loss to the rice growers, while a less price would cause many to go into other lines of production. Should this occur, what will become of the machinery in the rice mills and where will the employees and middlemen get their profits from handling rice? What will become of the 100 per cent profit of the middlemen?

Shall these rice farmers work for their health in the future and donate their savings to the rice production until they themselves become day laborers, or shall they seek more profitable pursuits? This is the question confronting not only the rice farmer but thousands of other farmers throughout the country.

When all farmers move to town or commence raising only sufficient produce for their own needs, what will become of the profits of the middlemen and the food for congested centers?

Farmers have commenced to investigate the cost of production. What will the answer be?

SOME CUCUMBER DISEASES MAKE ROTATION ADVISABLE

Certain diseases that affect cucumbers live over from one year to the next in the soil, investigation by the United States department of agriculture shows. A transfer to new soil each year in addition to seed treatment and spraying of the vines is found advisable to effect their control.

The ornamental wild cucumber vine is a factor in overwintering and spreading cucumber mosaic or "white pickle," one of the most serious diseases. Mosaic cucumber fruits are often deformed, mottled with green and yellow and have numerous large dark green warts. The leaves turn yellow and die, leaving stretches of white stalks.

The disease does not live in the soil, but is believed to be caused by a virus which lives over winter in the wild cucumber seed and is spread by striped beetles. The cucumber beetles feed first on the diseased wild plants in the spring and then fly to the cucumber fields. The eradication of the wild cucumber is therefore recommended.

Downy mildew is prevalent in the Eastern, Southern, and to some extent in the North Central states, west to Illinois. It is caused by a fungous parasite and can be checked by timely and thorough spraying with 4-4-50 Bordeaux mixture.

Angular leaf spot or leaf blight is caused by a bacterial parasite and is carried by the seed. It can be combated best by treating the seed in a 1-1,000 corrosive sublimate solution.

washing in running water and drying immediately. The disease may live over in the soil to a slight extent, making rotation advisable.

Cucumber anthracnose, recognized by brown dead spots on the leaves and sunken areas on the stems and fruits, is a fungous disease, which lives over winter in the soil and probably on the seed. Seed treatment and rotation are recommended.

Cucumber scab is another fungous disease, known also as spot rot and pickle spot, which occurs mainly in the northern cucumber growing sections. Stems and leaves are attacked but it is most noticeable on the fruit. The disease lives over in the soil, and crop rotation is recommended.

Bacterial wilt is caused by bacteria which live in and clog the water carrying vessels of the plants and causes them to die. The disease is carried over winter and spread chiefly by striped cucumber beetles. It may be somewhat checked by pulling and burning or burying all wilted plants as soon as they appear and by spraying with 4-4-50 Bordeaux mixture and arsenate of lead (four pounds), the spray acting as a repellent and poison to the beetles.

SUDAN GRASS WINS VALUABLE PLACE

Ten years after its introduction to the United States from Khartum, Africa, Sudan grass was being successfully grown in nearly all parts of the United States. It does not serve well either as a money crop or a soil improver, hence it may never find a permanent place in regular crop rotations. It has, nevertheless, a very important place in the farmer's second line of defense as a catch crop which can be planted to give satisfactory returns when conditions have brought failure to other hay crops. This is the verdict pronounced by the United States department of agriculture in Farmer's Bulletin 1126, recently issued.

Sudan grass is replacing millet as the premier catch crop in many localities because of its ability to produce a fair yield and a high quality of hay under conditions of low rainfall; its rather short growing season, and its ability to thrive on a wide range of soil types. Large yields of Sudan grass are obtained only on good soils, but the grass fails completely only on cold, poorly drained land.

Sudan grass produces heavily. In California under irrigation it has made yields of 9.8 tons of field cured hay an acre, when alfalfa produced but 8.3 tons under like conditions. It ordinarily yields about the same as alfalfa under irrigation in the Southwest, but Sudan grass gives its full crop in three cuttings against the four or five required for alfalfa. It is the only grass yet found which in this part of the United States ranks as the equal of alfalfa in point of yield and quality of the hay. Its record in this respect has led to its use in "patching" old alfalfa fields when the stand of alfalfa has been destroyed. In the Southern Great Plains where there is a low rainfall, Sudan grass grown without irrigation will yield from one to three tons of hay to the acre.

There are certain parts of the United States where the department of agriculture considers it unwise to depend on Sudan grass for hay. This is true of the strip of territory 200 miles wide along the northern boundary; the regions of high altitudes in the Western states; and also most of Florida and a narrow strip of land along the Gulf coast. Low temperatures prevent success with the grass in the first two regions named, and disease is the limiting factor along the Gulf coast. In a majority of the Central and Southern states, however, climatic and soil conditions are favorable to Sudan grass.

Although Sudan grass is best adapted by nature to use as a hay crop, it is also used with great success as a sowing and pasture crop for summer pastures. Its use as a silage material is limited by the fact that it is easily made into hay and fed as such with very little waste, and also because corn and sorghum both outyield it and are generally available throughout the region where Sudan grass is grown.

In the semi-arid districts the highest yields are obtained when the grass is drilled in. The advantage of the row over the drilled seedlings is so small, however, that most farmers prefer to avoid the necessity of cultivation by drilling or broadcasting the seed. A common grain drill handles well cleaned Sudan grass seed without trouble and the hay from drilled seedlings is finer stemmed and matures more evenly than row plantings.

The feeding value of Sudan grass is equal to timothy hay. In localities where soy beans or cowpeas do well these legumes may be grown in mixtures with the Sudan grass. Such a mixture produces a hay of higher feeding value than the grass alone, because of the high protein content of the legumes.

Sudan grass hybridizes freely with the sorghums. It is necessary, therefore, if pure seed is produced, to have the Sudan grass field at some distance from any sorghums, otherwise it will result in a mongrel crop the following year.

The department of agriculture's new bulletin goes very thoroughly into the details of cropping, planting, harvesting—both for hay and for seed—as well as the best methods of feeding the hay to livestock.

CLICK O' THE LATCH

The silence holds for it, taut and true;
The young moon stays for it, wistful white;
Winds that whimpered the sunset through,
Sigh for it, low and light.

Click o' the latch and he'll come home—
A stir in the dusk at the little gate.
Hush, my heart, and be still, my heart—
Surely it's sweet to wait!

The tall skies lean for it, listening.
Never a star but lends an ear.
The passionate porch flowers stoop and cling,
Parting their leaves to hear.

Click o' the latch, and him come home—
A step on the flags, a snatch of song.
Hurry, my heart, be swift, my heart.
How did we wait so long!
—Nancy Byrd Turner in Lippincott's.

ALL ABOARD FOR THE FURNITURE ISLANDS

By Clara Peterson

(Continued from last week.)

"No, it isn't the little fawn's father, Janie. See, this deer hasn't any horns. The face is the same, but it isn't the one—and think of it, Sir Arthur has promised to stop shooting—now they'll be married."

Janie dried her eyes. It wasn't the fawn's father after all—and how delightful that Sir Arthur and Alicia could be friends again!

They hadn't time to try to find their way back to the hound, for a page, who smiled shyly at Janie, came to take them to the Queen. Supper was being served in a pavilion on the lake side. The day had grown a little darker and not until they heard the word "supper" did the twins realize how hungry they were. They scampered after the page, who lost all his dignity in laughing with them.

The pavilion was set high above the water and on the blue painted steps Cinderella was waiting for them. She had changed to a gown of grey and pearl and her golden hair was bound with a chain of turquoises.

"Come, Twinnies, I hope we have what you like for supper," she said gayly, but there was a note of sadness in her voice. The twins did not realize that it was because Lady Alicia was sad; they were too hungry to realize anything except that the cunning little table was loaded with all kinds of good things.

There were cinnamon buns with plenty of raisins, and lettuce sandwiches, and a golden salad, and cups of chocolate pudding, and pears and peaches and grapes, to say nothing of a great tray of cakes covered with rainbow frosting.

The Queen had no more than poured her second cup of tea (the twins had lemonade) when there were footsteps on the sand outside the pavilion and Lady Alicia with her knight came up the steps. Cinderella ran to meet them.

"Oh, you darlings! You have made up. Now we can all be happy again."

Sir Arthur shook hands very soberly with the twins, and Lady Alicia, in moss green velvet, kissed their pink cheeks and thanked them. Then a serving maid brought another small round table for the lovers, because there wasn't room at the Queen's, and everybody began to eat.

The tiny white dog had a plate of meaty bones under Janie's chair, and a big St. Bernard with a white collar around his neck—he had come up with Sir Arthur—ate cakes from Jennie's hand.

After everything was cleared away Sir Arthur pulled up the rosewood music box and set it going, and Cinderella and Alicia, after the blue rug was rolled up, danced a polka for the twins.

Then, just as the sun was setting, two tall pages in suits of crimson and gold brought a carved and cushioned palanquin, and the twins seated themselves in it, for Paintetta and Cammie were waiting on Eastchair Island and it was time to go.

While Cinderella and Alicia waved their hands, the little girls were carried down the steps and across the terraces to the foot of the hill, and then up, up along the path they had traveled that afternoon.

The fawn and the bunnies were not to be seen, but below lay the palace, glorious in the sunset, and a hlur of gray and green showed where the

Queen and her lady were watching.

Mr. Bote was waiting for them. The Queen had ordered him and the pages immediately departed. He looked so downhearted that Jennie gave him a whole handful of dots instead of forty.

"Wife's home," said he, slipping into the water with the twins in their seats. "Found the house full of dirty dishes. I told the children to wash 'em—no use. 'Fraid to go home."

The twins didn't know what to say, so they trailed their fingers in the cooling water and looked toward Eastchair. It was a pretty island as green as the rest, but there were no trees, nothing but a low building that looked like a large pat of butter, it was so very yellow.

Mr. Bote was so sad that he did not even say good-by to the twins as they hopped off his back. They heard him muttering:

"I'd better go to Bed Island. Softest to sleep on."

With that he splashed in the water and was gone.

It was very nearly dark and the twins hurried through the grass and huttercups toward the building. It looked most comfortable, for there were a great many round windows, and light was streaming from every one of them. In fact, the Daffy-down-dillies were giving a party, and Paintetta had left word for the children to meet her there.

Janie and Jennie ran around the hack of the building, which would have been quite dark save for the thousands of fireflies flitting about and looking like the sparkles on endless rows of Christmas trees.

The front entrance way was long and narrow and was lighted by a large globe in the corner of the ceiling. The twins stopped at the wide open doors and peeped in.

There was a red carpet on the floor of the hall and a red cushioned waiting hench at one end, and at the double doors which led into the center of the building were ruby velvet curtains drawn closely together.

The hall was empty except for a Dandy Lion in a bright yellow suit. He sat at a little ticket window and when Janie stretched her head a hit too far and fell into the door he looked up with a frown.

"You're early. Names please."

"Janie," said Janie.

"Jennie," said her twin.

They had entered and were standing rather fearfully before the lion.

He had taken the cover off a white box of tickets as he spoke, but when he heard the twins' names he jerked up his head and stared at them. He was a very young lion and he was shaved so carefully that he looked as sleep as Jennie's cat at home, but the twins backed away nevertheless.

"The very idea!" he scolded in a gruff voice. "Those are quite the ugliest names I have ever heard. And you expect to go to the Flower Ball! Prepossoteros!"

This last word didn't sound quite right to the twins but they thought it must be correct or Dandy Lion wouldn't have used it and they didn't feel the least bit like correcting him anyway. He began talking as he worked among the tickets.

"I should think you'd be ashamed to walk around with names like those. You should hear some we'll have tonight. Now, little girl, don't cry. (Janie's eyes were brimming.) I don't know hut what you might sit on the hench over there and watch the guests come in. Don't—"

He stopped suddenly, and from the hench the twins saw the first guest enter. Dandy was searching frantically among the tickets, hut Janie and Jennie did not notice him, for the lady who had stepped so daintily into the hall was an American Beauty.

She had on a scarlet headdress of rose petals and her gown was red and gold. Her necklace was of diamonds and she spoke languidly as she reached out a white hand for her ticket.

"Rosebud Natalie."

Dandy Lion handed her the hit of pasteboard and someone inside drew apart the velvet curtains. Rosebud Natalie walked gracefully between their folds and the sound of fairylike music floated out.

The twins had only time to squeeze each other's hands over the wonder of

The Cultivator Patterns

BE SURE TO SEND SIZE

3402. Girls Dress.—Cut in four sizes: 8, 10, 12 and 14 years. A 10 year size will require 4 yards of 36 inch material. Price 10 cents.

3389. A Simple Dress.—Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size will require 5½ yards of 40 inch material. The width of the skirt at the foot is about 1½ yard. Price 10 cents.

3401. A Dainty Frock.—Cut in four sizes: 6, 8, 10 and 12 years. A 10 year size will require 4½ yards of 27 inch material. Price 10 cents.

3400. An "Easy to Make" Apron.—Cut in four sizes: Small, medium, large and extra large. A medium size will require 2½ yards of 27 inch material. Price 10 cents.

3403. An Attractive Suit.—Cut in three sizes: 12, 14 and 16 years. A 14 year size will require 4½ yards of 44 inch material. Price 10 cents.

3385. A Pretty Dress.—Cut in three sizes: 16, 18 and 20 years. A 20 year size will require 5½ yards of 40 inch material. The width of the skirt at lower edge is 1½ yard. Price 10 cents.

3396. Child's Dress.—Cut in four sizes: 2, 4, 6 and 8 years. A 6 year size will require 3½ yards of 27 inch material. Price 10 cents.

3160. Ladies House Dress.—Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. For a medium size, 6 yards will be required of 36 inch material. The width of the skirt at lower edge is about 2 yards. Price 10 cents.

It when another lady stepped through the doorway, lifting her gleaming train.

"Pansy Perdlta," said a sweet voice as Dandy Lion handed her the ticket.

She was dressed in royal purple with wistaria lace and her hair and eyes were black. She turned her head and smiled at the twins, then the curtains parted again and she was gone.

The fragrance of perfume which had come in with Miss Rosebud was now growing stronger, for the flower ladies were arriving in a crowd. The twins could hear only part of the names and they could not see Dandy Lion at all, for between them was a mass of silken dresses and shining arms. There was now such a gathering that no one could see the twins, and they were whispering excitedly.

"That one is Marigold Aurella," said Jennie softly. "Isn't that lovely orange satin—and there is Snowdrop Madeline, the darling little white thing, and this one in lavender is Hyacinth Annette."

"I liked Primrose Cecilia the very best," whispered Janie. "She had on a lemon colored dress just like my Sunday one, and little cunning green slippers. I wish she hadn't gone in so soon—Columbine Lucille looks too proud I think."

Both of the twins liked Daisy Evangeline in scalloped white satin, for she happened to look down and smile at them, but Bluebell Hortense stepped on their toes without even knowing it and Amaryllis Regina in creamy pink chiffon crowded so that the twins were quite ashamed of her. Lily Dorinda had on an ermine cape which looked ever so hot, but Heliotrope Althea in a short gown of palest purple covered with icy spangles looked cool and sweet enough to eat.

When everybody had drifted past, the charming strains of music growing louder and louder, the twins took their eyes from the ruby curtains and looked at Dandy Lion. He had a bright green handkerchief in one hand and was wiping his head, muttering to himself.

"Head's swimming—rather have name Smith, Lizzie Smith—"

The twins were just wondering whether they ought to go up and speak to him when there was a sound of violins from without and Dandy got down from his stool and ran to the door. He beckoned to the twins to follow him, and all three of them stood and looked out into the night.

Across the lawn toward the building the Daffy-down-dillies were coming. The light from the windows shone upon them and over their heads a myriad fireflies twinkled like live embroidery.

The Daffodils were dancing gayly and each one played a fairy violin. They wore green silk stockings and golden slippers. Their petticoats were of yellow lace and their flowered gowns were cut away like Bo Peep's. Each one had long curls of yellow, and pink cheeks and eyes that sparkled at the twins and Dandy as they came closer.

"They don't need tickets, thank Heaven!" said Dandy as he scrambled out of the way.

The twins ran back to their bench and watched the Daffodils swing through the hall. Then the crimson curtains closed behind them and the little girls sank back rather sorrowfully.

"May I go in?" asked a voice.

A girl was standing in the doorway. She had brown hair braided neatly and tied with a black bow, and she wore a pretty dress of pink striped gingham which looked almost like the twins' pajamas.

Dandy lifted his head and snapped, "Name please?"

"Mary."

"Mary!" shouted the lion. "Can't do it. Sit over there."

He pointed to the bench and the twins moved over to make room for the girl. She smiled and said:

"Why can't we go in? All of my flowers have left the garden and I want to see what they are doing. It is quite absurd to have them act like real people."

Mary wore a necklace of little wrinkled shells, and on her arms were bracelets where silver bells tinkled cily.

"Are you—could you be Mary, Mary Quite Contrary?" asked Jennie, while Janie stared wide eyed.

(Continued next week.)

HOUSEHOLD QUERIES

Pear Syrup Molds

Why is it that when my pear syrup is kept a long time there is a moldy surface which can be taken away without changing the taste or flavor? I have some grape syrup which is kept in same kind of bottles as the pear and does not get moldy.—Subscriber, Petaluma.

Perhaps the pear syrup was not boiled down to the same density of sugar as the grape and so would not keep so well, or was not sealed boiling hot. If one has an hydrometer and boils syrup down to 70 degrees on the Balling scale or 37 per cent on the Baume (tested when syrup is cold) it will keep perfectly even in open containers. Or poured boiling hot into sterilized bottles or jars and sealed at once it will keep if reduced to only 63 degrees sugar. An hydrometer may be purchased from any chemical supply house or ordered through drug store for less than one dollar.

Home Curing of Beef

This year we expect to kill our own beef and would be glad of any advice on home curing, especially how to make "dried beef" and in putting the meat in a brine to freshen and use as fresh meat. We do not care for what is commonly known as "corned beef."—Subscriber, Julian.

For putting down beef in brine allow ten pounds of salt, two ounces of saltpeter to four gallons of water. The saltpeter is added to keep red color of meat. It may be omitted. This is about the quantity required to brine 100 pounds of beef. Bring brine to boil and let cool before using. Thoroughly clean and scald barrel or crock before packing beef in it. Rub pieces of beef with ten pounds of salt to 100 pounds meat and allow to stand overnight to draw out blood. Then pack in container and add brine prepared as above to cover. Keep meat submerged by wooden float until used. Store in cool place. If brine becomes slimy or moldy or of unpleasant odor, pour off and add freshly made brine of same strength. In corning, sugar and baking soda are added to brine.

Smoked Dried Beef. The round is usually employed. Cut lengthwise of muscle fibers so that fibers will be cut crosswise later for table use after drying. To 100 pounds meat weigh five pounds salt, three pounds sugar, two ounces saltpeter. Mix thoroughly. Rub meat with one-third of this mixture and pack tightly in large jar or barrel. Allow to remain three days. Remove and rub with one-third of mixture. Let stand three days. Repeat third time. The brine forming after each salting should not be removed but the meat should be repacked in liquid each time. Now for the smoking. Rinse off adhering salt and hang in smokehouse. Allow to drain several hours. Smoke for about three days, then hang in kitchen or dry attic and allow to dry sufficiently for slicing. The meat should hang in smokehouse about seven feet from ground. Cool smoking is what is required. The fire should be outside the house and brought in to the center of the floor by stovepipe. Directions for making a smokehouse for smoking fish were given in the household department of Cultivator of October 16, 1920. These can be followed by modifying to give added height for beef or pork and to conduct smoke from outside fire.

HINTS FROM HOUSEKEEPERS

Three Weeks Cake

Have been a subscriber to your paper for the past year and as I have been helped by your recipes, thought some of your readers would like to benefit by a good cake recipe that does not call for any eggs.

Three Weeks Cake. Three cups water, 2 cups sugar, 3 teaspoons cinnamon, 1 pound seedless raisins, 1 teaspoon salt, 4 tablespoons lard. Boil 15 minutes and let cool. Then add 2 teaspoons baking soda dissolved in 4 tablespoons lukewarm water. Add 3 cups flour and mix stiff. Bake in slow oven. This is like fruit cake and will keep indefinitely.

A good frosting for this cake: Powdered sugar, 1 teaspoon butter. Mix with cream and beat well. Flavor with vanilla.

Hoping this will help others as I have been helped, Mrs. C. E. Dilley, Elsinore.

When Writing Advertisers Mention California Cultivator

Where there is Secrecy and Evasion there is Something to Hide

SMALL wonder that the tire-buyer's mind has been disturbed in the past few months. Suppose a man came up to you and offered to sell you a tire.

You would want to know something about it before you bought—where it came from—who made it—what it might be expected to do—and what the man who is selling it to you expects to get out of it.

* * *

Now reverse the situation. Go into a tire store.

You will never learn anything about the tires you

find there from the *prices*.

The size of the discount will never tell you anything about the *actual value* of the tires.

There is *only one* way of telling anything about the tires you find in a tire store—by their *reputation*—the standing and responsibility of the company behind them.

If a dealer has the *right kind* of tires in his store they will be known. They will have a reputable name on them. The buyer will be given *facts* about the tires.

* * *

The facts about United States Tires are easily obtainable.

Thousands of dealers all over the country stand ready to give them to you.

Dealers who are more interested in securing the *confidence and good will* of the motoring public than they are in merely selling a number of tires.

The United States Rubber Company stands behind these dealers with all the strength and influence at its command.

Backing their responsibility with its own. *Staking all of its great and wide and varied resources on the quality of its tires and of its dealers.*

* * *

United States Tires are *always worth what you pay for them*.

And the dealer who sells them to you is worth just that much more as a straightforward tire merchant.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

EDITORIALETTES

Note the picture of abundance on the cover; also note the Thanksgiving suggestion in the four lines at the bottom. While we cannot help but think for a moment of the pangs of hunger which are endured by many on the other side of the world, there is certainly abundant suggestion for this Thanksgiving season in America. Our crop of corn was never so great; our crop of practically all foodstuffs is in excess of normal. The surplus is being sent as rapidly as possible to all parts of the world; our surplus, now ready for export, is said to represent a value of over two billions of dollars.

We hope our readers will understand that the wonderful display of corn on the cover is intended simply as an exhibit of abundance rather than of perfection of type. Back in the corn states they would perhaps pick flaws with these individual ears of corn. California has also produced vastly higher quality, but none showing more perfectly nature's abundant gifts.

The meeting of the county horticultural commissioners of the state at Fresno last week had little of interest for the general public, in fact, many of the sessions were executive, but we doubt not the increased efficiency made possible by more united effort

will result in greater service to producer and shipper. California's quarantine service and county orchard inspection has saved the state millions.

* * *

Not content with past accomplishments, the commissioners are planning bigger. Bugs they have fought; chasing of big red apples to the bottom of the pack has been accomplished, and weeds hoed. But the weed campaign is now to be not only "efficient but sufficient." A committee consisting of F. W. Waite of Imperial County, H. M. Kingwill of Glenn, Harry Stabler of Sutter, J. B. Hickman of Monterey and W. D. Butler of Napa are to make up the new weed pest committee. The tumbleweed will now be chased across the valley faster than ever.

* * *

Speaking of the magnitude of the California fruit industry and comparing it with its beginnings when small express fruit shipments across the continent were considered most remarkable, Mr. Bentley called attention to the fact that one day's offerings and sales of California fresh deciduous fruit in the one market of New York aggregated 185 carloads. California is indeed the greatest fruit producing state of the country, but when today's deciduous fresh fruit freight rate on \$1.15 is raised to \$1.92 the industry will be so handicapped that there can hardly help but be a material reduction in our marketing possibilities. Besides the increase in the freight rates there will also be a reduction in diversion privileges, which means a greatly restricted market. Transportation people and the interstate commerce commission appear to be endeavoring to determine how much the California fruit industry can bear.

BIG CITRUS CROP

As California begins shipping its citrus crop for 1920-21 there is much of interest as to quality and quantity. So far the quality appears to be above normal, but it is yet too early to speak with certainty in the matter, for a streak of extreme cold is sometimes given which materially lowers its quality. As to quantity, the Pacific Coast Packer estimates of oranges, lemons and grapefruit a total shipment for the year which will end November 1, 1921, of 57,675 cars, of which 23,320 will be Navels, 20,710 Valencias, 2,165 miscellaneous, 508 grapefruit and 10,400 lemons. If this estimate is reached it will be some 12,000 more cars than were shipped out last year and the biggest crop yet shipped from California.

The quality of Florida fruit is reported as high, "possibly the best ever placed on the market, according to present indications." It seems that it is impossible to make accurate estimate of the Florida output because of lack of data as to number of new orchards coming into bearing. Based on percentages of production, compared with last year, the total output of citrus may exceed 13,500,000 boxes. Last year's output was 12,495,925 boxes. The grapefruit output will be about 75 per cent that of last year and the orange crop 115 to 120 per cent. The government crop report divides the production as follows: Oranges, 8,500,000 boxes; grapefruit, 5,000,000 boxes. Florida is not a lemon producer.

Other states producing oranges, almost entirely of Satsuma variety, are Alabama and Louisiana. There is no means of knowing what the output of those states is, but the guess is that the output of Alabama will be between 50 and 100 cars. Louisiana is a producer of a quantity of the sour, or bitter, Seville orange used in the

making of marmalade. The state will not produce, all told, over 50,000 boxes, of which nearly three-fourths will be Creole Sweets, the balance divided among Mandarins, Tangerines, Navels and a very small sprinkling of grapefruit. The southern part of Louisiana is the oldest citrus producing section of the United States.

COOPERATION IN THE LARGE

While California has set the pace for successful cooperation, there is still to be found an occasional association which is not securing fullest measure of success. So far as we have observed, this lack of success has not been because of lack of business management or of keenest of observation as to market conditions in the great market centers. Take, for instance, the present situation as to beans and rice. The keenest management in the world cannot go up against a flood of imported stuff from Asia and get by and secure a living return to the American grower. The lack of a protective tariff, the unfair rates of exchange, the fact that many American ships used to transport food to other countries make attractive rates on these particular products back to this country, all combine to lower the price below possible competition.

While these difficulties might not all be overcome by a more complete cooperation, excepting that that cooperation could secure federal cooperation, yet there might be something of relief in accepting a suggestion made in the recent fruit growers convention at Fresno. This suggestion had to do with a more thorough cooperation by

cooperators. California today has, say, a score of great cooperative organizations maintaining each its full selling force, and some of these great organizations are transacting a business ranging from 50 to 100 millions of dollars each annually. Why cannot economy be served by uniting these great selling organizations? No question was asked on the floor of the convention which attracted such instant attention and which appealed so strongly.

The grower of rice, of raisins, of prunes, of peaches, of beans, citrus fruits, potatoes, fresh vegetables or other products would then turn over to the one strong organization his product, and the selling organization, with its distributing stations in all centers, would be able, possibly, to deal with the consumer, but more probably with large retailers, eliminating much of the intermediate and expensive marketing machinery. The spread between producer's price and consumer's is uneconomic, worse, it is almost criminal. The rice grower is today unable to sell at three cents per pound; the housewife is often compelled to pay 20 or 25 cents per pound. It's immaterial who gets that several hundred per cent on producer's price, but the production of the crop will cease under such conditions.

This great distributing organization will not come without long planning, without even a long educational campaign, but the Cultivator feels safe in predicting that the day will come when such great organization, capitalized at \$100,000,000, or at least sufficiently, will take our crops and put them in consumers' hands and still leave the producer living wage.

One Dollar Yearly

Great Convention Week at Fresno

By C. B. Messenger

THE shade of Russ Stephens certainly stalked in convention halls in Fresno last week. Attendants at the state fruit growers conventions a decade or even a score of years ago will recall voluminous reports, together with scathing denunciation of freight rates which fruit growers of California were compelled to pay, and these reports contained a great fund of information as to cost of production, together with the return to the grower compared with return to railway people for transporting the fruit to the market. Mr. Stephens has passed and during the last five years but little reference has been made to transportation rates, but at the Fresno convention several talks were made, with reference to the unfairness in present arrangements, many of the expressions recalling vividly remarks often made in Mr. Stephens' annual reports.

The transportation question seemed to set the pace, for it proved to be a scrappy sort of convention in other particulars. Besides the fight on transportation, which was made by Charles Virden of Sacramento but supported by many other old time convention attendants, including Frank B. McKeivitt, also of Sacramento, the horticultural commissioners had their difficulties as to quarantine regulations in different parts of the state. The potato growers reached no definite decision but had a warm discussion on standardization of potatoes. Some wished the United States standard adopted; others felt that this would be an injustice to some sections of the state, especially the delta of the Sacramento and the San Joaquin. The nurserymen, likewise, had opportunity for fireworks in discussion of bud selection, and, in fact, all the discussion resulting from difference of opinion brought out a settlement satisfactory to all, that is, if we may except transportation, for that is one problem which will never be settled to the entire satisfaction of all.

Other associations holding conventions at the same time were the ladies auxiliary of the nurserymen's association, the dehydration convention, the county exhibit management association, and then besides some two or three other organizations similar to that of the county and city association of purchasing agents.

The State Fruit Growers

The 53d State Fruit Growers and Farmers Convention was first called to order by President Glass of the Fresno chamber of commerce. He, with Mayor Toomey, extended welcome, which was responded to by Director Hecke with acceptance of the hospitalities of the city of Fresno and concluding with his annual address and statement of the accomplishments and expression of the hopes of the department as to California agriculture.

Touching upon the cooperative spirit Mr. Hecke said:

The Great Solvent—Cooperation

"The salient feature of the year's

work, and one that has been amply demonstrated, is that of the vast possibilities accruing from properly directed and well placed cooperation. I will venture to say that there is no problem confronting the agriculturist of today that, under properly administered and well directed effort will not be solved through the efficacious intervention of 'real cooperation.'

"Through the fruit growers and

tomology and our pest control service promises valuable returns under better organized future conditions.

"The outlook for the success of cooperative measures between the California department of agriculture and the federal bureau of crop estimates, markets, entomology, etc., is reassuring and will yield returns to California agriculture not at all possible under more restricted state operations."

Two of the Meeting Places

Upper picture shows Fresno city auditorium, a magnificent structure capable of holding thousands and the meeting place for the State Fruit Growers Convention. Lower, the chamber of commerce where county horticultural commissioners and certified seed potato growers convened.

farmers conventions the California department of agriculture has had the opportunity of cooperating with the agricultural interests of the state in bringing before the people those problems which most vitally affect the farmers and fruit growers. In order to render the work of the department more effective and to enable us to bring to bear upon the problems facing our California growers the added strength of the United States department of agriculture it has been our policy to enter into cooperative agreements with the various bureaus of the federal department. This enables us to improve the salaries of some of our leaders to a limited extent through the payment of collaborators salaries, thus holding them for directing these important lines of work. Cooperative work, in force for some time between the federal horticultural board and the quarantine service of the state department of agriculture, has rendered our quarantine service more effective, and that between the federal bureau of en-

The first day's sessions were given entirely to "Our Present and Future Problems." These were discussed by representatives of practically every large cooperative association in the state of California. The associations were:

California Associated Raisin Company, F. A. Seymour, assistant to the president.

California Peach and Fig Growers Association, F. H. Wilson, president.

California Fruit Growers Exchange, W. E. Sprott, Porterville.

California Walnut Growers Association, Carlyle Thorpe, manager.

California Almond Growers Exchange, George W. Pierce, president.

California Pear Growers Association, Frank T. Swett, president and general manager.

California Prune and Apricot Growers Association, H. C. Dunlap, secretary-treasurer.

California Fruit Exchange, George Cutter, president.

California Fruit Distributors, Wilmer Sleg, sales manager.

In addition, J. M. Henderson of the Associated Milk Producers of California spoke of the work of his association and of its effort to save the industry which is founded on an economic necessity. He said: "National development depends upon the cow. Her product is one which depends upon all the people. I have abiding faith that people will not expect production without reasonable profit plus cost of production." He referred to the efforts of the department of justice and to the decision rendered by Judge Shields and expressed the hope that it would not only save the dairy industry in California but induce the growers to take new heart and produce more milk. He asserted there is not today produced in the United States sufficient milk to apportion a glass a day to each inhabitant.

The rice growers had no direct representative of their association present. Rice growers are not able today to get more than half the cost of production for their product, but grocers are charging to consumers 20 or 25 cents per pound.

Cooperation of Cooperators

But the biggest thought of the day's discussion on cooperation was cooperation of cooperators, one great, strongly financed corporation owned and managed by state or possibly Coast cooperative organizations, this organization to be abundantly capitalized to own and operate warehouses and distribution stations in every large distributing center of the country. In distributing California products alone this corporation would have such lines as canned fruits, canned vegetables, and canned products of all kinds, beans, potatoes, rice, dried fruits and nuts of a wide range, celery, lettuce, cabbage, in fact, all winter grown vegetables, citrus fruits, deciduous fruits from earliest cherries to latest peaches, even pomegranates.

This suggestion met with instant approval on the part of nearly a score of those who discussed the question. More than that, it called for lobby discussion between sessions. Many felt that it might lead to relief from the wide spread between producers and consumers prices. The price received by producer seems in many cases to have no bearing on the price paid by the consumer, for instance, three cent rice selling for 20 or more cents, and seven or eight cent beans near the 25 cent mark.

Standardization

In every one of the associations holding conventions during the week one question up for discussion was standardization. With nurserymen it took the form of bud selection, while with potato, apple or other growers the whole matter of capitalizing honesty of pack was thoroughly discussed. The discussion was usually led by F. W. Read, specialist in standardization of the state department. The first step to be taken appeared to be edu-

(Continued on Page 670.)

Agricultural News Notes of the Pacific Coast

Northern California

Hay and grain crops in Modoc County have been particularly good this year.

Petaluma shipped out nearly 2,000,000 dozen eggs from January 1 to October 1 last.

Hinsdale, Sutter County, is planning to make large plantings of sweet potatoes next season.

The market on potatoes and onions is discouraging, large quantities being stacked up on wharves.

Beekeepers of Butte County met last week at Chico to discuss development of the industry in that county.

The rains of the last week of October practically brought to an end grape shipping season in Sonoma County.

Many land holding corporations of Japanese were reported formed at the eleventh hour just before the election.

At the tractor course just finished at Lodi, San Joaquin County, 11 makes of tractors were used in demonstrations.

A good crop of celery in New York this year is expected to help in lowering prices on Sacramento Valley grown celery.

Rice growers of Colusa County report benefit from the north winds, which have hastened drying of the rice fields.

Teachers of agriculture in the high schools of Northern California met at Lodi last week to consider educational problems.

The Poultry Producers of Central California will build a packing house at Petaluma as one step in marketing the produce of its members.

Olive growers and packers met a few days ago at Chico to protest the recent ruling of the state board of health that no olives can be sold in bulk.

The State Grange met in annual session in Sacramento the last week in October with an attendance of over 400. Action was taken to establish headquarters at Sacramento during the coming session of the legislature.

Grape growers of the San Joaquin and the Sacramento Valleys met at Modesto to consider method of combating the grape mealybug. R. L. Nougaret of the viticultural service was present at the meeting.

The Glenn County farm bureau held its annual election last week. Dr. W. H. Walker of Willows was elected president; O. L. Rater of Glenn, vice-president; directors, A. E. Linstrom and F. A. Clark of Orland, W. A. Koehler of Glenn and W. W. Foster of Butte City.

The state department of agriculture is cooperating with the federal bureau of crop estimates in a crop reporting service in California. R. H. Taylor and Dr. J. P. Iversen of the state department have received appointment from the federal authorities as collaborators.

The state university announces that the appointment of Dean Hunt as permanent delegate to the International Institute at Rome will in no way affect his connection with the college of agriculture. It is stated that he will return June 1 and resume his work with the college.

Central California

Orange picking has begun at Sanger, Fresno County.

It has been proposed to raise the required sugar content in wine grapes from 17 to 20 per cent.

Fifteen carloads of hogs sold at Hanford at the second annual Pork Day auction held October 28.

Shippers of grapes from Sanger, Fresno County, have experienced much difficulty in securing cars.

Miller & Lux are bringing in their big herds of feeders from Nevada for winter feeding on their California ranches.

The California Associated Raisin Company has announced a raise of half a cent in prices for the remainder of the crop.

Grape shipments from the Livingston district of Merced County are estimated by Inspector Chinn at over \$1,000,000 value.

The Farmers Union of Stanislaus County has asked the board of supervisors to establish a community rest room in Modesto.

The Lucerne packing house near Hanford, Kings County, has closed for the season after sending out 139 carloads of grapes.

Death of several cattle from eating poison hemlock has been reported by Horticultural Commissioner Hickman of Monterey County.

Manager Morris of the Merced-Stanislaus Sweet Potato Association announces distribution of \$60,000 from sale of the fifth pool.

Oranges are beginning to color up in the Springville district of Tulare County. A number of growers expect to start picking soon.

Farm bureau fat hog auction sales will be held in Kern County at Bakersfield, November 20; Wasco, December 4; McFarland, 11; Bakersfield, 18.

A series of lectures on poultry culture are being given in Stanislaus County under the auspices of the Stanislaus County Poultry Association.

Dairy Inspector Peairs of Tulare County, will demonstrate each Saturday to dairymen of the county methods of sterilizing milk in compliance with the state law.

President Giffen of the Associated Raisin Growers spoke on cooperation to the attendants at the annual picnic of the Stanislaus and Merced County farm bureaus on October 30.

The Milk Producers Association of Central California will hold another meeting November 20 to try to settle the policy of the association in regard to marketing with the California Milk Producers.

E. C. DeGaris of the Australian Dried Fruit Association at Melbourne has been inspecting the plant of the California Associated Raisin Company. Mr. DeGaris says that many of the returned soldiers have taken up grape growing.

Growers of Pima cotton in the Lindsay district of Tulare County have incorporated as the Lindsay Cotton Growers Association. About half of the members have signed up for membership in the Arizona-American Egyptian Cotton Growers Association.

Southern California

The San Dimas Lemon Association held its annual meeting November 6.

Eight boys and three girls of Tustin have enrolled in a 120 day pig feeding contest.

Redlands, San Bernardino County, held its November flower and horticultural show last week.

The recently organized Santa Barbara County farm bureau makes the thirty-seventh in the state.

Growers of milo in the Imperial Valley are seriously considering the formation of a marketing association.

Large plantings of grapes will be made the coming year in the Palo Verde Valley of Riverside County.

The U. S. geological survey has published a report on the ground waters of Antelope Valley, Los Angeles County.

The Garden Grove drainage project was defeated. It was felt that the distribution of assessments was not equitable.

The home demonstration agent of Riverside County will give demonstration of pressure cookers at the December meetings.

The second annual institute of the Orange County farm bureau held at Anaheim last week was attended by hundreds of ranchers.

The California Lima Bean Growers Association has raised the standard for 1920 Limas. Seaside Limas must now be 99 per cent perfect.

Apple picking is practically over in Yucaipa Valley of San Bernardino County. Growers report keen demand and very satisfactory prices.

A large number of potato growers of Orange County attended the potato growers field day at Van Nuys, Los Angeles County, last Saturday.

Directors of the Los Angeles, Ventura and Santa Barbara Counties farm bureaus were guests of the Ventura County farm bureau at a big barbecue at Foster Park, November 6.

At the Citrus Institute recently held in Orange County resolutions were adopted asking the citrus experiment station to conduct certain of its experiments in Orange County.

Cotton gins of the Palo Verde Valley of Riverside County are running to capacity. Most of the growers are selling sufficient cotton to clear their crop loans, holding the major part for better market.

The management of the Riverside County fair association is endeavoring to secure support of the farm bureaus of the seven counties of Southern California to make the fair at Riverside a Southern California farm bureau fair.

The Imperial Valley Honey Producers Cooperative Exchange held its annual meeting at El Centro November 9. Owners of 10,000 colonies along the Colorado River who applied for membership were advised to form a separate exchange as more economical in transacting business.

The importation of cheap olive oil has knocked the bottom out of the market for oil made from apricot pits, according to the local packing plants. During the years of the war the apricot oil was used by fish canneries and apricot paste by bakers in the making of "almond meal" maccaroons.

The Coast and General

Arizona is sending out shipments of early oranges.

The Colorado potato market is showing some improvement.

A cattle loan bank is to be established at Jacksonville, Florida.

Colorado potato growers report holding their crop for better prices.

Light showers in Eastern Washington have improved the pastures.

Range stock in Nevada has mostly been moved to lower feeding ground.

October 30 to November 6 was observed in Washington as Apple Week.

The Northwest livestock show was held at Lewiston, Idaho, November 7-12.

The Oregon Bankers Association is taking steps to extend proper credit to stockmen.

Walla Walla County, Washington, expects to ship out 50 carloads of potatoes this fall.

The Hood River apple crop of Oregon amounted to about a million and a quarter boxes.

Montana reports stock feed plentiful on the lower ranges except in the eastern part of the state.

Florida growers and shippers met at Orlando, November 10, to discuss methods of abolishing the bulge pack.

The cranberry crop on the Washington side of the Columbia River has been seriously damaged by heavy rain fall.

The farm bureau of Whatcom County, Washington, is buying stumping powder and other supplies needed in clearing logged off lands.

The first killing frost in the cotton belt east of the Mississippi came October 29 and 30. Rain in the same section delayed cotton picking.

The Walla Walla, Washington, Shorthorn Calf Club recently sold at auction 34 heifers. The sale was held at the fair grounds at Walla Walla.

A most successful fair was held at Port Townsend, Washington, this fall. Exhibits of vegetables, fruits and grain were said to be unusually fine.

One to ten inches of snow has fallen in ranges of Yavapai, Coconino and Navajo Counties of Arizona and heavy rains in other grazing sections of the state.

Heavy rains and cold weather in Colorado have interfered with late harvesting operations in potato and sugar beet fields and the shipping of livestock.

Two thousand family memberships at \$10 a year is the goal set by the Spokane County, Washington, farm bureau to be reached by the end of this month.

The annual meeting of the Yakima Valley Dairymen's Association will be held December 9. A series of organization meetings is now being held through the valley.

The Oregon Cooperative Growers Association is sending out checks to pear growers based on an apportionment of \$70 a ton on No. 1 pears and \$30 a ton on No. 2's.

Shanghai, China, is one of the leading egg freezing centers. There are others at Nanking, Hankow and Tientsin. In 1919 these exported 4,000,000 pounds of desiccated eggs.

Farm Bureau Will Market Products

THE farmers of California announce through their authorized grain growing and marketing committees the completion of one of the most perfectly organized campaigns ever started in the agricultural districts of the state. They have taken over the new 2,000,000 bushel terminal elevator at Oakland tidewater. Their organization for establishing country elevators and warehouses is completed. Fifty thousand farmers are enlisted into county and state marketing exchanges. Will export and market products directly to the consumer. Economic conditions controlling the distribution of farm products have long been problems of deep concern to the farmers, and the project as herein announced indicates that from the weakness of exploitations of the past there has crystalized into activity a program which in its very nature must react for betterment to both the producer and consumer of food.

The program started upon bids fair to make agricultural history in California. It will primarily revolutionize the grain operating industry of the state and relegate the sack handling of grain and other products, with the laborious and expensive processes in-

involved, into past history, as already experienced over the entire grain growing districts of the United States outside of California.

The project just launched will standardize and make of common knowledge to the farmer the grades of grain and other products grown. It will permit the farmer to deal directly with the refiner and consumer of his products. It will make possible the elimination of speculation in farm products and make possible a reduction in the costs to the user and consumer.

The perfection of the terminal plans will give outlet for export and interstate shipment of prepared grains. The perfection of lines of country elevators over the state will save an annual sack bill to the farmer of California of over \$5,000,000 and will reduce the annual labor cost of the grain harvest of the state fully \$5,000,000 more.

In perfecting the cooperative county marketing exchanges over the state the sale of grain and other farm products will go forward at minimum expense and reach its final distribution

By W. H. Heileman

through a state marketing exchange created by a federation of the county units. In all the operations, middlemen costs will be reduced to the minimum and the control of the product will remain largely in the hands of the producer until turned over to the actual user. At present 17 counties have either perfected or are completing their marketing programs.

Under the present methods of supplying the world with agricultural products, the wool grown by the farmer brings less to him than the cost of production, though the price of clothing remains too high. The cotton grower this moment is facing bankruptcy, while cotton goods continue to go at almost war prices. The grain growers of the United States under present marketing manipulations stand to lose over \$2,000,000,000 on this year's crop, though the price of bread remains high and we have almost forgotten the five cent loaf. Mutton and beef production to the stock raiser is an unprofitable industry almost uniformly, though meat to the consumer has not been reduced.

The campaign just launched for the handling of farm products cooperatively is the latest development in the farming industry. Over the entire United States under the new and unified movement led by the American Farm Bureau Federation, farmers are organizing their grain, livestock and other industries on a cooperative basis. The basic strength in the program is the cooperative spirit which pervades and which has been developed through the farm bureau movement everywhere. The farmers of the state are together in this economic betterment and the consumers will early learn that the fundamental principles involved will merit their unanimous cooperation.

It is fully appreciated that carrying through the plans as developed will meet with organized opposition in some of our trade centers. The same conditions arise, however, in every movement for economic betterment. California farmers are convinced regarding the soundness of their position in undertaking to perfect their products for distribution and in organizing to place themselves nearer to those who are dependent upon the products of the soil.

Crop Report for California

By E. E. Kaufman

HIS crop report is compiled by the agricultural statisticians of the federal bureau of crop estimates and the California department of agriculture.

Conditions during October were generally favorable for continuing the harvest of California's various crops. Light rains occurred in all parts of the state, with a heavy fall of snow in the mountains. The snow melted rapidly, filling the reservoirs and greatly relieving the power shortage. Temperatures were about normal with warm sunny days and rather cool nights, with light touches of frost nipping the foliage of beans, cotton, corn and grain sorghums, with slight damage in some instances, but more generally helpful in checking further growth and bringing about more rapid maturing.

Corn

Corn matured rapidly during the month and harvesting is now going on, with yields about as expected. The average yield for the state is estimated at 36 bushels to the acre, compared to 33 last year and a ten year average of 34. The delta of the San Joaquin is the principal producing section, with a reported yield of about 50 bushels to the acre. Total production for the state will be about 3,240,000 bushels, compared to 2,871,000 bushels last year and 2,975,000 bushels in 1918.

In the United States the production is estimated at 3,199,126,000 bushels, as compared with 2,917,450,000 bushels last year and a five years average (1914-1918) of 2,760,484,000 bushels.

Potatoes

There was not only an increased acreage of potatoes this year, but an increased average yield as well, making the total crop about 13,289,000 bushels. Last year the production was estimated at 11,352,000 bushels and in 1918, 12,870,000 bushels. Both early and late potatoes are figured in the

acreage and production estimates.

In the United States the potato crop shows an increased average yield over last year which, on the increased acreage planted, brings the total production up to about 421,252,000 bushels, compared to 357,901,000 bushels last year.

Sweet Potatoes

The average yield of sweet potatoes this year is about 136 bushels, or just under four tons to the acre, which, on the estimate of 8,000 acres planted, gives a total production of 1,088,000 bushels, equivalent to 29,920 tons.

Sugar Beets

Sugar beets showed a condition on November 1 of 88 per cent of a normal, compared with 87 last month, 68 one year ago, and a ten year average of 89. The better condition and increased acreage promise a very material increase in the tonnage of sugar produced this year.

Sugar beet production in the United States is forecasted at 8,812,000 tons, as compared with 6,421,000 tons last year and a five year average (1914-1918) of 6,051,000 tons.

Grain Sorghums

The acreage planted to milo, Egyptian corn, etc., decreased in cotton growing sections, but increased slightly in some bean growing localities. Reports indicate that not quite the usual acreage was harvested. The average yield is estimated to be about 1,500 pounds per acre.

Rice

Some slight damage resulted from heavy winds blowing down and shelling the grain more or less.

Beans

The yield of beans other than Limas varies from two or three sacks to the acre in some sections to over 15 sacks in others, with an average

for the state estimated at about 680 pounds, or 11.3 bushels. Blackeyes are not up to expectations in the Modesto-Turlock district, and some pinks suffered from frost around Stockton. The production of small whites, large whites and pinks will be the smallest for a number of years.

Apples

Apple production was estimated on November 1 to be 69 per cent of a normal, compared to 100 last year and a ten year average of 77. Quality is below the average, and the rigid inspection this year is cutting down the percentage of the commercial (boxed) crop. Total production will be about 6,000,000 bushels.

Apple production for the United States is estimated at 236,187,000 bushels, as compared with 147,457,000 bushels last year and a five year average (1914-1918) of 202,698,000 bushels. The commercial crop this year is placed at 35,417,000 bushels, or about 106,251,000 bushels.

Pears

The production of pears is about 85 per cent of a normal, indicating a crop of 90,000 tons. Shipments are greater than last year, tonnage canned 80 per cent of last year, and tonnage dried, probably 50 per cent of last year.

Almonds

The production of almonds is now estimated at 65 per cent of a normal, or about 75 per cent of last year's record crop.

Walnuts

Reports on the total production of walnuts indicated disappointing yields when harvesting began, and the crop is now estimated to be about 22,500 tons, against a total last year of 23,100 tons.

Raisins

The indicated average yield was

about 1,900 pounds to the acre, which, on an estimated acreage of 190,000 harvested, would show a total production of about 180,000 tons.

Oranges

Many reports indicate that oranges are not sizing up quite as much as expected, although the condition is the same as last month, 82 per cent of a normal. Cool nights and sunshiny days developed color rapidly, and shipments from Northern and Central California have already been made. There is nothing in the present condition of the orange crop to warrant a change in the forecast of one month ago, when the total production was placed at 18,500,000 boxes for the state.

On December 11 preliminary estimate of cotton production by states and for the United States will be issued at Washington, D. C. On December 14 will be issued the final estimates of the acreage, average yield per acre and production of the various field and fruit crops. On December 17 the estimated acreage planted to winter wheat and rye for the 1921 crop will be issued.

The December report issued by this office will show the estimated acreage, average yield per acre, production and value to the grower of the principal crops grown in California in 1920, with revised figures for 1919. This will not be available until about the first of the year 1921.

WHO HAS THE LARGEST CHERRY TREE?

W. J. McGrath of Watsonville is anxious to learn as to the largest cherry tree in California. He refers to one Pajaro Valley tree which is certainly a sizable tree and one which would test the powers of a little hatchet Mr. McGrath writes:

"Some time ago I saw an article in your paper giving the circumference of what was supposed to be the largest cherry tree in California. If I remember right, it was seven feet and nine inches. We have a tree on our ranch that is about 35 years old which measures eight feet and six inches around."

Top-Dressing Talk, No. 1 *Which Source of Ammonia is Best?*

Think what it means to have a top-dressing ammoniate that is ready for use without pounding of hard lumps — one that is fine and dry and which can be applied easily and uniformly by hand or machine.

Then think of having a fertilizer that contains one-third more nitrogen (one-third more active plant food) than any other nitrogenous top-dressing— $25\frac{1}{4}$ units of ammonia guaranteed.

Also think of a fertilizer that will improve (not destroy) the physical condition of the soil, and that will tend to overcome the bad effects of alkali.

To all these advantages, add low price per pound of actual plant food and you have in mind "The Great American Ammoniate" Arcadian Sulphate of Ammonia.

The efficient top-dressing for orchards, vegetables, and general farm crops. It is quick, enduring and satisfying.

ARCADIAN
Sulphate of Ammonia

California Nurserymen

By Ernest Branton

THE tenth annual convention of the California Association of Nurserymen held at Fresno, November 11-13, was in many respects the most satisfactory, because most progressive, of any yet held. The provision of a financial budget on a five years agreement insures the "sinews of war" sufficient to meet every need during the stated term, and this alone goes far toward insuring success, for sufficient funds is the basic need of every organization. The further provision for meetings of the executive committee not less than once a quarter insures functioning throughout the year, in marked contrast to the past manifestation of life, evident only through three days of annual conventions.

After the froth and fervency of welcome and response had blown off, President Bergholdt delivered the official annual address, in which he stated: "The nurserymen are the connecting link in the chain of human activity that, on the one hand, ties a vast volume of human fruit food and an industry great and munificent to nature's storehouse, and, on the other, unfolds to humanity nature's beauties in plant life. While one is rated the greater material asset, the other is greater spiritually. Both are indispensable to human needs." He showed by catalogue figures quoted that California nurserymen are furnishing trees to the planter more than 50 per cent below prices obtaining in any other section of the United States. He urged closer cooperation, stating that the fruit tree men had dominated late conventions and the next president should be an "ornamental." The executive committee should be authorized and instructed: To renovate the organization; to devise plans and methods to enlarge its activities and make it the leading factor in the horticulture of the state; to draft a code of ethics to be rigidly observed and enforced. Also, that said committee should meet every quarter and secure a budget adequate to the needs of the organization. Continuous and systematic efforts should be made to increase the membership.

Standing Committee Reports

The committee on membership, R. M. Teague, chairman, reported on the past year's campaign and its success but that 25 per cent of 1919 accessions had dropped out, and recommended appointment of special district membership committees. The committee on finance, represented by J. S. Armstrong, chairman, reported funds on hand as more than brought forward from last year's report, but advised collecting sufficient to enable the proper officials to represent the association before legislatures, etc., in matters pertaining to impending legislation, transportation, quarantine regulations, etc. One of the most complete reports was made by J. D. Meriwether on transportation, so potent with facts and figures that it should be digested in full to appreciate its unquestioned importance and value.

M. R. Jackson, reporting on deciduous fruits, said that demand for trees was so great that nurserymen had already sold 75 per cent of their stock for next spring's planting and that the total number of cars of fruits and grapes sent out during 1920 exceeded that of 1919 by more than 8,000. The citrus and tropical fruits committee, R. M. Teague, chairman, reported active demand for Navel and Valencia trees, light for lemons, growing demand for pomelos, mandarins and tangelos, the latter a hybrid of tangerine-pomelo parentage. The demand for avocado stock of good varieties is beyond all expectation or anticipation. The feijoa, or Paraguay, guava, also promises to become a leading commercial fruit. "Native Vegetation," reported by Theodore Payne, recommending methods and varieties, merits full reproduction in a future issue. Roy F. Wilcox, chairman committee on plants and flowers, advised extensive trade exhibits at all future conventions, also a "credit committee" to establish definite credit principles among the trade, and that the next

convention be held at Los Angeles in 1921.

The Program

Many papers and talks before the convention are of such value that we hope to present them in whole or part in future issues of the Cultivator and therefore they will be but lightly touched upon here. Stenographic reports of extemporaneous or studied speeches have not yet been typewritten and therefore are not available.

A. L. Wisker of Grass Valley read a most exhaustive treatise on the subject, "Blight Resistant Pear Stocks," accompanied by tree exhibits so illustrative that it is a matter of regret that all pear stock propagators and growers could not both see and hear. In dealing with "Some Fruits That Pay and Some That Do Not," J. W. Barnicott of Newcastle gave such extensive list found to do well in various sections of the state that its value to growers at large can only be reached by publishing later in full. "Today's Problems in Citrus Culture" is another comprehensive survey of the whole field, a result of wide observation and deep study from which it is quite impossible to merely quote paragraphs in a skeleton outline of the program. The "piece de resistance" of the whole convention was Professor Wickson's paper on "California Nurserymen of the Fifth and Sixth Decade," a continuation of previous papers on the same general subject. It aroused more interest, applause and laughter than any other number on the program and the association will print it and previous numbers of the series in booklet form.

In the paper on "Growing Ornamentals Formerly Imported," read by Roy F. Wilcox, appear 32 pungent points for the consideration of growers of ornamentals, who are urged therein to experiment with the growing of stock now denied importation from Europe and Japan under quarantine regulation number 37. These consist largely of palms, heaths and similar shrubs, roses and rose stocks and many sorts of bulbs. Ernest Branton, under head of "California New Plant Introductions," merely gave lists of such, sent in by dealers, as they will appear in 1921 catalogues. The Silva-Bergholdt Nursery Company, Newcastle list the Standard plumcot; Anita plum, a seedling of Tragedy; Becky Smith, a plum of Japanese type; the Florence, largest of European plums; Wilma, also of European type; a new type of Tartarian cherry and a new black variety from England known as Bedford. The California Nursery Company of Niles have a new prune of exceptional promise known as the XX. The Armstrong Nurseries, Ontario, list the Ontario Cling peach, claimed to be distinct from Tuscan Cling and better adapted to use in the south. In citrus novelties the same firm lists Algerian Satsuma orange, Lue Gim orange, Rialto Seedless lemon, Rangpur lime, Thornless lime, Cedrola (Etrog) citron, Sampson tangelo, Deliciosa cherimoya and Choceana feijoa. The R. M. Teague Nurseries, San Dimas, report the Temple orange of Florida being under surveillance of the federal authorities, with prospects of a release to them during 1921. The Coolidge Rare Plant Gardens, Pasadena, list many novelties, among them a new very dwarf lemon of great bearing capacity, and Eugenia Hookeri, a dual purpose plant already becoming popular. Howard & Smith, Los Angeles, list new roses already prize winners in competition both in the United States and Europe.

George H. Hecke, state director of agriculture, spoke:

HOW CAN WE IMPROVE THE NURSERY INSPECTION SERVICE?

A question which is ever before the nurserymen, and before agricultural police officials as well, is how to prevent the dissemination of plant pests and diseases on shipments of nursery stock and at the same time cause the least possible interference with the legitimate business of the

(Continued on Page 674.)

The Source and Guardian of Quality

There is in the factories of this Company a section occupied entirely by men whose business it is never to be satisfied with things as they are.

These men, constituting the Development Department, are charged with the creation and improvement of Goodyear products, processes and factory equipment.

Out of their devoted labors have come not only the present excellence of the things Goodyear builds, but the very machinery by which these things are made.

Not the least of their accomplishments has been to deliver to the public a steadily increasing value in these products without proportionate increase in cost.

The present remarkable character of Goodyear Cord Tires for passenger cars continually has reinforcement and benefit from this source and guardian of quality.

Nothing is withheld that intelligence, application and experiment can supply, in the effort to insure that worthiness of product which protects our good name.

The results of such endeavor are seen today in the capacity of Goodyear Cord Tires to deliver a kind of performance unapproached in any earlier type of tire.

Because Goodyear Tires and the sincere conservation service behind them afford uncommon satisfaction, more people ride on Goodyear Tires than on any other kind.

GOODYEAR CORD TIRES

Fall Plowing in the Citrus Orchard

By E. L. Koethen

RECENTLY a client asked the writer to give a newly bought orchard "the once over." It was one of those unfortunate pieces of property that has been changing hands quite frequently for several years. Each succeeding owner has "milked it" and then unloaded it on some unsuspecting "easy mark," who has in turn done the same thing with it. The care it has had has been just that which will keep it in presentable appearance for surface inspection. Very little fertilizer has been applied and the team work has been of the most superficial. The result is typical of all such pieces of property, and it has lost value and was purchased for a low enough figure to justify giving it some real care and building it up, as it still shows much vitality.

Our first test with a soil tester showed the most pressing need. We asked the new owner if in irrigating there was much waste water. "Oh, plenty of it." That was just what we expected. The plow sole was sealed up all over the place. Some of the trees were wilting, though it had been quite recently irrigated. The trees

in one small area had made quite a promising growth, and we found that in that spot the owner had dammed the waste water up and carried it into the spaces between the rows, and there being but little if any hardening of the plowsole there, the trees had had a drink and were happy over it.

We recommended an immediate plowing, which we think the only method of getting the trees in good order for next season's service.

Now what about fall plowing? Why not? After about August 1 the fruit is set fast. There is no special danger of making it drop. If there is to be any time of the year when a good plowing is to take place, this seems to be the one when least risk will be taken. It gives the trees time to recover from the shock before the active growing season begins. New roots will form where those growing near the surface have been severed. There is danger of starting new growth, it is true, especially if it is done early, but what of it? We had better have some new growth to freeze during a cold night than have a starved tree exposed to the frost. The injury will be more apparent on the vigorous tree

but less injury of a permanent character is done. The sooner the orchard gets rid of the starved condition due to lack of water, the better. No orchard can thrive where it is in such a condition.

But why allow a plowsole to form? It is preventable. By plowing at least once a year and with the use of cover crops it will not form. It seems to us that fall plowing is the safest and it can be so arranged as to come in when a summer cover crop is to be turned under, and in getting ready to plant the winter crop. If this is done it is really not necessary, under ordinary conditions, to plow in the spring if the grower prefers not to take the chances of disturbing the root system in the spring, which is really a critical period in the life of the tree. A disking will put the winter cover crop under if persistently pursued, and with less disturbance to the root system.

There is, however, one precaution that should be taken in case of fall plowing. Should the orchard prove to be dry underneath, as is likely to be the case, a prompt application of water should follow the plowing in order to prevent the trees suffering from drouth. We have seen an entire crop of oranges drop from the trees early in December because of a deep plowing under such conditions.

There is another advantage in fall plowing. It takes much more time

to plow than it does to disk, and usually the teams are not so busy at that season as when the time comes to get the orchards cleaned up in the spring. A day saved in the spring is of great importance.

DO WE NEED LIME?

Do California soils need lime? This has been answered, "Yes"; it has been answered, "No"; and if the truth were known we presume both would be found correct, for some do, some don't. Anyhow, here are some interesting points taken from the summary of "Use of Lime in Soil," which is Lesson 148 of Cornell Reading Course for the Farm. The first page of the cover shows an ideal New York farm resting upon five supports, organic matter, tillage, fertilizers, soil moisture, lime. These are termed fundamental factors in the maintenance or improvement of crop producing capacity of soil. From the summary:

In its application to the soil, the term lime is used to exclude any caustic or carbonate form of the element calcium or a mixture of calcium and magnesium. In its more technical and restricted sense, as used by the chemist and the manufacturer, the word lime refers only to calcium oxide or a natural mixture of calcium and magnesium oxide, which is commonly known as lump, stone, rock, fresh, or quicklime.

The use of lime in some form is necessary to maintain the productive ability of at least three-fourths of the cultivated soil of New York state.

Lime may have many effects on the soil, as follows: It will neutralize active acid. It creates a condition in the soil favorable for the growth of many valuable crops. Its presence favors the growth of many of the legumes and promotes the use of the nitrogen of the air by those plants. It improves the type of decay of organic matter in the soil with the formation of humus. It supplies nutrients in the form of calcium and magnesium for the use of plants. It may improve the tilth of the soil. It improves the sanitary condition of the soil.

Plants, including those useful in agriculture, differ widely in their tolerance of an acid condition of the soil. Each plant has a rather definite range of tolerance of active acid and of active alkali in the soil.

Acid soils may be recognized in the following ways: By the kind of plants that thrive on them; that is, whether these are acid tolerant or require large amounts of lime. By their reaction to certain tests, as the litmus paper test, the Veitch lime water absorption test, the Truog test, the muriatic acid test and the ammonia water test.

The amount of lime required by the different soils in New York ranges from a few hundred pounds on the more calcareous soils in the middle part of the state to several thousand pounds on the very acid soils of the higher and more remote hill lands.

Limestone deposits are confined to the main valley regions of the state and are associated with the more calcareous soil areas. Marl is abundant under the muck in the swamp areas through the middle and especially in the western section of the state.

Suitable forms of lime for use on the soil are: Burnt or caustic forms, consisting of lump and ground quicklime, hydrated lime and air slaked lime. Carbonate forms of lime, including pulverized limestone, marl and mussel shells. Other by-product forms of lime containing a mixture of any of the preceding forms.

The finer a lime material is pulverized the more efficient it is in the soil. Until the particles are reduced to a fineness of 1/50 inch in diameter, the efficiency of lime in any form is very low.

Either burnt (caustic) or carbonate forms of lime are suitable for use on the soil. Caustic forms applied to the soil change in a very few days to the carbonate form, and thereafter have the same effect as if they had been applied in that form. They should be used in amounts to supply equivalent quantities of available oxides.

Lime is leached from the surface soil very slowly and is retained for many years in a form available to plants.

The amount of lime to be applied should be determined after consideration of the degree of acidity of the

The Blending of Two Reputations

AWAY back in the beginning of modern American farming the pioneer builders of farm machines began their work. For more than three generations the genius and skill of good plow makers at Canton, Illinois, ran parallel with the skill and genius of good farm machine builders now united under the name of the International Harvester Company.

From the pioneer days down to date these industries were intent on providing the farms with quality machines. They were ever on the alert for improvement and progress.

When, fifteen years ago, this Company began putting practical tractors on the farms, the Parlin & Orendorff plow makers began the development of a superior line of tractor plows. As the **International Tractors** developed into popularity, so did the

sterling worth in **P&O Little Genius** win its way into leadership.

It was fitting, therefore, that eventually the International Harvester Company should join together the extraordinary success of **P&O Plows** and **International Titan Tractors**. For a long period now these reputations have been blending. **P&O Plows** are a part of the International line. International Harvester Tractors and **P&O Plows** have long been working together efficiently.

Many thousands of new owners of these long-famous plows and tractors, who are turning soils with them in every corner of the land, know that this close and necessary association of power and plow is making for better plowing and more completely successful tractor farming. **P&O Plows** and **International Tractors** recommend themselves.

Save Money—Buy Pipe From Us

Farmers, Miners, Builders—people in every kind of business are saving money buying used or renewed pipe from us. We sell every kind of pipe. Send in a list of your requirements today and get our prices. We have saved hundreds of people 33 1-3 to 50 per cent on their pipe bills. Here's a partial list of some of the miles of pipe we have in stock for immediate delivery:

8,000 ft. 6 Inch Riveted 16 Gauge
700 ft. 8 Inch Riveted 16 Gauge
5,000 ft. 12 Inch Riveted 12 Gauge
1,000 ft. 18 Inch Riveted 12 Gauge
800 ft. 22 Inch Riveted 14 Gauge
300 ft. 24 Inch Riveted 14 Gauge
500 ft. 36 Inch Riveted 12 Gauge
10,000 ft. light wrought iron 8 inch pipe with cast iron collars.

All above pipe thoroughly overhauled and inspected and ready for immediate use.

We also have large quantity standard pipe and screw casing, pressure tested and guaranteed.

Don't delay—write for our prices on your pipe requirements today.

soil and the degree of sensitiveness of the crop to an acid soil.

Frequent small applications are likely to be better than very large applications at long intervals. From one-half to one ton of burnt lime to the acre, or twice this amount of limestone, once in rotation of five years, is a fair application for the average soil. Strongly acid or very heavy clay soils should receive twice these amounts. A light, sandy soil, moderately acid, may give good results with only half these amounts.

The time and the method of application of lime are secondary considerations to the primary fact of its application. Thorough distribution in the soil is desirable. Application immediately after plowing will usually insure suitable distribution.

The use of a lime distributor is the most convenient method of applying lime. Some forms may be applied through the fertilizer attachment of the grain drill.

The sale of carbonate forms of lime for agricultural purposes comes within the scope of the law regulating the sale of commercial fertilizers. Each brand of carbonate lime must be licensed, and a guarantee must be given by the manufacturers of its content of calcium oxide and magnesium oxide.

FRUIT AND VEGETABLE INSPECTION

The fruit and vegetable inspection service by the state department of agriculture has been expanding greatly during the month of October and the prospects for still greater expansion appear to be most favorable. Orange shipments from Tulare County are just beginning and at the request of the shippers the standardization service has placed an inspector in that district to handle outgoing shipments. Ralph H. Gray, who has just closed out the grape deal at Lodi, began inspection work on November 8.

Orders for inspection have been placed for about 250 cars of Navel oranges.

In Southern California, as a result of cooperative agreement with the bureau of markets, standardized trade terms have been worked out for lettuce and tomatoes not only for the use of the inspectors in writing the certificates but also for the trade in quoting these commodities to Eastern buyers.

During the month a meeting was held at Brawley with the shippers of lettuce from the Imperial Valley. The trade terms adopted in the Los Angeles section were approved for use in the Imperial Valley and arrangements were discussed looking towards the inspection of the big Imperial Valley lettuce crop beginning about the first of the year by the state department of agriculture.

A meeting was held with the executive committee of the San Francisco Jobbers Association during the latter part of the month and the demand for carlot inspection at the shipping point is such that a man will be placed permanently on the San Francisco market in the near future who will certify not only to potatoes, onions and other vegetables moving out of San Francisco, but also to the large crop of broccoli, cauliflower and cabbage from the Colma section and artichokes from the Half Moon Bay district.

Inspection of about 200 cars of celery from the Antioch-Walnut Grove district has already been requested and as this stock is moving at the present time an inspector will be placed in this section at once.

The value of the inspection service has been attested to by all and it is interesting to know that of the 500 cars of Gravenstein apples inspected and certified to in the Sebastopol section, not a single car was rejected.—F. W. R.

Each of us works for the benefit of the community. Each family lends to the progress of the town, city or village. None of us can get away by ourselves to thank the Maker that we are not like other men, for we are like the rest of them.

Prof. E. L. Overholser of the state university is giving a series of pruning demonstrations in the prune orchards of Napa County.

Blast the Holes this Fall

Are you going to plant trees next spring? If you are, now's the time to shoot the holes for in the fall the ground is in prime condition for blasting.

And now's the time, too, to cultivate your bearing orchards by blasting around the trees with

HERCULES FARM DYNAMITE

If you want to know more about the ways in which explosives can help you with your work, send to the Hercules Powder Co. for a copy of "Progressive Cultivation". This 68-page illustrated book tells you how to plant trees, cultivate your bearing orchards, clear land, dig ditches, blast subsoil and do scores of other things with the help of explosives.

Every rancher or orchardist should have one of these books—and he can get it for the asking.

Hercules Farm Dynamite is for sale at leading Hardware and Implement dealers

GREAT CONVENTION WEEK AT
FRESNO

(Continued from Page 663.)

cation as to what constitutes "Grade A," or "Fancy Pack." In this the department of agriculture at Washington has made certain rulings which will be of value in educating growers, shippers and consumers. As a rule shippers are ready to follow regulations as to a standard. Reputation and dependable market will result in surer profit once general acceptance of standardization is secured. Many shippers have extended financial aid to state standardization. They are now paying five dollars per car for certificates, which are proving of great value. Fees for state certificate of standardization are now established at five dollars per straight car, ten dollars per mixed car and two dollars per half car. Full standardization has not yet been extended to citrus fruits, which, in a way, have their own standards. However, it is probable the state regulations will soon be issued and a regular standard established in

addition to regulations as to color and sugar content now prevailing.

The work of the Agricultural Legislative Committee was presented by the chairman of the committee, C. C. Teague, and by the executive secretary, R. N. Wilson. G. W. Pierce, chairman of the budget committee, also touched upon legislative needs and the discussion was led by Frank T. Swett. This committee has one big job between now and the convening of the state legislature in January. It is contemplating recommendations as to revision of the several enactments now affecting agriculture, the presenting of some entirely new bills, and, through invitation on the part of the university and other state institutions, is investigating budgets which it is hoped the coming session will pass. Several members of the committee anticipate spending days with the department of agriculture at Sacramento, investigating its needs, and with the university authorities at Berkeley.

Touching upon the subject of the budget of the department of agricul-

ture, Mr. Pierce said that the department is performing a valuable service of protection to the farmers, and that the present budget for the department is entirely inadequate. The proposed budget should not only be passed in full, but it should be increased, he said. He also advocated additional protection for the state forests.

In the transportation question one of the most vital points made in the convention was that regarding the ruling of the interstate commerce commission seriously restricting diversion privileges. This discussion led to instruction of the convention that communication be had with the interstate commerce commission requesting immediate reconsideration of this question. The following wire was sent by the director of agriculture to the secretary of the I. C. C.:

"Relative to the new national reconsigning rules becoming effective December 1, 1920, particularly to that portion affecting the fruit and vegetable business of California, I as presiding officer of the 53d State Fruit Growers and Farmers Convention, now

in session at Fresno, have been instructed and advised by resolution adopted in this body, that the contemplated rules and regulations would be inimical to the interests of these industries in California, since any curtailment of the present privileges of reconsignment would operate to obstruct the marketing of fruits and vegetables already seriously affected by the prevailing high rate schedule and shortage of rolling stock.

"Any regulations at present which will tend to prevent the widest possible distribution of farm products and to prevent the movement of crops to new and increased markets will be reflected in restricted production, which in turn vitally affects the well being of the farmers of California.

"In the consideration of the foregoing facts I earnestly urge suspension of these proposed rules or tariffs for the national diversion or reconsignment, and respectfully ask in the name of the Farmers and Fruit Growers Convention, here assembled in annual meeting, that a rehearing be granted. In order that California shippers and growers may be given an opportunity to present their case before your honorable commission."

The resolutions committee, consisting of Wylie M. Giffen, president of the California Associated Raisin Co.; H. C. Rowley, editor of the California Fruit News; Charles H. Bentley, vice-president and sales manager of the California Packing Corporation; C. B. Messenger, editor of the California Cultivator; George Farrand, attorney for the California Fruit Growers Exchange; H. C. Dunlap, secretary-treasurer of the California Prune and Apricot Growers; Frank T. Swett, president and manager of the California Pear Growers; H. G. Ryan, horticultural commissioner of Los Angeles County; George W. Pierce, president of the California Almond Growers, presented resolutions touching many phases of the state fruit growers activities and needs, all of which were unanimously adopted. Greatly condensed, these resolutions were:

1. Recommends purchase of lands by the federal department of agriculture, which are now being used by the department in a series of phylloxera and other investigations, but the leases on which expire within a short time. The results of these experiments will be lost if these lands are allowed to revert to private ownership. These sites are near Fresno and Oakville, Napa County.

2. Suggests that due recognition of the farming industry be given in the election and appointment of public officers and administrative officials in state and national affairs wherever their duties are germane, to the end that adequate representation of this important industry may be had in the councils of our affairs political.

3. Fully endorses Truth in Fabrics bill, now before the national congress.

4. Requests board of regents of the University of California to include an item of \$10,000 annually in its budget in order that the fruit products laboratories in Berkeley and Davis may increase the scope of their work, which is efficient but not sufficient.

5. Suggests that greater power be given state director of agriculture in fruit and vegetable standardization.

6. Whereas, the permanent prosperity of our nation rests fundamentally upon the welfare of the farmer and producer, and in addition the greatly increased costs of labor, transportation and materials in connection with the unprecedented fall in rates of exchange have combined to encourage great imports of lemons, raisins, figs, canned fruits, olives, olive oil, rice, beans, walnuts and almonds, that the ways and means committee of the house of representatives be petitioned to give special consideration to the necessity for revision of tariff law, and in connection with the tariff that particular attention be given to the need of maintaining international trade relations to the end that favorable consideration may be shown to countries which in turn show favorable consideration to the products of this country produced far in excess of domestic demand and which require foreign markets, such as the dried prunes, apricots, peaches, pears, raisins, canned fruits and canned vegetables of California. It is recognized that permanent foreign trade of value can only be developed in exchange of commodities, but it is believed that these

Allwork Kerosene Tractor

ALLWORK KEROSENE TRACTOR
pulling Knapp Orchard Disc Plow in a
Santa Clara Valley apricot orchard.

Scientifically Designed for Burning Kerosene

The ALLWORK is one of the few tractors that can perform satisfactorily while burning kerosene. Here is the reason: Every detail of the staunch ALLWORK engine—from the intake to the exhaust—is scientifically designed to adapt it for kerosene consumption.

Attempts to convert gasoline engines into kerosene engines by means of "attachments"—such as special carburetors, stoves, hot spot manifolds, water sprays, and other devices—have not stood the exacting test of time.

The ALLWORK KEROSENE TRACTOR—because of the inherent correctness of its design for burning kerosene—has established an eminent record covering years of successful performance.

Small and Powerful

In spite of its unusually low cost of operation, the ALLWORK KEROSENE TRACTOR has more power than has ever before been built into a tractor so small. It is only 50 inches wide, 55 inches high, has a 75 inch base, and turns in a nine-foot radius. These specifications, combined with an abundance of reserve power, make the ALLWORK admirably qualified for all work in California.

OLIVER, KILLEFER or KNAPP PLOWS

When you order your ALLWORK TRACTOR, equip it with implements from exceptional Railsback stock.

We can furnish either Oliver implements, Killefer tools, or Knapp Orchard Disc Plows—all eminently fitted for local conditions.

We urge you to visit our salesrooms,
or write to us for particulars.

should not be of competitive character.

7. Expresses appreciation of the work of Director Hecke, with resolution requesting state legislature to give favorable consideration to the budget as presented by the director.

8. Requests state railroad commission, in its hearings for the purpose of readjustment of rates for hydro-electric power, to give due consideration to the needs of agriculture, at present faced with rapidly declining prices on its products, and that in case of shortage power service for non-essential purposes be restricted and determined largely by the needs of agriculture.

9. Calls attention to the inadequacy of salary of county horticultural inspector, which is limited by law to \$3.50, and favors amendment to the statute which will allow the payment of proper salaries.

10. Refers to the work of Frederick Maskew as chief deputy quarantine officer of California, during whose administration not one major pest of horticulture or agriculture has gained a foothold in California, and "whereas, Mr. Maskew has now retired, it is resolved that the fruit growers of California express their appreciation of service rendered."

11. Reaffirms the action of the 52d State Fruit Growers which met in 1919 at Chico, and fully endorses the proposition of Col. Marshall, formerly chief of the U. S. geological survey in California.

Thanks and fullest appreciation was expressed to the people of Fresno, its chamber of commerce, the press and others for the courtesies extended during the convention.

The Banquet

Something over 200 fruit growers and their wives filled the banquet hall. An especial honor to the convention was extended by Governor Stevens, who was present and made an after dinner talk. In addition to the talks by Wylie M. Giffen, who acted as toastmaster, and the governor, addresses were made by Mr. Anewalt of the Santa Fe, Mr. Kelley of the Southern Pacific, with a bunch of funny stories thrown in by an entertainer.

It was unfortunate that the only available room for holding a convention was in the city auditorium, an immense building with capacity for thousands. As but few of the local producers found it possible to attend the convention, the few hundred who were there found themselves lost in the great structure. It was, however, a good convention, we believe above the average and attended by thoroughly representative producers of California.

It was often remarked during the convention that it was greatly to be regretted that local people gave so little attention to the magnificent program. Fruit growers within auto distance could readily have filled the great auditorium, and the interests of California fruit growing would have been materially advanced thereby.

The farm papers were all there, and the department will later issue an abridged account of the addresses and discussions, but the best effect of those conventions is lost where one is not in personal touch with them.

DEHYDRATION

A part of the state fruit growers convention and yet held under the auspices of the University, with E. M. Sheehan of the Grape Exchange presiding, was the convention of fruit dryers or, as expressed in the program, dehydration convention. Prof. Cruess of the university showed charts or rather plans, of artificial fruit dryers and referred to the specifications and gave particular points to be observed in the construction of a dehydrator.

Prof. E. R. de Ong discussed methods of control of dried fruit insects. He exhibited a mite which is becoming somewhat serious in infesting prunes. Some of these, confined in a glass jar, reduced a number of prunes almost to a powder. The principal method of preventing infestation of dried products by insects is through cold storage. It has been found that where dried fruits are stored in temperature of 40 to 50 degrees the insects are entirely dormant; at 35 to 46 degrees, held for a period of three months, all insects are killed, while if held at 22

to 33 degrees two months or less is sufficient to destroy all insect life.

Arthur W. Christie gave one of the most complete descriptions of the process of dehydration, different methods of building dryers and specific details of the handling of the fruit.

Workers who were responsible for much of the comfort of attendants at the convention were Fred P. Roullard, county horticultural commissioner, and Fred K. Howard of the service department of the Associated Raisin Company. These two men were pressed into service at the last moment because of absence from the city of chamber of commerce officials who had first planned the entertainment. Messrs. Roullard and Howard were ably assisted by Mrs. Roullard and Miss Scott, who acted as registration clerks and general information bureau.

CERTIFIED SEED POTATO GROWERS

President George H. Peters of the California Certified Seed Potato Growers presided at what he characterized as one of the most helpful conventions and the greatest advance step yet made by California growers. The meeting was held in conjunction with

the state convention and called out a large attendance of potato growers from as far north as Sonoma County and on the south from Los Angeles County.

This convention, like others held in Fresno the same week, had to do with standardization more than any other one topic. A thorough discussion of federal standards was had and the question asked as to the ability of California growers to meet the requirements of government standards. It was the general opinion that these standards, together with market requirements and ability to secure fair treatment, would be more nearly realized under a reputation which California potatoes could secure through standardization. In fact, standardization was the principal subject under discussion rather than certification of seed. However, W. V. Shear of the department of agriculture, who has charge of seed certification, presented some most forceful object lessons in several packages of potatoes which he purchased on the Fresno market and used to enforce his claim as to the need of planting more dependable seed and of harvesting and marketing a more uniform standardized crop.

T. H. Lambert reviewed 20 years history of potato growing in Los Angeles County and endorsed standardization. The benefits of standardization were shown graphically by Messrs. Read of the state department, Truax of the federal department and others. It was generally considered that standardization of marketable potatoes could be more quickly accomplished in California than could standardization of varieties. "U. S. No. 1" will probably soon be a term which will be understood in California, and which, if generally followed by potato growers, will advance the price and reputation of California grown potatoes.

Resolutions were passed requesting the greatest watchfulness for Colorado potato beetle, which is near the boundaries of California both on the east and the north. Another resolution called attention to the meagerness of scientific investigation either by the federal department of agriculture or by the state and requesting this investigation to be taken up and the industry given deserved attention.

The prohibitive transportation rates granted by the interstate commerce

Profit or Loss!

A truck is made for profitable work—not play. The stalling of your motor car may cause inconvenience, but the stalling of your motor truck causes actual financial loss.

If it refuses to work—on the farm or on the road—it not alone fails to do its job, but it wastes your time and causes expense. It may also result in damage to the load through decay, rain or exposure.

Your truck, like your tractor and stationary engine, must more than "pay for its keep." And, as ignition is the chief factor in engine dependability, it is important that you use Bosch Magneto Ignition.

Nearly four million users have learned that Bosch Ignition gives utmost dependability, power and economy in an engine. Be positive about dependability; insist that your engine be Bosch Magneto Equipt.

A Bosch Service Station can install a Bosch Magneto on practically any gas engine.

Eucalyptus on Line

Along my line of fence eucalyptus trees have been planted. They were cut off some time since, but are now growing again. Some stand on line, some on my neighbor's side, and some on my side. My neighbor forbids me to trim the trees along my side or clear along the fence. The trees are taking the nourishment from my land for a distance of some 40 to 50 feet. Can I bring action for damages? How far from the dividing line must such trees be planted? Can I compel my neighbor to trim or destroy the trees or let me do so?—Subscriber, San Luis Obispo.

The trees along the neighbor's side of the line are his property. The trees the trunks of which are wholly or in part on the dividing line are the common property of yourself and your neighbor, the interest in each of which is identical, but which neither may

cut nor injure without the consent of the other. The trees upon your side of the line are your property, which you may grub out and do with as you please, being sure, of course, that they are actually upon your side of the line. There is no rule or law requiring trees to be placed at any distance from the dividing line, but you are entirely within your rights to dig a ditch along your boundary line, cutting off all roots, and it is probable that where you can show that such action is necessary to protect your own property that you might hold the neighbor liable for the cost of constructing such ditch, although there is no decision upon this point. The decisions have been directly conflicting as to whether or not the neighbor can be enjoined from permitting the roots of his eucalyptus trees to project in the land beyond his own. The better opinion is that he can be so enjoined. There is now a case pending in the appellate court which will undoubtedly determine the law in this state. The practical result of such injunction would be that the neighbor would be forced to grub the stumps, as he could not other-

wise control the growth of the roots.

Husband's Property

My husband has children by a former wife. We have no children. At the time of marriage he owned a ranch which has since been traded to good advantage so that his property is worth more than double as much as at the time of marriage. It all stands in husband's name. Is this community property? If the husband makes a will can he leave the wife less than she would legally have a right to?—Subscriber, San Fernando.

All property owned by the husband before marriage or that acquired afterward by gift or descent, with the rents, issues and profit thereof, is his separate property. Such separate property is absolutely subject to the disposition of the husband by will, in which the wife would have no interest. The wife does have an interest by law in one-half of the community property, which consists of all other property than the separate property of the respective spouses. This one-half interest in the community property the husband cannot affect by will. Whether the increase in value of the estate of the husband consists of any part of community property is a question of

the particular facts so that it would be almost impossible to give a definite opinion, but you should take the matter up with someone who can make a more detailed examination. The presumption would probably be that it is separate property and that if the husband dies leaving no will the wife would take one-third and the children two-thirds, but such distribution could be in any way changed by will.

Legal Name

On my second marriage, my son, who was very young, took the name of my second husband. He is now of age. Would it be legal for him to be married under my second husband's surname? If not, what course should be taken?—Subscriber, Pomona.

Under the early English common law, great importance was attached to the Christian name, as that was a designation conferred by baptism, while the surname was frequently a chance appellation assumed or given to the individual much as nicknames are now conferred upon people. In time, it became the custom for all males to bear the name of their parents, but there is nothing in the law prohibiting another name, if he so chooses. There is no penalty or punishment for so doing or any consequences growing out of it. The fact that such instances rarely occur may be readily accounted for by reason of the lack of any object to induce a man to change his name; by reason of pride in the name of his ancestors and that unless a man goes to a place where he is unknown, it would be difficult to have people refrain from calling him by the name to which they are accustomed. In the case of one who has adopted a different name, engaged in a business by that name, and has been known by that designation, there is no reason why he should not continue to use it, and it has been held that where a contract, agreement or obligation has been entered into or any grant made under that name, such name shall be valid and binding, as he has been as effectually named by the new name as that which he previously bore. Many instances of such change of name are noted, such as President Grant, who was christened Hiram Ulysses Grant; President Cleveland, who was christened Stephens Grover Cleveland; Senator Mitchell of Oregon, who was christened by the original surname of Hipple. He afterwards adopted the name of John H. Mitchell and was senator for three terms under that name for the state of Oregon. There are provisions whereby a person may petition the court for an order changing the name, but it would seem under the circumstances presented above that the name as adopted is in effect the legal name of your son.

FOREIGN TRADE, THE FARMER'S HOPE

By E. W. Wilson

The farmer's point of view towards making a profit out of the management of his farm is no different from the viewpoint of the merchant in the management of his store. Both are equally concerned with all the problems that make for better returns upon the labor expended and the money invested. American farmers are approaching the time when it will be imperative to find out the purchasers of their products. The clear mind will need the sharp pencil and the aid of the compass to chart the course that will produce the larger net income in order that the higher cost of production may be provided for. Without reference to the kind of agriculture he is interested in, he must be alive to every avenue of information that will aid in increasing pro-

FAIRBANKS-MORSE "Z" FARM ENGINES

As Clean Cut as a Thoroughbred

The clean-cut business-like design of the "Z" Engine was not just accident. A farm engine, to be efficient, *must* be properly designed. The "Z" has graceful, natural lines—free from geegaws.

The parts are strong—weight where weight is needed. Strains foreseen—contact parts case hardened—all parts carefully, precisely made by accurate machine work.

Looks like a thoroughbred—is one. Delivers a steady flow of power—runs smoothly—operates economically. Correct design and precision methods give the "Z" its built-in quality. It is a mighty pleasing engine to look at.

Other "Z" features are: Runs on kerosene, as well as gasoline; Bosch magneto; more than rated power; parts interchangeable; long life.

Let your nearby dealer show you why you should have a "Z."

duction and decreasing cost of unit production. Good soil is the starting point. Modern machinery, intelligent plans and dependable labor are first aids. The farmer's responsibility is not ended, however, by large production and low unit costs. Large crops, without a market, do not make a profitable investment out of farming.

To the merchant, buying without selling is not merchandising, and to

Correct lubrication makes a good truck better

You cannot expect maximum performance and long service from your truck unless it is lubricated correctly. Correct Lubrication is a science.

The recommendations of our Board of Lubrication Engineers embodied in the Zerolene Correct Lubrication Chart are designed to better the performance and lengthen the life of trucks, tractors and automobiles. Get a Correct Lubrication Chart from your Zerolene distributor.

the farmer, producing without knowing where he is going to market his goods usually means bankruptcy. Europe absorbs our surplus crops of cotton, corn, wheat and barley. Foreign countries located everywhere furnish markets for the surplus production of our canned and dried fruits, apples, oranges, raisins, lemons, etc. In fact, there are few articles that come from the soil whose price is not influenced largely or controlled entirely by foreign markets. Modern farm machinery, better fertilization of the soil, and a general improvement in the seed used have increased our agricultural products to the point where our prices are very largely dependent upon foreign demands. That being the case, every tiller of the soil in this country should make it his business to know where the particular market is located that influences the price of his products. He should also inform himself upon how these markets are to be reached as well as the cheapest way his products can be delivered to these points.

Unless the farmer becomes interested in these problems and makes his interest manifest to his congressman, our foreign trade will suffer in dollars and cents as the result.

BUILDING FEED

Farmers have for years wrestled with and solved more or less satisfactorily the various feed problems presented by their occupation. They have had to deal with the question of the balanced ration in hog feed, dairy cow feed, horse feed, chicken feed and even plant food.

And now appears on the farmer's horizon a scientist who tells him that even his buildings must be nourished; that a house, barn or outbuilding that is kept painted with good paint will last over a hundred years, whereas an unpainted one will fall to pieces in ten years; that a neglected building dies just as surely as a horse or cow that has nothing to eat.

The argument is logical from a scientific standpoint, and it behooves farmers to attend to the proper nourishment of their buildings, for we all know that the cost of rebuilding and of repairs is almost prohibitive nowadays.

EXTERMINATE THE RAT

Untold sums of money are lost each year through the agency of rats. Rats are vectors of parasites that infest hogs, cattle and human beings. Rats also are carriers of fleas that communicate bubonic plague to human beings.

The time approaches when vast quantities of dried beans, rice, peas, cereals and grains will be placed in storage awaiting shipment or for future consumption. A comparatively small outlay for cement may save thousands of dollars worth of destroyed or spoiled foodstuffs lost through the ravages of rodents. Where ventilation is desirable in a storage room, protect the openings by setting coarse wire screen in cement to exclude rats and mice.

It is possible to make a city rat proof—why not the entire state?—B. A. R.

"The manufacturer of sweet cider is held responsible for the alcoholic content thereof, and in consequence he should so preserve or sterilize his product and market it in sterilized glass or other containers that the alcoholic content will remain within the limit fixed by law until consumed. Cider containing one-half of one per cent or more of alcohol by volume is regarded as an intoxicating liquor and the manufacturer thereof is required to procure a permit and give bond. Sales of such fermented cider may be made only in wholesale quantities of five wine gallons or more to other permittees and pursuant to permit of purchase, Form 1410."

Forest lookouts lead lonesome lives, but not devoid of excitement. At Mount Eddy in the Shasta region, recently, the United States department of agriculture forest service is advised, lightning struck the lookout station, tore a four foot hole in the wall and stunned the lookout, J. S. McClemons. He recovered just in time to save the house and his own life. Thirty-five lightning fires were caused in that vicinity the same day.

There's a BEAN for orchards of every size.

The "Bean" Does the Work

Sprayers come and sprayers go—but the Bean stays with the fruit grower year in and year out—helping him save his crops from devastating pests, get more and better fruit, and make bigger profits. The Bean DOES the work. It insures—

- high pressure
- more gallons of liquid per minute
- speedier work
- more thorough covering
- absolute dependability at all times

CALIFORNIA NURSERYMEN

(Continued from Page 666.)

nurserymen and the least possible expense to the state. I admit that our present methods fall short of what is needed; this is simply demonstrated by the fact that no two states in the Union have similar methods of handling the problem, showing that agricultural police themselves are not agreed.

The ideal system, that of inspection of all shipments of nursery stock at the point of origin by inspectors responsible to the state, cannot be put into force in California at this time on account of the expense to which the state would be put. We must, for the present at least, content ourselves with an attempt to so modify our present methods as to cause the least inconvenience and loss to the nurserymen, at the same time, of course, retaining all our present safeguards.

The main criticism of the nurserymen against the system in force in California is, I believe, that while they exercise every care to ship only clean stock, some infested material occasionally gets by them, with the result that it is condemned at destination. What we must work toward is a reduction of the opportunities for such infested material to leave the nursery. This can be brought about by two lines of action, both of which to my mind should be carried out. First, the state department should give the nurserymen every assistance in the cleaning up and keeping clean of their nurseries. The state should be able to inspect at least the most important nurseries once a year, not for the purpose of issuing to the nurserymen certificates stating that the nursery is "apparently free from dangerous pests and diseases," but for the purpose of giving the nurseryman a complete survey report of the condition of his stock so far as pests and diseases are concerned, with specific instructions as to what should be done to clean up, and also should give the nurserymen direct assistance in particularly difficult cases. This, in itself, would in time very greatly lessen the number of condemnations at destination. At the same time the state department of agriculture should undertake a serious study of methods of treating nursery stock for disinfection, with the object of being able ultimately to recommend methods of treatment which would make it safe to ship nursery stock anywhere without inspection, the treatment, of course, to be done under official supervision.

Perhaps it will be advisable to raise the registration fee to, say, \$10 per year, the fund obtained to be used in making the survey reports and making recommendations for cleaning up the stock. Perhaps this work should be done at the request of the individual nurseryman, for which he would pay a fee covering the actual expense of the service rendered him. The other project, concerning the working out of better disinfecting methods, should, I believe, be supported by a special appropriation from the legislature.

Dr. J. C. Whitten, professor of pomology, University of California, read a paper entitled "Facts for the Nurseryman to Consider in Bud Selection," in which he treated of seedling varieties, bud varieties or sports, improvement by bud selection, and experiments with various stocks. Max J. Crow, Gilroy, gave a complete history of the organization, development and activities of the Nurserymen's Bud Selection Association of California, followed by a strong affirmative argument on the subject, "Is Bud Selection Worth While?" by J. H. Bones'ee, Kingsburg. Numbers on the program not listed herein were those spoken, for which no manuscript is yet available.

Business Again

New and unfinished business opened with the annual report of Secretary-Treasurer Kruckeberg, followed by reports of regular and special committees. Chief among the latter was that of the auditing committee. J. D. Meriwether, chairman. He advocated an increased reserve in the treasury and presented a new plan of contribution to that end, a sort of "gentleman's agreement." Thereunder nurserymen doing a business of \$10,000 a year were assessed \$10 per annum and

larger business in proportion up to a maximum of \$200, the agreement to cover a period of five years, to be retroactive to include the past season, the first assessment to be now due and payable. Sufficient signers were found within the hall to insure an income double that of any past year. The executive committee were instructed to have the Wickson papers of past and present published in book form at the expense of the association.

The committee on resolutions offered one on the death of C. W. Ward of Eureka, copies to be sent to his immediate family and business associates. One endorsed and commended the work and aid of Chas. Sizemore, traffic secretary of the American Association of Nurserymen. Another recommended to President-elect Harding the advisability and importance of having a Californian as secretary of agriculture in his cabinet. Last, but not most, a sweeping resolution thanking everybody and everything in any way contributing to the success of the convention or the entertainment and comfort of delegates and visitors. All passed without a protest.

The election of officers presented no ripple on the smooth and unruffled surface as the recommendations of the nominating committee found favor with all present. For the year 1921 the association will be governed by: President, Roy F. Wilcox, Montebello; vice-president, J. W. Barnicott, Newcastle; secretary-treasurer, H. W. Kruckeberg, Los Angeles. The executive committee are Fred H. Howard, Los Angeles, chairman; J. D. Meriwether, Ontario; J. E. Bergtholdt, Newcastle; E. B. Washburn, Pasadena; Max Crow, Gilroy. The 1921 convention will be held in Pasadena late in October. It will be the aim to join with the Avocado Association's convention so all may get a chance at the great avocado dinner and with the Pasadena Horticultural Society so that every visitor may see one of their famous flower shows. Some convention, boy!

LADIES AUXILIARY

The Ladies Auxiliary of the California Association of Nurserymen featured the most popular assembly of the week. Under their auspices the program was supplied by the ladies clubs of Fresno. This was held in the Woodman Hall, which was packed to the walls. The regular session of the auxiliary was presided over by Mrs. John S. Armstrong, the vice-president, the president, Mrs. John Vallance, not being able to attend. Officers elected for the coming year are: President, Mrs. D. W. Coolidge of Pasadena; vice-president, Mrs. John S. Armstrong, Ontario; secretary, Miss Rose Wershing of Ontario; treasurer, Mrs. Fred H. Howard of Los Angeles. Other members of executive committee are Mrs. T. R. Hills, Mrs. J. D. Meriwether, Mrs. R. M. Teague and Mrs. John Vallance.

GREAT CONVENTION WEEK

(Continued from Page 671.)

commission were given a rap in another resolution and a most respectful suggestion made that the commission revise the ruling so as to give producers opportunity to market this invaluable food crop.

Another resolution called for the appointment of a delegate to attend the budget hearing by the legislation committee, to be held in the department of agriculture, November 23.

The final resolution endorsed the U. S. standard of pack and urged its acceptance in California as soon as possible.

Mr. Shear reported that the certified seed of the state would this year aggregate about 35,000 sacks. Mr. Olson, one of the largest potato growers of Los Angeles County, felt that every encouragement should be given to the production of dependable, certified seed and to the securing of a higher reputation for California grown stock.

The canner's viewpoint and, in fact, some of the problems and difficulties confronting canneries, were given in an address by Charles M. Bentley, vice-president and sales manager of the California Packing Corporation of San Francisco. Mr. Bentley said:

In order to have a clearer understanding of the situation today, as affecting all growers of apricots,

peaches, pears and other canning varieties, whether said growers actually sell to canners or not, it should be borne in mind that prior to the war California was exporting about 25 per cent of her canned fruit. This went chiefly to Great Britain as nearly all other countries of commercial importance maintained high import duties, in many cases prohibitive tariffs. During the war the demands of our own army and navy and of the allies was greater than the supply. Commercial trade was to some extent cut off. Production was encouraged and greatly increased. Following the armistice the commercial trade, which was largely restricted during the war, reopened. Domestic as well as foreign demand was heavy. 1919 witnessed an active market with speculative features and the entire pack of canned fruit was absorbed. Similar conditions, so far as domestic markets are concerned, continued well through the earlier half of 1920 until after the pack of the current year had been largely sold. Foreign buyers who bought heavily in 1919, some anticipating the opening of a market in Germany, some purely speculative, have not operated this season, partly because of a surplus carried in the foreign markets and partly because of the unfavorable prevailing rates of exchange.

Out of sympathy with the market conditions the pack has been restricted in California as well as elsewhere. The coal and railway strikes of last winter and spring caused a shortage of tin plate and a consequent shortage of cans which further restricted operations. Generally speaking, the wholesale buyers have bought very conservatively, anticipating a decline in prices. Their activities have been further restricted by the fact that the enormous increased costs for all goods they were carrying required more capital and more funds than many wholesale grocers have at their command. So there is some unsold stock in California, but not so large as to give any alarm if the normal consumption of the winter and spring develops and wholesalers do anything like the normal business.

These conditions confront the industry as a whole, whether canneries are operated in a cooperative way by growers or by the ordinary corporation. If conditions are prosperous there is no reason why a cooperative cannery should not prosper if operated by experienced people. The mere fact that the people controlling the business are fruit growers is no disadvantage, assuming that they permit the business to be run on its merits; nor, for that matter, is it any advantage. In the ordinary enterprise, the stockholders hazard capital; in the cooperative enterprise, the growers hazard returns on their crops. In either case the success or failure will be determined by the value of the location, the management and general trade conditions. Cooperative enterprises among growers have rendered valuable service to the producers of many of California's products. In most of these activities the producer turns over to the organization a product which requires very little added expense to prepare it for market. In the canning business, however, the raw fruit is comparatively a less important item of cost. In some varieties, in normal times, the labor costs more than the fruit; often the can costs more and the sugar also. So the cooperative cannery should be regarded by the grower from the point of view of making an investment, rather than as a means of finding a profitable market for his crop. This for the simple reason that for \$100 worth of fruit there must be about \$400 available for labor, cans, sugar, other materials and expenses. In recent years any cannery should have prospered, but, as we come into a period of falling prices and deflation, only those which are favorably located and economically administered can be profitable, whether they be cooperative or otherwise.

The period of deflation is well advanced in this and other countries. It will bring serious losses everywhere, and while we are likely to hail reduced prices with a cheer, so long as they relate to other people's goods, and while we recognize that such a period is not only inevitable but even desirable, we must also remember that the process of falling prices is even more dangerous than the process of rising prices. The latter hurt people

as consumers, while falling prices hurt people as producers and merchants. If business is unprofitable there will be curtailment of enterprise, decreased supply and unemployment. Those who have incurred debt for what they bought at high prices will suffer, but their creditors will also suffer. The poor merchant is likely to hold his stock around his cost figures in the hope of avoiding loss. He gets little business and is thrown into bankruptcy. The wise merchant gradually takes his loss, continues doing business and ultimately recovers. As someone has said, "It is better to climb down, than to fall down, or be thrown down."

This is the market condition, which producers, manufacturers and merchants generally are facing. The falling prices make the farmer less wealthy on paper than he thought he was. The other factors are similarly affected and it is necessary that this process should continue until our price levels are put on a competitive basis which will enable us to sell surplus farm and factory products in foreign trade. The process will involve unemployment, reductions in wages and cost of materials, but for the welfare and prosperity of the nation it is devoutly to be hoped that prices for farm products will never fall below the point where the farmer is encouraged to produce.

The most serious problem confronting the fruit industry is that of securing adequate and profitable markets. Domestic markets may be stimulated, but in the face of the impending increase in acreage, foreign markets must be secured and developed, not merely for the canned fruits, but even more for the dried prunes, apricots and pears.

Mention has been made of the important part foreign buyers have played in establishing a profitable market in the past and particularly during the war. It should be remembered by the prune growers that Germany was a very large buyer before the war. More than 50 per cent of the prunes and dried apricots were exported even before the war. In 1913 Europe bought nearly 70 per cent of our dried prune crop and more than the entire crop of dried apricots, taking some 1912 carryover. Heavy purchases were made in 1919 by British and Scandinavian buyers; very little has been bought by them in 1920.

One of the important factors in preventing buying is the much discussed and little understood question of exchange. The foreign buyer has had to reckon on what he regards as our high prices, but when he comes to the actual paying for the goods in our money the British merchant finds that he will have to pay over 30 per cent more to transfer his funds into those of this country.

If you went into a shoe store and saw a pair of shoes listed at ten dollars and offered to buy them, tendering a ten dollar bank note, and the shoe dealer said, "No, I do not want that kind of money; I want gold coin," you might try and get gold coin at the bank. Suppose the bank said gold was at a premium and you might have to pay \$13 in bills to get the \$10 in gold. Your shoes would cost, not \$10, but \$13. This very crude illustration may give you some idea of the predicament of the foreign buyer who might be satisfied with a quotation of 15 cents per pound on prunes, but would refuse to buy when he discovers that to get the 15 cents in United States coin he will really have to pay 20 cents. If you found a shoe dealer who would sell the pair of shoes of nearly equal quality and who would take your bank notes in payment, he would be likely to sell you the shoes. So the foreign buyer of canned fruits is being tempted to buy Australian, French, Canadian and Spanish canned fruits because his money is worth more in dealing with those countries. This condition is directly affecting every grower of apricots, peaches and pears, whether he sells to the canner, or dries his fruit, or ships fresh to the market. In the case last named, he is likely to have more competition with other similar fruit, which might have gone to the canner or drier had there been a better demand for such products. So we are all concerned for the development of foreign markets to take care of the increasing production in our state.

Farm Bureau Federation Convention

Secretary Coverdale of the American Farm Bureau Federation announces that plans are rapidly shaping for what promises to be the biggest gathering of agricultural leaders ever assembled, December 6, 7, and 8, at Indianapolis.

The keynote and central idea of the convention is to be the formulation of a national agricultural policy. President Howard has invited a formidable array of the nation's agricultural leaders to work together in formulating such a policy, and speakers of national reputation have been secured to discuss various phases of our national agricultural problems from their respective viewpoints.

Sir Auckland Geddes, the British ambassador, will discuss international relationships with reference to agriculture. Other speakers are Secretary of Agriculture Meredith, Herbert Hoover, former Secretary of Commerce Redfield, Henry Wallace, Chief U. S. Bureau of Roads McDonald.

Delegates from at least 37 states will be present and advance reservations indicate that a very large number of visitors from near by and even distant states will be present. In addition the various commercial organizations, private business houses and others vitally interested in any broad, concerted action taken by agriculture will have representatives present.

Some of the larger problems to be included in the discussion of policies are tariff, transportation, taxation, labor, credits and financing, marketing, collective bargaining, land tenancy, governmental policies, merchant marine and foreign markets policies, and

national legislative measures. Numerous local summaries of national agricultural policies have been attempted but since the close of the war and its attendant readjustments many policies must be modified and new policies formed, and it is believed that the American Farm Bureau Federation with its more than 1,000,000 members, representing not only the very cream of the farming interests of 33 states, but the agricultural colleges, county agents and similar groups of recognized leaders as well, is the logical and proper body to formulate such a declaration of policies and initiate the necessary machinery for putting them into effect.

The farm woman's part in the program will not be neglected. Mrs. J. C. Ketcham of Michigan will take a prominent part in this feature of the convention.

A considerable portion of the time during the convention will be given over to discussion of business matters having to do with the organization, membership, program work and general administration of the affairs of the federation. Since only a single year has elapsed since the original meeting of the federation was held, it is expected that several important amendments to the constitution will be adopted.

The new packing house of the Grand View Heights Citrus Association of Tulare County has all equipment in readiness for its first season's run on Navel oranges. The management expects to handle 100 carloads.

RICE IRRIGATION

Rice growers who may be able to dispose of their 1920 crop and be in position to grow another crop in 1921 will find interest and information in "Rice Irrigation Measurements" by Frank Adams. It is Bulletin 225 of the experiment station of the college of agriculture and may be had by writing the station at Berkeley.

In 43 full season measurements of the amount of water used in rice irrigation in Sacramento Valley, 1914 to 1918, the total depth of water applied ranged from 3.91 to 18.70 feet, and the net depth, after deducting measured or estimated waste, ranged from 3.91 to 13.43 feet.

In 32 full season observations on clay and clay adobes of the Willows, Sacramento, Stockton and Capay series the total depth of water applied ranged from 3.91 to 10.09 feet, the net depth from 3.91 to 9.11 feet, and the average depth from 3.94 to 5.72 feet.

The average net depth of water applied to 22,404 acres embraced in the 43 full season observations mentioned was 4.89 feet. Of this area 21,419 acres was clay or clay adobe of the Willows, Sacramento, Stockton or Capay series.

A four year record of use on 39.5 acres of Stockton clay adobe near Biggs, well prepared and well irrigated, showed a range in depth of water applied of 4.27 to 4.87 feet and an average of 4.53 feet.

An annual depth of 5 feet of irrigation water for rice is sufficient for the principal rice soils of Sacramento Valley, viz: for the clays and clay adobes of the Willows, Stockton, Sacramento, Capay and Yolo series. Pervious loam soils require an excessive amount of irrigation water and from a water

standpoint are not suitable for rice growing.

The use on individual fields of one cubic foot per second of irrigation water to 30 to 40 acres during the first flooding after seeding is not excessive. Owing to the fact that all growers are not ready for the first flooding at the same time, canal diversions at this rate are not necessary, although probably as much as one cubic foot per second to about each 50 acres served is desirable during the period of initial flooding. The seasonal use averages about 65 acres per cubic foot per second.

About one-third of the water applied to rice fields is lost by evaporation from the surface of the standing water during submergence. This factor in the duty of water cannot be controlled.

A six year series of experiments at Biggs, duplicated for two years near Norman, generally show maximum rice yields from submerging rice fields six inches deep beginning 30 days after emergence of the plants above ground. An exception to this was found on the alkali soils in the Norman plots, from which the best yields were obtained from submergence beginning 15 days after emergence.

The advantage from submerging rice fields six inches deep beginning 30 days after emergence on all but alkali land, when compared with the results from submerging to a less or greater depth or beginning submergence earlier or later after emergence of the plants, may not average sufficient to offset the difference in cost of irrigation by the different methods.

Constant movement of irrigation water through the rice checks during the period of submergence is necessary only where the soil contains alkali in sufficient quantities to affect the plants.

Keeping rice fields only moist or "muddy" throughout the growing season gives reduced yields of poor quality.

Fluctuating depth of submergence may prove beneficial in rice irrigation, but experiments to date have not fully demonstrated this for California conditions.

It is imperative that ground water and rise of alkali be controlled in California rice fields both by confining rice growing to the heavier, impervious clays and clay adobes, and by thorough and adequate drainage facilities embracing the entire areas affected or likely to be affected.

A prime factor in control of water grass in rice fields is the keeping of banks of canals and ditches, principally lateral and field ditches, entirely free of this pest by pulling, cutting or pasturing before the seed is formed. An almost equally important factor is the keeping of drains and sloughs free of both water grass and tules.

LOSSES CAUSED BY RATS

Entomologists of the department of agriculture of the University of Minnesota say that Minnesota's financial loss from the depredations of rats is from \$10,000,000 to \$12,000,000 annually. State directors of agricultural extension work have estimated the losses in Montana at from \$15,000,000 to \$20,000,000; in North Dakota at \$6,000,000 or more; in Kansas \$12,000,000; in California \$20,000,000 and in Wyoming and Nevada at from 10 to 15 per cent of the value of all crops.

In addition to this monumental loss of food products, rats spread disease, and efforts are being made by our state and city boards of health to reduce the number of these dangerous and destructive animals.

THE MULLET FISHERIES OF THE SALTON SEA

Developing a profitable fishing industry and marketing ocean food fish from a brine pickled pool of constantly varying salinity and water levels, far below the level of the oceans and in the midst of a blazing desert, is an accomplishment of man that is worthy of attention. This newest of American fisheries, which has recently commanded the attention of both state and federal scientists, is in the Salton Sea of Southern California, where the industry has grown up under some of the most adverse and ex-

traordinary conditions existing in any
fishing enterprise.

The Salton Sea is one of the most
mysterious of all the world's inland
brine pools. With its surface at this
writing 257 feet below ocean level, and
its waters at times approaching six-
fold the salinity of sea water, it has
often been termed the Dead Sea of
America. It is the lowest body of
water on the face of the western
hemisphere and the lowest on earth
with the exception of the Dead Sea
of Palestine.

Little is known of the fish life of
the Salton Sea prior to the last break
in the Colorado River dykes. It is de-
finitely known, however, that at the
time the sea was something like six
times as salty as ocean water, and this
fact alone would have precluded the
possibility of fish living in its waters.
In 1905 the river overflowed its banks,
cutting two channels to the Salton
Sea which are now known as the New
and Alamo Rivers. The flood carried
160,000,000 cubic feet of water which
it emptied into the Salton Sea, fresh-
ening the water, raising its level and
greatly extending its area.

Several years after the flooding of
the Salton Sea the salt water mullet,
a desirable food fish of the identical
species found in the Gulf of California
and other Pacific waters from Mon-
terey southward, made its appearance
in the sea. Two theories are advanced
by scientists to account for the occur-
rence of the fish. The first is that
they had swum from the Gulf of Cali-
fornia into the fresh waters of the
Colorado River, and were carried down
into the Salton Sea by the flood. This
theory however does not seem ac-
ceptable inasmuch as the fishermen
declare there is no authentic record
of the salt water mullet swimming up
into the fresh water of streams. The
second theory, and the more plausible
one, is that the Salton Sea was stocked
with fish by the white pelicans. These
great birds inhabit the sea by tens of
thousands, rearing their young on the
several volcanic islands and making
daily excursions to the Gulf of Cali-
fornia for their food. Isolated moun-
tain lakes are known to have been
thus stocked with trout, and probably
the fish of the Salton Sea were car-
ried there in the same manner.

In a short time a considerable col-
ony of fishermen began to appear on
the shores of the Salton Sea. Experi-
ments by several large packing plants
at Los Angeles with the canning of
mullet also met with a high degree of
success. Due to the terrific summer
heat of the Salton basin, the tempera-
tures often going as high as 125 de-
grees, the fish are iced aboard the
fishing boats as soon as they are taken
from the water. The fishermen work
in canony tonned boats and in the
water as much as possible, for the pur-
pose of keeping cool. The fish are
landed on Mullet Island, where the
receding of the sea has made possible
the building of a motor road connect-
ing it with the land. They are then
trucked to Niland on the Southern Pa-
cific line for shipment to the canning
plants and markets.

Just what the future of the Salton
Sea fishing industry will be no one
can say until an accurate water sur-
vey and analysis of the water is made
from samples taken from various por-
tions of the lake and extending over
a period of years. At present the sea
has a maximum depth of about 45 feet
and it is already well known that the
salinity varies at different depths as
well as in different localities, accord-
ing to the distance from sources of
fresh water supply. If the Salton Sea
should ever again attain the degree of
salinity that it possessed prior to the
flood of 1905, it is probable that the
fishing industry would be automatical-
ly terminated by the perishing of the
fish. The fishermen and old residents
about the sea, however, scoff at the
idea that the sea will ever go dry, or
even recede to the point of increasing
salinity beyond the endurance of the
fish. They believe that the water is
now holding its own against evapora-
tion losses. Last year the sea receded
four and one-half feet and then, with-
out any apparent reason, rose again
two feet. With the constantly increas-
ing irrigated area of the Imperial Val-
ley and the development of additional
irrigation projects along the Colorado
River, an ever increasing volume of
overflow water will be drained into
the Salton Sea to freshen its waters
and maintain its level.—John Edwin
Hogg in Popular Mechanics.

The **FRUIT GROWER** says—
"for tree planting
genuine **GIANT** is
most satisfactory"

The Giant Farm Powders—Eureka Stumping and Giant
Stumping—loosen and pulverize the soil instead of packing it
and throwing it high in the air.

Western fruit growers have used hundreds of tons of these
Giant Powders for blasting beds for trees. They have proved
that blasting with genuine Giant Powders provides free
drainage, increases moisture-storage capacity and insures
vigorous growth and early bearing.

"My trees planted three years ago in beds blasted with Giant
Powder are 75 to 100 per cent bigger and better than the
trees that I planted in dug holes," writes H. H. Smith,
Oregon City.

You will enjoy reading "Better Farming with Giant Farm Powders." It de-
scribes all the new and money-saving methods of blasting beds for trees, sub-
soiling established groves and orchards, clearing land, ditching, etc. Write
for it now.

The Brant Rancho at Owensmouth is anticipating a class leadership on the record now being made by the senior two year old Guernsey, Rose of the Rancho, who is going at the rate of 710 pounds of butter fat for the year, with only a few days more to go.

R. A. Chapman of San Diego has received the Poland China boar pig, Renowned Liberator, which he bought in the Maple Way Farm sale. This youngster, being by Liberator, is a half-brother to this year's grand champion of the National Swine Show.

The Italian Vineyard Co. has purchased all the breeding herd of Berkshires of the Sandercock Land Company of Sacramento.

At the Diamond Bar Ranch at Spadra it has always been the opinion that lousy hogs cannot put on pork as cheaply as clean ones, and in order to combat the parasites concrete wallows which are kept filled with a solution of water and sheep dip are in all the large pens. Since this method has been adopted there has not been a lousy hog on the place.

The wisdom of keeping hogs clean has been clearly shown by some recent tests made by the United States department of agriculture. Three experiments, each covering a period of three months or more, were conducted, and from 20 to 30 hogs were used in each. In one experiment it cost \$1 a hundred pounds of pork more to feed the hogs that had lice than it did those that were free from parasites. In another, the cost was \$1.50 more, and in the third \$2.94 more,

and the hogs that did not have lice weighed 3,150 pounds, although the total amount of feed consumed by the latter group weighed only 203 pounds more than that consumed by the animals that had lice.

Announcement has just been made that Owen Duffy, manager of the Napa state farm, has purchased the aged Hereford bull, Beau Rosemont, from Chas. Rule, Duncan's Mills. Beau Rosemont was sired by Dictator Fair-

A Remarkable Litter of Spring Pigs

This litter of Durocs by the Ace of Pathfinders, and shown by the Diamond Bar Ranch, won 1st young herd, 1st breeder's young herd and 1st produce of dam at Sacramento, Los Angeles and Riverside as well as the futurity prizes at all three shows. The individuals were also prize winners in their classes.

showing that the hogs with lice consume more protein feed and that they cannot make up for the blood sucked by the parasites. Fifteen hogs with lice weighed a total of 1,167 pounds at the beginning of the experiment, and 15 hogs without lice weighed 1,025 pounds. At the end of the experiment the lousy hogs weighed 2,872 pounds

and was purchased by Mr. Rule in 1917 after he had been shown successfully by Col. E. H. Taylor of Kentucky. As a two year old he was first in class and senior champion at Des Moines, where he defeated the noted \$31,000 Ardmore; senior champion at Indiana and Illinois; first in class at Misouri, the American Royal

and Texas; fourth at Chicago. At the last California state fair he was first in the class for aged bulls.

A meeting of the California Holstein Breeders Association was held at Sacramento the evening of November 10. Announcement was made that the Holstein had been selected as the official dairy cattle breed to be raised by the settlers on the Delhi colony. Plans were discussed for developing the Australian market and extending the influence of the breed generally. At the meeting it was decided to accept members from Nevada. Following the meeting a smoker was given by Messrs. Lewis and Hill, owners of the Toyon Farm Association.

In a recent letter from Professor Gordon H. True, who is at present in the Hawaiian Islands, he says: "California livestock breeders will be interested to know that at the recent Maui County fair California bred livestock gave a splendid account of themselves. Joe Dulcinia, the Hereford bull that Mr. Rice purchased last fall from W. J. Bemmerly of Woodland, was made champion over a number of high class bulls. An Ayrshire cow from McFarland's Steybrae herd at San Mateo was champion for that breed. A Napa state hospital cow and a Morris bred bull were the Holstein champions. A Berkshire boar bred at the university farm was champion of his breed."

G. Ellinwood Finnell, one of the owners of the Finnell Stock Farm, Galt, reports that they have just purchased an aged Hereford bull to place at the head of their herd. The bull is a ten year old son of the noted sire, Domino, and is out of a richly bred Anxiety dam. He was purchased from a Kansas breeder and it is stated that he has proven himself a most prepotent sire.

At a meeting of the California Shorthorn Breeders Association held at San Francisco, November 10, Senator Benj. F. Rush of Suisun was elected president and a new board of directors set up. The association is making plans to engage the services of a fieldman to look after the development and promotion of the breed in this territory, and it is expected that an early announcement will be made of their selection. Plans were made for holding a consignment sale early next spring.

C. N. Hawkins of the Pacheco Cattle Company, Hollister, reports that their show herd of Shorthorns that is now making the Northwest circuit is meeting with marked success. At Lewiston their senior yearling heifer, White Pacheco, won her class and their senior heifer calf, Sultan's Dale, was junior champion. They also were first on their young herd and calf herd. At the Spokane show the Pacheco colors were out in front in the same order except that the calf herd was second.

Howard Vaughn, who has recently moved to this state from Iowa, has purchased a ranch just north of Dixon and is making his plans to establish a herd of Shorthorns. Vaughn was a well known breeder of Shorthorn cattle and Chester White hogs in Iowa.

CARE OF DAIRY UTENSILS

Last week a dairyman asked my opinion of a milk cooler he had recently purchased from another dairyman who had not had occasion to use it for some time. He told me that his friend had purchased it new less than a year ago. Examination showed that the cooler was badly corroded and would not be fit for use until it had been retinned. Such occurrences are not rare. Dairy machinery and utensils often are left to rust and corrode so that when they are needed they are not fit to use.

A cooler or separator bowl that is not going to be used for a while should be washed and dried, then thoroughly coated with grease, wrapped in paper and stored in a dry place. The interior of cheese yats, pasteurizers, etc., likewise should be coated with grease and covered to exclude dust. Milk cans and buckets should not be used for boiling water or handling waste skim milk. A little care in these matters will avoid considerable loss, as

FOURTH TULARE SALE

70 Registered Holsteins 70

67 Females---3 Bulls

Sales Pavilion, Tulare, Cal. Thursday, December 2, 1920

This offering includes a large number of young cows and heifers of more than ordinary merit, and made doubly attractive by the services of the great sires which they carry, these bulls including both short and long time record breeding. In the list will be found:

A SPLENDID COW that has just completed a yearly record of 745 lbs. butter from 17,087 lbs. milk. She sells heavy with calf to a 32 lb. son of King Mead of Riverside.

A 24 POUND daughter of Colantha Sir Pontiac Aaggie that has just finished a yearly record of 653.2 lbs. butter. Due to calve on December 7 to a 32 lb. son of King Mead of Riverside.

A DAUGHTER of a 646 lb. yearly record 2 year old. Dam now on test again and making nice record as a 3 year old.

A 3 YEAR OLD that has just completed a yearly record of 640.6 lbs. butter. She sells heavy with calf to a 32 lb. son of King Mead of Riverside.

A 21 POUND granddaughter of King of the Pontiacs, now fresh.

A 19 POUND 3 YEAR OLD, bred to a 32 lb. son of King Mead of Riverside.

A DAUGHTER OF KING KORNDYKE SADIE VALE, out of a 23 lb. 4 year old granddaughter of Pontiac Korndyke.

FOUR YOUNG COWS bred to a 31 lb. son of Sir Veeman Korndyke Pontiac, whose first daughters to freshen are making splendid records.

A 26 POUND daughter of a 28 pound cow, bred to Prince Gelsche Walker Alcartra, who is by Prince Gelsche Walker and out of a half sister to Tilly Alcartra that made 796.16 lbs. butter from 19,043.5 lbs. milk in one year.

TWO DAUGHTERS of Prince Gelsche Walker Alcartra out of well bred dams.

A DAUGHTER of Creamcup Colantha Pontiac Burke, heavy with calf to Sir Aaggie De Kol Acme 2nd, five of whose seven nearest dams average 1,153 lbs. butter in one year.

A DAUGHTER of the 35 lb. sire Segis Pontiac Abbekerk.

A DAUGHTER of Segis Pontiac Crane De Kol, heavy with calf to Segis Pontiac Abbekerk.

A SHOW HEIFER, sired by a proven son of Segis Pontiac De Kol Burke.

A 2 YEAR OLD daughter of Sir Aaggie De Kol Acme, now on yearly test and bred to the 34 lb. bull Sir Aaggie Hiske Walker.

A GRANDDAUGHTER of an 811 lb. yearly record cow bred to Palo Humphrey Meka, son of the 1,326 lb. yearly record cow Laurameka.

AN 18 POUND 3 YEAR OLD bred to Palo Humphrey Meka.

A 2 YEAR OLD with 519.3 lbs. butter in 305 days, her dam a 23 lb. 2 year old.

TWO GRANDDAUGHTERS of King Korndyke Sadie Vale, bred to a 31 lb. grandson of Pontiac Clothilde De Kol 2nd.

A DAUGHTER of a cow that made 1,093.04 lbs. butter from 27,179 lbs. milk in one year.

A GRANDDAUGHTER of King Segis Pontiac Count, out of a 21 lb. dam and heavy with calf to a 36 lb. son of the three times grand champion King Segis Alcartra Prilly.

A 21 POUND COW that has milked over 100 lbs. per day many different times.

A 2 YEAR OLD daughter of the above cow, with 18.49 lbs. butter in 7 days at 2 years 3 months. She is by a son of King Segis Pontiac Count and sells heavy with calf to a 36 lb. son of King Segis Alcartra Prilly.

ANOTHER DAUGHTER of the same cow, sired by a son of King Walker and due to freshen shortly after sale to a son of King Segis Pontiac Count.

A HEIFER sired by a 950 lb. yearly record grandson of Aralia De Kol. Will be fresh with first calf before sale.

MANY OTHER WELL BRED FEMALES, by great sires, out of good dams, and bred to some of California's best bulls.

Only Three Bulls in the Offering

A son of the 41 lb. \$5,000 bull King Abbekerk Johanna Segis, out of a 29.42 lb. daughter of Spring Farm King Pontiac 6th. The dam and sire's dam average 35.21 lbs. butter in 7 days. Here is a herd header.

A son of Creamcup Fldessa Cornucopia Lad whose dam made 897 lbs. butter from over 22,750 lbs. milk in one year. The dam of this youngster is now on yearly test and making a good record.

A son of the 35 lb. bull Segis Pontiac Abbekerk, out of an A. R. O. granddaughter of King Pontiac Ruby Burke.

milk cans that are rusty, or coolers and separators that are corroded, can not rightly be used for handling milk and cream.—M. E. Coulter.

SILAGE FOR FATTENING BEEF CATTLE

Highly satisfactory beef can be produced from two year old steers by feeding the corn as silage, together with linseed meal and clover or alfalfa hay, instead of full feeding on shelled or ear corn.

The price of feed and the premium on heavily fat cattle during the past five years have not warranted full feeding over long periods when cattle which are two years or more of age are used.

One acre, yielding 40 bushels of corn, or eight tons of silage, if fed as silage, together with 1,733 pounds of linseed oil meal and 1,810 pounds of alfalfa hay, would prepare for market 2.8 steers, or would produce under the foregoing circumstances 756.8 pounds of beef and 11.3 pounds of pork as compared with 0.87 steers prepared for market by an acre of corn, fed as shelled corn (full feed) and silage, together with 308.2 pounds of linseed meal and 345.2 pounds of alfalfa hay, or which produced 291.6 pounds of beef and 68.5 pounds of pork.

Pork produced behind cattle eating a ration of corn silage, linseed meal and hay is a negligible quantity.

It is possible to change cattle from corn silage to dry feed, but the increased cost of gains frequently makes it inadvisable.

A ration of corn silage and alfalfa hay produced a gain of 2 1/4 pounds per day for the first 60 days of a feeding period, on two year old cattle.

A ration of corn silage, alfalfa hay and linseed meal with the past five years' prices produced gains at about two-thirds to three-fourths of the cost per pound of the cost when full fed on shelled or ear corn.

The extensive use of silage without shelled or ear corn involves the investment of less capital in feed, decreases the cost of gains and the necessary margin, reduces the hazard of cattle feeding, permits of a larger volume of business and enables the average farmer to participate in the enterprise. It does not produce such a high finish nor such large gains.—Missouri Agricultural College.

SIRE AND DAM RATIOS

Developments in the "Better Sires—Better Stock" campaign have resulted in figures showing the relative number of males and females kept for breeding purposes. Following are the ratios based on more than 200,000 head of stock of all kinds listed with the United States department of agriculture:

Cattle, one bull to 18.9 cows; horses, one stallion to 16.9 mares; swine, one boar to 11.5 sows; sheep, one ram to 37 ewes; goats, one buck to 26.6 does; poultry, one rooster to 23.3 hens; other poultry, geese, ducks, turkeys, etc. (average), one male to 8.5 females.

These figures represent conditions on more than 2,000 farms in various parts of the country and are believed to be typical of other farms. They show the importance of placing stress on quality in sires, since in practically all cases a sire is the parent of a very much larger number of offspring than the average female animal.

REPORT OF DAIRY COW COMPETITION

By Prof. F. W. Woll

Our records show that the following groups of five grade cows in a herd entered in the state dairy cow competition made the average production of butter fat given during the months of September and October, 1920, viz.:

September, 1920—Chas. F. Holman, Stockton, 71.05 pounds; C. E. Fisher, Hughson, 64.46; F. F. Pellissier, Whittier, 62.18; D. Buzzini, Crescent City, 63.04; Albert Burger, El Centro, 50.52.

October, 1920—Earl Graham, Compton, 83.26 pounds; J. D. Hoffman, Pasadena, 77.46; F. F. Pellissier, Whittier, 71.12; C. E. Fisher, Hughson, 60.85; Albert Burger, El Centro, 58.72; D. Buzzini, Crescent City, 48.82.

The two leading groups of cows for the two months were owned by Charles F. Holman and Earl Graham. They are, therefore, entitled to the California Cultivator prizes for the months of September and October.

The production of individual cows in each of the high producing groups is given below. All the cows included were grade Holsteins, except Rose, which is a grade Shorthorn cow.

Grades owned by C. F. Holman, Stockton:

Name	Lbs. Milk	Butter Fat		Credit
		Pct.	Lbs.	
No. 81	1,293	4.3	55.599	63.94
No. 57	1,311	6.5	85.215	85.22
No. 18	1,116	6.9	77.004	77.00
No. 54	1,278	5.8	74.124	74.12
No. 55	1,485	3.7	54.945	54.95

Average credit—pounds, 71.05.

(No. 81 was allowed handicap for cows below full age.)

Grades owned by Earl Graham, Compton:

Name	Lbs. Milk	Butter Fat		Credit
		Pct.	Lbs.	
Maud	2,468	3.1	76.500	76.50
Rose	2,099	5.4	113.300	113.30
Whittier	2,099	3.9	81.900	81.90
Spencer	1,861	4.1	76.300	76.30
Colantha	1,265	5.4	68.300	68.30

Average credit—pounds, 83.26.

SOPHIE 19TH A WONDER

As a rule a 15 year old cow is not considered of much value as a milk producer. Sentiment may permit a hitherto profitable milk producer to linger on the farm and receive kind treatment as a reward for good services. Not so with Sophie 19th of Hood Farm, Lowell, Massachusetts. At the age of 15 years and nine months she has broken her ninth official world's record for butter production. The totals of her nine records are 110,918 pounds of milk and 6,353 pounds of

butter fat. Her record for last year was 10,918 pounds of milk and 566 pounds of butter fat. The owner, Mr. Hood, apparently is not amazed at this wonderful record. He simply states that the cow has always been given the best of care.

Veterinary

Mouth Swells

Mare's nose and all about her mouth puffs up to almost double, every once in a while, in fact of late it is so much of the time. This has been going on since in early summer. At first we thought of snake bite. She had a colt in April, and though we have fed her right along she is extremely thin. We took the colt away from her in August. She eats well and seems well. She runs out on pasture and we feed her both grain and hay and alfalfa. She is about 12 years old.—Subscriber.

The trouble you mention is a very difficult one to diagnose. It is impossible with the information given to recommend any treatment that is sure to give satisfaction. I believe the best suggestion I can make at this time is that you employ the services of a competent veterinarian to examine the animal and prescribe treatment.—G. E. G.

Westlawn Farms Owned By H. E. Vogel **Fresno, Cal.**

Mr. H. E. Vogel is making an offering in this sale of which any breeder might well be proud, and the opportunity presented for purchase of high class individuals is one which should command widespread attention.

The entire milking herd at Westlawn Farms will be dispersed in this sale, and a number of high class bred heifers and a limited number of good bulls will complete the sale list.

In a previous announcement in this paper we outlined the breeding of the four great sires to which the females in this sale are bred, and present here a brief description of a few of these richly bred females:

- BETSY LAMB PRILLY, 35.03 lbs. butter in 7 days from 743.3 lbs. milk. She also made over 31 lbs. butter in 7 days as a 4 year old and was Grand Champion cow at San Francisco in 1919. She is due to calve in January to King Aralia Mead, an 1,161 lb. son of King Mead of Riverside.
- A DAUGHTER OF KING MEAD OF RIVERSIDE, out of a daughter of Ignaro De Kol that made 762.73 lbs. butter from 18,424.6 lbs. milk in one year.
- A 22 POUND GRANDDAUGHTER OF ARAIA DE KOL with 717 lbs. butter in one year as a 3 year old, her dam a 954 lb. daughter of the 1,085 lb. former world's record milk cow Riverside Sadie De Kol Burke. Her three nearest dams average 1,061 lbs. butter in one year.
- A 21 POUND DAUGHTER OF PRINCE GELSCH WALKER, out of De Kol of Valley Mead 3d, 845.11 lbs. butter in one year.
- A YEARLING DAUGHTER OF THE ABOVE COW sired by Sir Aagie De Kol Mead, son of Sir Aagie De Kol Acme and Miss Valley Mead De Kol Walker. HERE IS A REAL STAR!
- A DAUGHTER OF COLANTHA ALCARTRA FAYNE, 33 lb. grandson of Colantha Johanna Lad, with 25.68 lbs. butter in 7 days as a junior 3 year old.
- A 28.36 POUND DAUGHTER of Dutchland Hengerveld Sir Gladi, in calf to a son of Betsy Lamb Prilly.
- A GRANDDAUGHTER OF KING OF THE PONTIACS, with 21.38 lbs. butter in 7 days as a senior 4 year old. Sells heavy with calf to King Aralia Mead.
- A 17 POUND 2 YEAR OLD daughter of King Morco Alcartra, bred to King Aralia Mead.
- A 24 POUND SENIOR 3 YEAR OLD granddaughter of Juliana King of Riverside, now on yearly test with 191.47 lbs. butter to her credit in 60 days.
- A 24 POUND GRANDDAUGHTER of Juliana King of Riverside, now on yearly test, and well along with calf to King Aralia Mead.
- A 22 POUND COW due in December to a son of Betsy Lamb Prilly.
- A 21.73 POUND JUNIOR 4 YEAR OLD daughter of the 30 lb. bull Admiral Burke.
- A 15.87 POUND 2 YEAR OLD daughter of above cow, well along with calf to a son of Betsy Lamb Prilly.
- A 24.23 POUND GRANDDAUGHTER OF JULIANA KING OF RIVERSIDE, now on yearly test, and well along with calf to a son of Betsy Lamb Prilly.
- A 23 POUND COW, heavy with calf to King Aralia Mead.
- A GREAT COW with a record of 25.11 lbs. butter in 7 days as a senior 2 year old. Will be fresh at sale time.
- A 22 POUND COW out of a half sister to Juliana De Kol, and bred to a son of Betsy Lamb Prilly.
- AN 18.29 POUND 2 YEAR OLD, heavy with calf to a son of Betsy Lamb Prilly.
- A 17.40 POUND 2 YEAR OLD, heavy with calf to a son of Betsy Lamb Prilly.
- A LARGE NUMBER OF OTHER COWS AND HEIFERS with good records, out of well bred, high record dams, and bred to one or the other of the richly bred Westlawn Farms herd sires.

A Limited Number of Young Bulls

KING PRILLY MEAD, out of the great producer and show cow Betsy Lamb Prilly, 30.03 lbs. butter from 743.3 lbs. milk in 7 days, and sired by King Aralia Mead, an 1,161 lb. son of King Mead of Riverside. Here is a real herd bull for some breeder.

A SON OF A 25.68 POUND 3 YEAR OLD, sired by a son of Betsy Lamb Prilly.
A SON OF KING ARAIA MEAD out of a 24 lb. granddaughter of Juliana King of Riverside now on yearly test.
TWO OTHER WELL BRED YOUNG BULLS, both out of dams with good records.

This is positively one of the best offerings ever made in California. The blood lines of the herd are popular, the records substantial, and we believe that no sale in the west has ever presented cattle of better type throughout.

Every animal positively guaranteed to be a breeder; every animal tuberculin tested and sold subject to retest by the buyer.

Big Type Poland Chinas at Auction

On account of changing my location, I am offering 60 head of Polands at public auction, at

Orland, Cal., Wednesday, Dec. 15th, 1920

The offering includes 30 spring gilts, 10 fall gilts, 10 tried sows and 10 young boars sired by Long Jumbo, Glenn Chief, Yates Big Orphan, Young Hadley and bred to Yates Big Jones, Y. C. 4, Reformer, and Black Bob. Send for catalog.

R. J. Yates

Orland, Cal.

Poland China Pigs for Quick Sale

Weaned pigs, either sex, of September farrow for sale at ten weeks of age for \$25 each. They are sired by The Sequoian, an extremely large yearling boar and one of the best sires in the state. Write at once.

Z. M. Dickey

Dinuba, Cal.

Eastman Ranch Poland Chinas

Herd headed by Buster Bob, Grand Champion at the strong Los Angeles Live Stock Show. He is the largest junior yearling in the state and is siring some great pigs. Young stock for sale at all times. Satisfaction assured.

H. L. Graham, Mgr.

San Fernando, Cal.

Victory Bob, the Greatest Son

of the grand champion Giant Bob heads the Sunland herd of big type Poland Chinas. Some choice young animals of select breeding for sale at all times.

H. A. Johansen

Fresno, Cal.

Poland China Boars Ready For Service

One October yearling out of Liberty Girl, grand champion sow at Sacramento. Two March boars sired by Long Big Bone Jr. out of the 1919 reserve champion sow. These pigs were from the 3rd prize litter at Sacramento. One by The Westerner out of the 3rd prize junior yearling sow. These boars are real tops and are priced low enough for any one. Write at once. Satisfaction assured.

Alex. D. McCarty

Route C, Modesto, Cal.

King's Big Bone Leader

A Grand Champion and the sire of a Grand Champion heads my herd of high class sows. He has sired a high class of pigs. I will sell 35 head of selected sows at public auction in January. Write for prices and information.

Les McCracken

Ripon, Cal.

Trehwhitt's Big Type Polands

Are the result of careful mating and selection. Size and feeding quality have always been essential features in this herd. Write for prices and information. I can interest you.

The Cattle Shortage

By A. L. Spellmeyer

IN the association meeting recently at Los Angeles some of the prominent speakers advised us that there was a cattle shortage, but did not give the facts pertaining to it, and at least one prominent speaker did not believe there was a shortage, but rather plenty of cattle.

It may interest readers to have certain facts which the department of agriculture has assembled, the report of John Roberts of the bureau of animal industry being especially interesting. It may be well to mention that my number of estimates made at various times were figured on a conservative basis which would admit of no dispute, and that the government figures indicate a far more serious condition of shortage than most of us had realized existed. The 1919 slaughter: Cattle, federal inspected, 1,089,984; other slaughter, 3,545,100. Calves, federal inspected, 3,969,019; other slaughter, 5,072,000. Total cattle and calves killed for food in the United States, 1919, 22,676,103. We find also that the average live weight of cattle killed was 924.8 pounds and the average dressed weight 494.8 pounds, or 53.51 per cent. We find that calves dressed 61.16 per cent of the average weight killed, or 94.1 pounds from the live weight of 154 pounds.

The 1919 total beef production is estimated at 6,571,000,000 pounds, veal 851,000,000 pounds. The per capita beef consumed is 59 pounds, veal eight pounds.

It is interesting to note the steady decline in weight of animals killed, showing that younger cattle are being killed for meat. Also the enormous number of calves killed in 1919 as compared to 1914, in fact, about double.

In 1914 1,696,962 federal inspected calves were killed, 2,964,400 other calves were killed, making total of 4,661,362. In 1919 the total slaughter was 9,041,000 calves, about 4,000,000 federal inspection and over 5,000,000 outside.

In weight the veal slaughter of 851,000,000 pounds for 1919 compares to 626,000,000 pounds for 1907 and 433,000,000 pounds for 1914.

It is worthy of note the per capita meat consumed was in 1919 the lowest of any year since 1907, with the exception of 1914, 1915, 1917. Per capita all meats consumed: 1907, 167.4 pounds; 1914, 140.7; 1915, 137; 1916, 143.7; 1917, 130 (meatless days); 1918, 150.1; 1919, 142.

In 1907 we supposed we had 51,566,000 beef type cattle and 20,968,000 dairy cattle. The 1910 census gives 41,178,434 beef type cattle or almost 6,000,000 less than government estimate.

In 1919, or January 1, 1920, we are supposed to have had 44,485,000 beef type cattle and 23,747,000 dairy cattle, or 68,000,000 cattle to stand a slaughter of 22,000,000. In my opinion we had millions more in 1907 than estimated by the government and in 1920 we have several million less, if all states check like certain Southwestern states in relation to government estimates. The fact is we are using about the same amount of beef as the average period since 1907, more veal, about the same mutton tonnage and more pork. While per capita consumed has fallen, tonnage of all meats eaten has increased over a billion pounds since 1914, due to population increase, probably.

Sheep have decreased since 1907 some 5,000,000 head, 1,000,000 of it since 1914. Swine up to and including the year 1918 showed a great increase, but since 1918 have declined.

The maximum was reached with 74,000,000 plus of swine January 1, 1919, but the following year showed a decline of almost a million head and the probable figures for the present year will show a decline of several million additional owing to the high costs of grains and low return for pork causing men to quit that business as they have quit cattle feeding and cattle raising.

Exportation of meat is again picking up. Foreign beef and mutton prices are high and with the exception of Argentine far higher than growers are receiving in this country. Even in

Australia where range is almost a gift and fattening done at low cost on grass, beef prices are 9.25 per hundred weight, or about \$8 per steer over average Los Angeles price for last six months. Cows in Australia up to \$125. Cows in Arizona sold last week at \$40.

Still this country is exporting meat to Europe. Dressed Scotch beef in England is selling at 38 cents. The robbery and pillage of the great cattle industry, following years of drouth, have cut into steer supply, and the present kill in all districts consists of large numbers of cows and of veal calves which should be reserved for the replenishment of depleted breeding stock supply. We have within the last 30 days heard the two czars of the meat industry. Both state that cattle prices will be better. Feeders throughout the country don't believe in them enough to take any chance, as the cattle scarcity in all feeding centers shows plainly. Los Angeles will have no shortage before 1921 unless the meat barons desire to cause it, and cattle price won't raise if those meat barons oppose it, until after the coming March, 1921.

It doesn't take any wisdom to understand that 68,000,000 cattle can't stand a 22,000,000 slaughter and not fall behind. We fell behind millions of cattle with less slaughter, and it will take us six years to grow a mature steer from a calf, so that sometime the cow will again be worth the price.

ELUSIVE SCAB MITE CAPTURED

An interesting report on sheep scab inspection has been received from Dr. R. E. Duckworth, state veterinary inspector.

The owner of a band of sheep near Fairfield, desiring to take the necessary precautions against the spread of scab, dipped his bucks about six weeks ago before turning them in with the ewes. A few days ago while Dr. Duckworth was making an inspection of the band there was no evidence of scab found on any of the ewes. One buck looked slightly suspicious and after much trouble and a long drive was caught. A very careful examination revealed the scab mite. None of the bucks showed signs of irritation by the mites even after they had been driven fast for a considerable distance. An incident of this kind brings very forcibly to mind the necessity of insisting on the corralling of sheep for careful inspection, no matter how much time or trouble is spent. This is one instance when a casual inspection might have caused such a mild infestation to be overlooked.

HELP A GOOD DAIRYMAN TO STAY IN BUSINESS

Milk is a perfect food. It contains protein the equivalent of meat, but in more digestible form; sugar; fat; mineral salts or ash; water, and is rich in vitamins, the very necessary growth stimulating substance for children. It is a food that must be had.

Consumers are everywhere complaining of increasing difficulty in getting milk, while dairymen are quitting the business in ever increasing numbers. Ask them the reason: Feed is high, milk is not; it is very hard, confining work and, worst of all, they are not making a reasonable wage from it in consideration of living costs and of wages paid for much more desirable work of half as many hours in some other line. If someone suggests a rise in the price of milk, such a howl arises that it threatens that person's standing in the community. Furthermore, the same customers who are begging the dairymen for milk when feed is scarce and all but the best cows are dry, will quit a dairyman who has striven faithfully to serve them through the pinch and buy milk from a neighbor while the grass is green and there is some hope of a small profit from the business. All this injustice, for such it certainly is, is committed in spite of the fact that most dairymen are running a clean, sanitary dairy in strict conformance with the dairy law, while "neighbor's cow dairies" are not all operated upon a legitimate basis.

The solution: Apply the golden rule. Give your dairyman a reason-

Warranted to Give Satisfaction Gombault's Caustic Balsam

Has Imitators But No Competitors

A Safe, Speedy, Positive Remedy for

Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs and Lameness from Spavin, Ringbone and other bony tumors. Cures skin diseases or Parasites, Thrush, Diphtheria. Removes Bunches from Horses or Cattle.

As a Human Liniment and Antiseptic for external use it is invaluable.

Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.75 per bottle. Sold by druggists, or sent by parcel post, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address The Lawrence-Williams Co., Cleveland, O.

FEEDING SUNFLOWERS

Experiments with sunflowers show that 36 tons of green fodder were produced on one acre when it was irrigated. When unirrigated, but hoed, one acre produced 22 tons of green fodder. Forty to 90 pounds of the green product were fed to cows daily. About five per cent of the plant was in flower. The results showed a food value almost equal to corn fodder.

The following feeding tests were conducted to more nearly determine the food value of siloed sunflowers:

Seven cows were fed oats, malt, sprouts and bran in the ratio of 5:2:3, and alsike clover hay. Seven other cows were fed for the same period on the same ration with the exception that part of the clover hay was replaced by sunflower. At the expiration of 28 days of such feeding the ration of the same two lots of cows was reversed and the experiment continued 28 days longer. The results showed that the feeding of three and three-fourths pounds of sunflower daily increased the milk and butter yields and resulted in a daily saving of one pound of clover hay. No peculiar taste or smell could be detected in the milk and butter when the sunflower was fed.

THE MUDDY BARNYARD A MENACE

The muddy barnyard season will soon be at hand. During the rainy period it will be next to impossible to improve the condition, so why not now give the problem some serious thought and consideration and have the yards in good trim before the rains appear? Study the course of natural drainage, and if there is a reasonable amount of this great improvement can be made by deepening the ditches or by putting in a system of underground tiling.

If there is no natural drainage and the barnyards are extremely level, it will be necessary to pave a portion of the yard.

Not much profit is made by allowing hogs and cattle to wade belly deep in mud during the rainy season. And, furthermore, filthy yards about the barns are one of the most common causes of the dissemination of diseases among our domestic animals.

NOVEL MILKING SHED FROM THE ANTIPODES

Dr. M. E. McDonald, inspector for the state department of agriculture in the Imperial Valley, reports that William Paine of El Centro has a novel type of milking shed that is arousing the interest of various inspectors and others who have seen it.

Mr. Paine has a herd of some 60 or 70 cows. His milking shed is equipped with a milking machine and consists of only six stalls. The cows enter the stalls and after being milked pass on through doors in the front of the stalls which are released by means of a lever from the rear. Other cows, awaiting their turn, take their places so that there is no loss of time. They are milked by machine directly into pipes which transfer the milk direct to the receiver in the milk house. Mr. Paine has been using this system for some six months or a year and reports that the cows are readily trained to follow each other into the stalls and that he is well pleased with the plan.

While this system is a novelty in this state, it appears that it is by no means a novelty in other countries. Information is that a gentleman of New Zealand devised it some 20 years ago and that now it is in very common use in both Australia and New Zealand. In fact, it is reported that practically all the milking sheds of New Zealand are of this type and that they are adapted both for machine and hand milking. Because of the similarity of conditions there and here it is thought by those who have imported the idea that the plan is suitable for California.

America's Best Duroc- Jerseys

From point of size and quality and show ring records the 1200 head of pure bred Duroc-Jerseys on the big Diamond Bar Ranch are noted throughout the country. They have in their veins the blood of the greatest sires that America has ever produced.

Add This Trio to Your Herd

Boar and two unrelated sows, seven to eight months old, all registered and sired by such famous boars as: Ace of Pathfinders, Mammoth Sensation Jr., Great Pathfinder. Offered now for \$500 for the trio.

Registered spring boars sired by the same boars as mentioned above.

A limited number of registered bred sows may now be had at reasonable prices.

Unregistered pure bred gilts in quantity, (car lots or less). Price \$35.00 a head. Registered boars to go with these gilts at correspondingly low prices.

A guarantee protects you in every instance.

Thirty Buyers Take Toyon Holsteins

Thirty buyers took advantage of the opportunity afforded by the two day dispersal sale of Holsteins sold by the Toyon Farm Association at the state fair grounds, Sacramento, November 10 and 11, and paid \$42,205 for 134 head, an average of \$315. The sale was regarded as entirely satisfactory to the sellers and the buyers seemed well pleased with their purchases. It so happened that rain fell on each day and that fact is known to have kept many prospective buyers away. As it was, it is probable that no sale wherein was offered as large consignment reached as satisfactory termination. A number of new buyers were developed and many of the better lots found their way to established herds.

Gotshall and Magruder of Ripon were the heaviest buyers and took 15 head of the better things, including the two year old, Moxee Lucy, now making a nice semi-official record, for which they paid \$1,000; her dam, Cascade Lucy at \$625; Cascade Queen Juanita, by the same sire as Cascade Fleta Johanna, for \$725. William Dreher of Sacramento made his debut as a buyer and selected 14 head of the top females to be used as a foundation herd. H. J. Long bought 11 head, J. W. Scudder of Escalon paid \$1,000 for the 26.55 pound cow, Snowstorm Ormsby De Kol. Scudder got eight head of females and eight head of the younger bulls. P. M. Shearer of San Jose took 11 head of the younger females. Mrs. B. F. Fox of Modesto selected seven head of the top cows and was the runner up on many of the highest selling lots. The Bridgford Holstein Company, Patterson, bought the third cow to sell for \$1,000, the 19 pound three year old, Countess Mary Mahomet De Kol 2d, with a yearly record of 742.77 pounds butter from 17,850.7 pounds milk.

The bulls catalogued did not sell for their actual values, but they were disposed of at prices that will make money for the buyers.

The sale was made in order to reduce the herds owned by the Toyon Farm Association to fit into the new plans of the owners.

The sale was held under the management of C. L. Hughes of the California Breeders Sales and Pedigree Company, Sacramento. Col. Ben A. Rhoades, assisted by Col. John A. Davis, did the selling.

A list of the principal sales follows:

- 3, Nazli Prilly Fobes, February, 1914, M. L. Dow, Modesto, \$540.

Bargains in Caledonia Shorthorn Sale

The second public sale of Shorthorns from the Caledonia Farms herd that was held at the farms near Sacramento, Friday, November 12, proved a veritable bargain day for the crowd of buyers who attended. Forty-eight head of cows, heifers and bulls made a general average of \$307, which was regarded as at least \$100 below their true value. The failure of the buyers to show greater appreciation was largely due to the money situation that has made credit tight and the fact that there still looms in the minds of the cattlemen the fear of another dry year. The offering as a whole was highly creditable and presented in splendid condition. While the seller did not receive as much as he had a right to expect it is doubtful if any one sale could have done more to start new breeders in the business, and it is certain that those who did buy secured a very valuable lot of breeding material at prices that cannot fail to return them a handsome profit.

Another disappointing feature of the sale was the lack of demand for the bulls. Ten head of extra good young bulls had been catalogued but after the first two had been appraised at values entirely out of line with their worth, and no further interest was manifested in bulls, the balance were withdrawn from sale.

A feature of the sale was the number of new buyers. Almost the entire list of 17 buyers were men who are just entering the Shorthorn ranks—a fact that presages much for the future of the industry.

The top of the sale was reached with the splendid roan Luster cow that sold with a cracking good white bull calf at foot to F. F. Gordon of Suisun for \$950. The second high price, \$575, was paid by Edinger-Johnson Company of Hood for another of the Luster tribe, heavy to the service of Imp. Caledonia.

The heaviest individual buyer of the sale was H. C. Muddox & Son, Sacramento, who selected nine head of cows and heifers. Howard Vaughn, who has recently moved to this state from Iowa, bought five head of females for his herd, which will be maintained on his newly acquired ranch near Dixon. Geo. H. Sawyer of Waterford made his first purchase of five head.

The sale was managed by C. L. Hughes of the California Breeders Sales Company, Sacramento. Col. Ber A. Rhoades of Los Angeles was the auctioneer and he was assisted by Col. John A. Davis of Manteca.

A complete list of the sales follows:

1. Archeress 27th, September, 1914, Howard Vaughn, Dixon, \$425.
2. Lustrous, March, 1912, R. T. McGurk, Stockton, \$375.
3. Archeress 28th, May, 1915, Edinger-Johnston Co., Hood, \$575.
4. Lustrous 2nd and b. c., September, 1915, F. F. Gordon, Suisun, \$950.
5. Pansyanna, January, 1917, R. P. Cornell, Galt, \$400.
7. Souvenir Countess and b. c., March, 1916, H. C. Muddox & Son, Sacramento, \$425.
8. Wondruos Souvenir, December, 1918, Edinger-Johnston Co., \$350.

CATTLEMEN MEET

Following the gathering at Salt Lake of cattlemen of the Western states, December 6, 7 and 8, the California Cattlemen's Association will meet at the Palace Hotel, San Francisco, December 18.

The Southern California Poland China Breeders Association is planning a consignment sale for the San Fernando Valley to be held some time this winter. With such men as Earl Sturgis, H. L. Graham, Tom Edmondson and E. B. Peers in charge, we look for a lively sale. The date will be announced later.

KOW-KARE

70¢ and \$1.40 Sizes

FOR COWS ONLY

KOW-KARE

DAIRY ASSOCIATION CO. LYNDONVILLE, VT.

Exchange Pennies for Dollars

It pays to invest in cow health. The cost of a package of Kow-Kare, the great cow medicine, is measured in cents; the increased milk income from a healthy cow is reckoned in dollars.

Kow-Kare enjoys a quarter-century record of leadership in the prevention and successful treatment of all cow ailments due to weakened digestive or genital organs, such as Barrenness, Retained Afterbirth, Lost Appetite, Scouring, Bunches and Abortion. The Kow-Kare treatment is inexpensive but produces prompt and visible results. One trial will convince you.

Buy Kow-Kare from feed dealers, general stores or druggists.

DAIRY ASSOCIATION CO.
LYNDONVILLE, VT.

NOTE: The Trade-mark name has been changed from KOW-KURE to KOW-KARE—a name more expressive of BOTH the PREVENTIVE and CURATIVE qualities of the remedy. There is not the slightest change in formula or manufacture.

LOS ANGELES COUNTY FARM

Hondo, Cal.

3 miles south of Downey on Downey-Long Beach Boulevard

"Woody" Says:

When Henry reduced Lizzie's selling price, everybody knew the next day. But do you know we are selling lumber at big reductions from the February high levels? For instance: We have good flooring as low as \$50.00 per thousand feet. Good roof sheathing for \$45.00. Our justly famous "WOODROW" sanded roofing for \$2.25 and our "Woody" for \$2.50 per roll. If you do not know how low we are selling good lumber, write, call or wire at once. Our lumber is selling for 20 to 35 per cent less. Now is the time to build.

THANKSGIVING

Let us give thanks at Thanksgiving
That we're singing and laughing and liv-
ing;
Thankful, we say, just to live by the way
In sunlight and starlight that scatter
their ray;
Thankful, indeed, for the rose and the
gleam,
The smile and the song and the beautiful
dream.
Let us give thanks for the glory,
The daily life's wonderful story,
The fields that we know and the hills
where the glow
Of sunlight falls soft and the water brooks
flow;
Thankful, sweetheart, for the joy and the
bliss,
The arms 'round the neck and the love-
laden kiss!

THE GLORIOUS GOBBLER

All hail the glorious gobbler!
When autumn skies are gray
He mounts his china platter throne
And rules Thanksgiving day;
It is a noble oval
With gilded garlands fair,
Or it may be an heirloom prized
Of old blue willow ware.

Salute the glorious gobbler;
(Though sometimes it's a hen
That dawns in appetizing brown
Upon our famished ken).

He wears his festal dressing
Contrariwise, within,
Receiving all his subjects true
In nothing but his skin.

Here's to the glorious gobbler!
Though far afield they roam,
Yet in his honor every year
The children gather home.
His drumsticks bent assembly
From mountain top to sea,
He wears a golden celery crown,
The king of birds is he.

Long live the glorious gobbler.
With his attendant pies,
Mince, pumpkin, apple, cranberry,
And each of generous size.
Of all famous monarchs
From Ecuador to Spain,
He is the only one who boasts
An undisputed reign.
—Minna Irving, in New York Sun.

ALL ABOARD FOR THE FURNI- TURE ISLAND

(Concluded.)

"Of course I could be and I am—
only I'm not contrary. That's put in
to make it rhyme. Did that silly
dandelion tell you why we couldn't go
in?"

"It's because we have such homely

ished floor a group of clover maidens
in old rose fringed suits were doing a
dance.

Around the great room, close to the
walls which were hung with tinted
satins, were small three-legged golden
tables with chairs to match, and in
the chairs the lovely flower ladies
were sitting, munching bits of frosted
cake or sipping daintily from goblets
of nectar. The Daffodils were on a
stage at one end of the room. They
were still playing gayly, the notes of
the violins blending softly with the
strains which arose from a great many
gilded music boxes which were scat-
tered about the hall.

One of the pink and white poppy
girls who had drawn back the cur-
tains—there were two of them just
alike—showed the twins and Mary to
the nearest table. She seemed quite
afraid that the other flowers would
spy Mary, and perhaps it was just as
well that they didn't.

After the clovers had finished sev-
eral beautiful goldenrod ladies with
very fuzzy hair did a minuet but
Mary and Janie and Jennie were al-
most too busy to watch, for one of
Dandy Lion's sisters—there were
dozens of them fitting about in white
caps and aprons—had brought a tray
of salad and cakes and ices in thin
flowered dishes.

The music had grown louder and
everyone had arisen to dance, when
the curtains flew back with a jerk and
in stalked Cammie with Paintetta on
his back. She nodded to the twins
who were still at their table, and then
yawned and slid down. Cammie was
chewing something very grouchy and
he frowned at everyone so that the
flower ladies scattered back to their
tables.

"Hurry up with your posing," called
Paintetta, setting up her easel in the
middle of the floor, which was now
empty. "I stopped to do the sunset
and Cammie's mad."

The three Forget-me-not sisters,
who were all at one table, put their
arms around each other and leaned
back against the satin wall to set off
their sky blue gowns. Iris Arlene—
Mary pointed her out—stepped away
from her cousin Lily and posed alone

MY THANKSGIVING

For all the garnered harvest of the year;
For golden grain of love, and hope, and thought;
For health and strength of those I hold most dear;
For goals attained through weary journeys sought;
For anxious fears removed, for faith grown bright;
For friends whose love and kindness cheer my way;
For stars above me in the darkest night,
I give Thee thanks on this Thanksgiving Day.
Yet, not for these alone, since, most of all,
I thank Thee, Lord, for what Thou hast not given—
The poison cup of fame, the bitter gall
Of fickle friendship, and the fair, false heaven
For which in ignorance I vainly yearned,
But which Thy love withheld. Now, for Thy "Nay,"
When toward these harmful things I would have turned,
I give Thee thanks on this Thanksgiving Day.—
—Gussie Packard DuBois.

names," said Janie, who didn't feel so
badly now that Mary Quite Contrary
was with them. "They are only Jen-
nie and Janie, and yours is Mary."
